I have some data which may help.
If your core is 3.5 sq inches the Turns per volt would be 1.79.
As I do not know what gauge wire you are using etc., I cannot determine if any particular winding will actually fit in the space given. If your xfmr is the size of the beast that I have (same source) you will have no trouble there. If you use the above figures you will get the correct voltages from your windings
I have done many xfmrs over the years and I developed a program in my computer to do the calculations. Be advised that the figures the others gave you MAY be right for THEIR xfmr, but theirs may have a different core area etc. which changes everything.
If you require a fuller calculation for your winding, please e-mail me direct at parrfo@sympatico.ca with voltage, current required for each winding & I will e-mail the results to you asap
Regards
Jack Parr

If your work is going to be network based and TCP/IP is the transport (or one of the transports), you may want to have a look at some of the RFCs related to realtime enhancements to and layers on top of IP. Many of the hard design issues for realtime-over-networks have been addressed. Audio/video streaming over IP depends on it, of course, as does IP-based video-conferencing. For example, I take care of video-streaming servers which are RTP-based. See the IETF workgroup web pages for audio/video transport at http://www.ietf.org/html.charters/avt-charter.html

As another example, remote videocamera control over IP has been done for at least 3 or 4 years in experimental settings. Also have a look at the IETF workgroups for quality-of-service issues at http://www.ietf.org/html.charters/rsvp-charter.html

I'm need some help
I have been using the Drake c-line for years.. I like the gear very much.. the receiver is great....
But I am considering getting the Ten Tec Omni VI PLUS... Wonder if anyone out there would tell me what they think of their Omni (6) plus.. Sure would like to get comments from owners esp. those who have or had the great Drake C-line for comparisons..I am not interested in the ease of operation , no tune , push button controls... etc..but just comparing/info on the quality of the Omni receiver etc...
thanks tim

There is a web site www.harbach.com
This fellow has a drop in replacement for the power
supply...everything but the transformer. I did this to my SB=200
about a year ago. Price was under $100. He also markets
a soft start...to give some delay to the power on to enhance
tube life. He also has an optical isolator to couple the
exciter/transceiver to the amp. The SB-200 was designed when tube
exciters were the rule. Modern tranceivers are not normally built to
switch the voltages and currents needed to switch from send to
receive. This optical isolator solves that problem. It took me less
than two hours to do all three modifications. He has similar products
for the SB-220

I can't speak on the VI plus, but the earlier versions of the Omnis were
great for CW and it particular full break in.

I had several different versions through the V set up along side the C line
and prefered the Omni.

On this particular item the term Cavity is correct. It is one
of 4 or 6 cavities in the Duplexer. the subject line I found
somewhat confuseing as this single cavity in NO way
constitutes a duplexer.

Just my opinion

Man, there's a bunch in the clear on C-band.
It wouldn't be pratical to schedule watching them because they are both
erratic and just a shot here and there.

>
> Some old satellite 2 GHz TVRO receivers with the big dishes (The older
> ones - the newer ones fell under the EPCA.)

Many of the newer ones have the ability to monitor at least some of the
subbands without having to hook to a jack out the back.
had a subcarrier output jack

> that had some interesting stuff on it that you could listen to with an

Pretty much not much, without a bit of cut and try.
BTW, if you want one of the older setups, and add in the local paper can
quite often get you a complete set up for $100 or less. Some are available
for the removal.

>
> Some cable systems have strange subcarrier stuff running around too.
>
I kept my C-band because I qualified for the networks through grandfathering

but they won't let me take that to a Ku band setup, such as the Dish, or any other DSS system.

Usually I can find a station that "doesn't" have football, basketball, baseball, or championship wresteling.

I'm not much of a "spectator sports" fan. <:-))

Uh, it's not up for us to decide really. It's the rules of this NG. It's
been stated plenty of times that the "SWAP" NG is the place to sell
gear. This NG is not for sales of gear, it's for discussion of gear, and
other technical problems. Thats why in a earlier post, I wonder about
the reading skills of the offenders. Now why people can't use the swap
NG for sales is beyond me. That is what it is there for. Why do these
people have to post it here also? I've got my theories, but I won't go
into that. Heck, I can handle an occasional post selling something, but
the people that post multiple posts every frigging week of the year

nearly are !@#$*$^$.
^#*#%@@(.) Well, you get the message. MK

This is utter crap. FRS hardly goes a mile on average flat ground, so I'm kinda hard pressed to believe that it's "crowded". Maybe if you go to an amusement park or something where everyone and their brothers uncle is carrying one, but in most places you're lucky to hear what sounds like the entrails of someone elses transmission on like 2 of the channels. With CTCSS it becomes even less "crowded".

Businesses everywhere are using FRS for the type of things the poster described, and it works patently well for "better" short range communication than typical 49 mhz units. (FRS gets a few thousands of feet whereas 49 meg is lucky to go 500.) The units are cheap and the

batteries last forever, too.

I recently got my tech license and was wondering if anyone could offer good suggestions on web retailers they have used that offer good prices and that were reliable shippers. Also, any information on reliable manufacturers or retailers selling refurbished equipment is appreciated. Thanks.

4409. 5 people share 2 home phone lines

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-07 00:00:00 UTC
From: Richard Chi <Chi300@hotmail.com>
Message-ID: <Xgtj5.4124$uDc5.98763107@news.randori.com>
Source record: 74010

Sorry if I put to the wrong board but I know most of the users here are
expert
I hope my questions could be solved and receive some answers from here

If I have 2 phone lines at home but we need to have individual handset for
every body (5 people live here)

Is there any product could satisfy my need?
So when one line is occupied, the other could use the same handset to use
the other line for the call.
The 3rd could join the call as a conference call any time. Even the 4th or
5th could, too.

Where I can buy those product and who should I ask for suggestion?
Is there any professional on line phone equipment stores or web sites I
could turn to for suggestion?

I've checked many stores but I found some provide 2 line features and some
support up to 4 handsets
None of them support more than 2 handsets with 2 line in function.

Sorry if I put this wrong on the cell section and kindly reply me if there
is a suggestion!!
Thank you in advance
Regards,
Chi

4410. Re: Kenwood vs. Yaesu

>recharging the batteries on that model done in the similar way?

That jack on the FT is a general-purpose DC input. It provides power to
the radio as well as for charging the battery. The current regulator
for charging the battery is built into the radio.

If you have the 12 V cigarette lighter cord, or some other source of
6-16 V at about 2 A, you can connect it to that jack on the radio and
then use the radio with no battery at all. The "wall wart" charger
only provides a couple hundred mA, so you can have the radio turned
on and receiving while charging the battery, but don't expect to
be able to transmit this way.

Anyway, the advantage of doing things this way is that the battery
packs are simple (no electronics at all), and the same jack on the radio
provides operating power and battery charging. The disadvantage is that
you can't charge the battery without a radio.

There is a way around the latter problem, too: the CA-15 charging stand.
This is sold as a Vertex (commercial radio) part, but fits the FT-50
just fine. You connect the wall wart supplied with the FT-50 to
the CA-15, and then drop the entire radio, or just a battery, into
the CA-15. It charges the battery through the contacts on its bottom.
The current regulator is built into the CA-15. It's convenient, but
has a different disadvantage - it only supplies enough current for
charging the battery, so you need to turn the radio off while charging.

4413. 4cx800a & 4cx400a MP

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-07 00:00:00 UTC
From: w4th@webtv.NET
Message-ID: <17854-398E833F-4481@storefull-104.iap.bryant.webtv.net>
Source record: 74014

I have a MP of Svetlana 4cx800a tubes. These tubes have never been used. They are Russian military surplus tubes and were made to very heavy duty military specs. These tubes will produce as much wattage as any pair of 4cx800a tubes sold by any distributor, period! They do have a warranty. The price is $200.00 plus shipping of $10.00 to anywhere in the lower 48.
I also have a set of the 4cx400a tubes. These tubes have also never been used.
The price is $180.00 plus $10.00 shipping.
For you MLA-2500 owners, there are a couple of good articles on the Svetlana web site showing how to replace the expensive and nearly impossible to find 8875 tubes, with either the 4cx800a or the 4cx400a tubes. Just go to their site and look under the Technical Bulletins section. They also have an article on replacing the 8875 with the 3cx800a7 tube. But had you rather pay about 350 bucks for one of the 3cx800a7 tubes, or 200 bucks for a pair of the 4cx800a or 4cx400a tubes?
Thanks for your time.
There is a link to my tube page at the end of this message that should answer most of your questions about my tubes. Feel free to contact me direct at my email address.
Thanks for your time.

Some people love 'em - some people hate and distrust them - my personal opinion is to avoid HRO (Ham Radio Outlet). Do a Deja News search for HRO and you'll find many many complaints and allegations of selling used and broken merchandise as new and customers being lied to and treated rudely.

It's also best to take any 'advice' they give you with a grain of salt as their number one consideration is what equipment has the best markup on it right then, rather than what is actually best for your situation. I've was flim-flammed several times into buying gear that was not suited to my needs until I wised up and went to Texas Towers and got straight information.

Just my experiences - I'll never spend another dime with HRO.

Jerry

There are lots of rigs out there. I would suggest you talk to the folks that are administering your test session. They can let you know what the schedule for upcomming hamfests in your area is. If you can go to a hamfest with an experienced ham, you will stand a better chance of getting a good rig at a fair price. Also one of them may have something that you could borrow or buy.

Come on over. HRO in Woodbridge would be an easy drive (not really
such a thing in the DC metro area). From Waldorf take Rt 228 to
Indian Head Highway (Rt 210). Take Rt 210 north to the beltway
and take I-495 west to I-95. Take I-95 south to Woodbridge.
For a accurate map check out http://www.hamradio.com/ for
a map and phone numbers.

Also, I don't work and I am no way connected to HRO. Just a
happy customer from the Woodbridge store.

From Waldorf get on 95 south, cross the Wilson Bridge into Virginia, take the 95 South exit off the beltway to Woodbridge exit. Take US Route 1 south through Woodbridge to the south end of town. You will see a industrial looking shopping center on the left. It looks like it might be a rental storage place. Ham Radio Outlet is on the second row of buildings. If you start seeing wooded area after the business section of town ends, make a U-turn, go back to the last signal light and turn right, make your first left and HRO is on the right about 2/3 down the building. Watch the speed bumps. DON'T do this during rush hour!

No, but you can get some simple HT for business use and get a simple commerical license, application useally included with the radio. There are also UHF equivlent. The only license free is of this type is 49 MHz, about .1W, FRS 468MHz, about .25W, CB 27MHz 5W, and GMRS 468Mhz 50W license required (operator license requires no test).

I am in the process of winding a transformer for a HB project. I thought I remember reading and doing 2 wraps per volt as a teenager. Checking the internet, I saw one place advertising for sale transformers with 1 wrap per volt. I have two ARRL Handbooks (older). One says 5-7 wraps per volt, the other says 6-8 wraps per volt. The transformer has a center core section of about 3.5 sq inches and about 2 inches deep. The reference in the handbook was 1 sq inch.

I would like to do 5 wraps per inch, but I don't know it I have enough room for that with the 5 winding I am putting on the transformer.

Spec.
600V secondary B+
250VCT secondary low B+/bias
117V primary
6.3 filament

350W ICAS

Core is an old transformer out of a 500W microwave oven.

Many thanks

Dennis WB3KUM/9

It is a 50 ohm - 25 watt.

4435. Wanted: air variables, turns counter, balun

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-07 00:00:00 UTC
From: k5dh@raytheon.com
Message-ID: <wdCj5.41$qz3.4858@bos-service2.ext.raytheon.com>
Source record: 74036
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

I'm building a 1 KW antenna tuner along the lines of the Ultimate Transmatch from the ARRL Handbook. I'm looking for two big air variable caps that'll handle 1 KW or better, with a maximum value of at least 300 pF, and preferably more like 400 pF. I also need a turns counter for my roller coil. Nothing fancy, but something usable. Lastly, I could use a toroidal 4:1 balun. I could buy a set of cores and some insulating tape and wind one, but it would be nice to find one already made, perhaps from a commercial tuner that someone is junking out.

RPC is hardly an conventional API. RPC is a real pain to use and the
Unix
RPC is different from WinTel RPC.

>
> > 2. Must be loosely or tightly linked with the application

I agree!!!!! That why I don't think they should be linked with the
application.
Having a stub object detaches the API from the application. This keeps
"clever"
programmers from by passing the API. Different thread will comment
later.

> > 3. Language restrictions.
>
> Nope. As long as the INTERFACE, meaning the size; type; and sequence, of the
> arguments, and returned data are published, you can use almost any language
> to access the API.

Not always. Try calling a Java object from C++. I do agree in a lot of
cases
it is possible, but not always clean. JNI is an example of a fairly
dirty
interface layer.

Leland, I am not sure if this is the best place to air our disagreements
(may be too strong
of a word as most of the time I find that I really agree with you but
just
looking at the issue slightly different).

Unlicensed, no. There are several low-power frequencies in use that require no or little coordination, so it's simply a matter of filling out a license application and sending in some money. Radio shack and other outlets sell HTs on these frequencies, primarily 151.625, 154.6 and 154.57. You will hear alot of activity on these frequencies in areas, and will seldom here a callsign used.

Real time is somewhat of a special case. The solution however isn't
to make a end run around the API, but to create a new set of real time
APIs. Anything else is leaving the appl programmers out to dry.

You have to know the flux density and core cross sectional area in order to calculate turns per volt.

If you are going to use the original primary winding on the microwave transformer, try winding ten experimental turns over it and see wht voltage you get. Some calculating will tell you how many turns per volt. If you're going to strip the core bare, count the primary turns as you take it apart. #turns/120 will equal turns per volt.

Source record: 74088

False! What you get out of any reasonably priced UPS is an approximation of an AC sine wave. The APC UPSs meant for computer work produce a "stepped" sine wave. If you looked at it on a scope, you'd see the steps. So, while the AC could be considered to be "conditioned" and "clean" when it comes to surges, spikes, etc., it just isn't a pure sine wave. I've never attempted to power a receiver or preamp from one, so don't know if you'd end up hearing garbage from the stepped sine wave.

Normally, the equipment plugged into the UPS is running off of the AC line. When the line voltage falters or disappears, the battery/inverter kicks in and powers the devices you have plugged in without missing a beat, i.e., there's no voltage drop seen at the devices. In the reasonably priced UPSs, the battery can then power the computer or whatever for some number of minutes, in the 10-30 range usually. The idea is to be able to survive the power outage long enough to gracefully shut things down. An APC UPS such as the BK500MC can put out 500VA or 330 watts for the period I mentioned. For that, you pay $129, discounted at Staples.

Are you sure that you're getting garbage off the AC line? I notice your ham call - are you having RFI problems from your own station? I'd say that 90% of such problems are caused by the RF getting into the preamp or amplifier via other means, such as through unshielded speaker cables. If you live very close to a broadcast radio or TV station tower, it may be necessary to use AC line filters as well as ferrite chokes on all low level interconnect cables as well as on the speaker cables. A good external ground on the audio system may also be necessary. Be aware that all such problems are not solvable for all audio gear.

Subcarriers are "common carrier" like the wired telephone/telegraph [do they even still exist] and commercial satellites. While very few seam to know and even less care,it is illegal to intercept any common carrier unless you are an agent of the coampany [/ies] providing the service [for routine monitoring and control] or a member of the FCC.

4459. /\/\otorola SABER 1 "R" UHF, Securenet /ruggedized / submersible

Newsgroup: rec.radio.amateur.equipment

Source record: 73850
Cross-posted to: alt.ham-radio.marketplace,alt.ham-radio.vhf-uhf,rec.radio.amateur.equipment,rec.radio.swap

Hello all, I have a UHF Saber 1 "R" Securenet, H44QXN7139CN. Radio is an easy "9" condition and is in perfect working order. Factory Mutual approved for hazardous locations and has a FM Hi-Cap battery as well. 12 channel capacity, presently programmed on a wide range of amateur and commercial frequencies (442 to 462) with NO problems. I have no reason to believe that the Securenet module is not in the radio, although I have never used the encrypted mode.

This is supposedly the radio chosen by Navy SEALS and other tactical users due to submersible / ruggedized ratings.

The package includes wide band antenna, a mint condition Motorola NMN6128C speaker / microphone, One good Motorola NTN7058A FM / gasketed battery, and TWO chargers....a Motorola "porta - pocket" slow charger, and a W&W associates desktop charger that uses the same transformer as the porta-pocket. The porta pocket is great for travel or vehicle use, if you add a simple car cord.

I'll program the radio to your specs, ship and insure it for $425.

reply to my e-mail address, NOT to the newsgroup, please.

thanks and '73

Joe Davoli

Yes, but.....The implementation made at Ohio State Univ. which I saw
a few years back was actually part of an H.263 videoconferencing stream
with camera-control add-on (assuming my memory is reliable), so the full
data stream included realtime video feedback (MPEG1 if I remember) and
audio channel. Obviously this is closer to realtime radio control
requirements.

I believe that the IETF RTP website which I mentioned above has some
drafts on videoconferencing payloads on top of RTP. Also, I should have
mentioned the IETF diffserv workgroup which studies the quality-of-service
issues which will be important for realtime commodity-internet (as
opposed to realtime radio-shack-intranet :-)

One can't claim that RTP and RSVP will necessarily dominate realtime IP in
the final analysis, or even that realtime IP itself will dominate. It's
going to take a while for the dust to settle. I just wanted to point out
that public standards and vendor implementations of RTP and RSVP do exist,
and that it might pay to build on that previous work.

This is very interesting stuff and I would very much like to see us
get to the point of using RTP, but I think it will be awhile. I like
CORBA and RMI, but they will haven't matured enough in the PC space
to make them workable yet.

I would like to suggest that the goals of SDAR be as follows:

1. Conventional API Standards Spec and code created with distributed
concepts in mind.

a. Radio Control Standard API
b. Log file format API
c. Rotor control
d. Digital Keying both CW and Voice
e. DSP

2. Convert the above API into a distributed system such as CORBA, RMI,
COM,
DCOM, XML-RPC or RPCs.

3. TBD

Of course much of this could be done simultaneously. The two important
things
for me is that it remains Open and OS independent.

>but I believe it has 4-pins.

Norm,

The TS-820S will work well with a Kenwood MC-50 (which was the matching
mic for the 520/820 series), an Astatic D-104 on a "G" stand (without
the preamp), or a Shure 444D. I'd stay away from preamplified CB-type
mics, however.

Source record: 73856

Hi All!

I'm looking for a top range receiver to use with a number of
transmitters I have here, it must cover
all the ham bands inc warc bands and general coverge rx too if possible.

I'm not looking for the latest all singing all dancing, has lots of
knobs and buttons and flashing lights receiver, but
one that is just an excellent receiver even if optional filters are
required.

I've seen advertised the Drake R8B and JRC NRD-545 both being billed as
the best rx on the market.

So, does anyone in the NG own one of these receivers ?
If so, can you let me know what you think of it ?
How it performs compared to other receivers you've had / have ?
How easy it is to get it to work along side your transmitter ?

Please reply to group and directly to me as the news doesn't always make
it to the local server !

Cheers!!

Hello,

We need some help trying to locate the COS (Unsquelched indicator) on a Radio Shack HTX-404/202. I are going to try to use this HTX-404 as a link radio and need COS logic. I do have the schmatics for the HTX-202, but I am not sure exactly where to pull COS.

Any help would be GREAT! Please e-mail me or call me.

E-mail: radiotek@pacbell.net
Phone: (661) 272-6949

Thank You & 73,

Message-ID: <8mpsck$c6d$1@newsg3.svr.pol.co.uk>
Source record: 73863

First item looks like a low-pass filter. Best way to check is by connecting
a signal generator to one end and an RF-voltmeter or oscilloscope to the
other end, or a general coverage receiver with S-meter, to measure its
frequency response.
Second item is RF sensor for SWR-indicator, pick-up wire usually has a
carbon terminating resisor to ground at one end, with a diode (rectifier)
and decoupling capacitor at other end to drive a meter indicator.
73 Denzil G3KXF.

Maybe, maybe not. Not that it makes any difference.

>few seam to know and even less care,it is illegal to intercept any
>common carrier unless you are an agent of the coampany [/ies] providing
>the service [for routine monitoring and control] or a member of the FCC.

Nope. Satellites reception is specifically allowed in title 18 as long
as the signal encoding is readily available to the public (definition
in the title).

Radio broadcasts have long been treated differently than wires, as any
casual perusal of title 18 will attest.

Please back up your claims with the relevent law. As I posted
previously, I haven't been able to find it, so your further repeating
of rumor is useless without facts to back it up.

Source record: 73869
Cross-posted to: alt.ham-radio.marketplace,alt.ham-radio.vhf-uhf,rec.radio.amateur.equipment,rec.radio.swap

A individual pointed out that the model numbers on my radio DO NOT indicate that it is SUBMERSIBLE! The SABER "R" is indeed a ruggedized, heavy cased version of the Saber, has an "O" ring about the battery, a unique method of securing the battery (push-button slide clamp,) but none of these features are reflected in the model number.

The radio IS high power, clear and secure mode, 12 channel with no keypad. Present bandsplit is 440 - 470 MHz. This radio is clean and tight.

Thanks for reading,

Joe

In coming back to amateur radio after a many-years absence, I made my first contacts this past weekend on 20 meter cw. I've been listening and getting my ear back for a week or two and it really is a language, once you get up there in speed 15 or so, it's much like hearing words rather than letters or individual dits and dahs. It feels great to be back.

For those interested, I was first licensed in the mid 60's when you had to pass 5 wpm for a novice (there was no such thing as a no-code license). I was very active back then for 10 years or so on cw primarily and later I got up my speed and passed the extra. I guess cw is just in my bones, I really have no desire to pick up the mike or even tune to the higher end of the bands. (though I have no problem with those that do, etc. to each his own)

Best Wishes,
CW Forever!

I'd like to see a chapter and verse quote on that one. The FAQs around
the net and the companies selling SCA receivers and modifications don't
seem to agree with you. Radio Shack even used to sell one, maybe still
does (I haven't checked lately).

http://www.toltbbs.com/~bhammond/sca.htm (FAQ)
http://clients.dialnet.net/scsradio/ (kits and FAQ)
http://members.aol.com/fmatlas/ (radios, faq, stations w/subcarriers)
http://www.ldsradio.com/howtolisten/0,5499,4,FF.html#fm (mormon church)

The source of most of the "it is illegal" rumors are typically the
service or equipment providers who don't want consumers listening
for free. While it is illegal to play music or other copyrighted
works in public without paying royalties, such is not the case for
non-business, i.e. personal use.

Are you affiliated with said providers, or just repeating rumours?

Yes imagine my surprise. FAQ's on the 'net in conflict with law.
Radio Shack not only used to sell one, but they published schematics
for do it yourself receivers, and included legal advice on their
use. All of that was before the revision of the communications act.
Which specified that signals that were not for general reception by
the public, as SCA are not, are illegal to monitor without
permission. In the case of SCA specific language was applied.
Someone posted a paragraph earlier in this thread, maybe you can
find it.
I also own the ART/Sci series of technical manuals delineating,
among others, cell restoration mods for various receivers. Published
in 98, it's clearly in violation of ECPA, and yet, it shows up all
over the place.
Just because someone provides technical data, or hardware for a
purpose, doesn't mean it's use isn't illegal.

Of course there are those who will argue to the contrary. They
are entitled to be wrong.

For the most part unenforcable, but still illegal.

Yes, that's what Napster said, too.

SCA is not a matter of royalty, but in many cases, of
subscription. Of the stations that I have worked carrying SCA
transmissions, several carried telemetry between the transmitter and
the studio on their SCA subcarriers. Unauthorized monitoring of this
is illegal, as it is priveleged information. Usually digitally
encoded, which is clearly specified as protected from unauthorized
monitoring under the law.
Of the stations not carrying telemetry on their SCA, several
stations used their subcarriers to provide programming services.
Physicians Radio Network was one. Assorted music services,
datacasts, weather services were examples of others. These were by
subscription only. Unauthorized use of any kind, even person use, is
theft of service. Again rarely prosecuted. But specifically illegal.

One network I worked with, a state public radio network used the
SCA subcarriers to carry remote studio backhaul, and remote studio
communications, to the main studio at the flagship station. These
are specifically protected by the revised communications act, and it
is illegal for unauthorized monitoring under any circumstances.
>
> Are you affiliated with said providers, or just repeating rumours?

Nice shot...but neither. I work with the carriers who apply the
SCA to their signals, and specifically, monitor, and measure, SCA
transmissions on them.

I've heard some good suggestions and the one I like the best is ask the hams around the test session..The local ones.

Twer it me just starting out, I'd keep it relatively simple and inexpensive. There are lots of old tube rigs out there where the transmitter and receiver are seperate, *but* the price of tubes is going out of sight and the more common ones are starting to get scarce

If you go that route try to find several of each type of tube for spares and keep them safe. <:-))

Most of the Kenwood and Icom rigs from the last 15 years are pretty good. If you plan on doing a bit of CW, make sure that they either have the CW filters installed, or that they are still available. However for casual use, you probably don't need a full compliment of filters.

Of the older rigs several of the nicest I used were the ten-tecs. They were full breakin and worked great. I think they can be found for pretty reasonable prices. They are plain looking, but work well. Also the external audio filters seem to work very well on CW for most any rig when properly adjusted.

> >
> > I checked at eBay, but don't know how the prices are there. Seems like
> > there is a bunch of Kenwood units for sale.
> >
I'd be a bit careful of using e-bay for representative of prices. Actually, I'd be a bit careful of e-bay. <:-))

Again, talk with the local hams and ask their opinion. they may or may not be correct, but hopefully they will be somewhat unbiased (unless they have a rig for sale) Hams are notorious for thinking their old boat anchors are still worth nearly what they paid, or more than that if the rig is old as it is now a collectors piece <G>

Don't be in a hurry. Look around and maybe even visit a swap or two with some of the local hams. If you show them something and they start thinking about buying it if you don't, I'd take that as a positive sign. <G>

> Sub-carrier... (technical background)

A frequency used to modulate a carrier wave that is itself
modulated.

99.5 MHz is modulated by 67khz. 67khz is modulated by a 8k audio
channel. 67khz is a subcarrier of 99.5.

FM Stereo uses a 38khz amplitude modulated subcarrier to carry the
difference audio for the stereo stage, L - R.
> Ku
> C Band
spectral allocations in this instance satellite spectra.

> PRN...

Physicians Radio Network, a subscription service carried by
SCA(Subsidiary Communication Authority...authorized programming or
communications service applied to a subcarrier on a broadcast FM
signal) in many markets, for doctors and medical practicioners.
Surgical developments, medical news.

> ...(all good stuff)

composite clipping: hard limiting of total modulation, (all audio,
subcarriers, stereo pilot) of a broadcast signal by clipping of the
total modulation, rather than gain reduction of the offending
component.

Baseband: the modulation component of an FM broadcast signal
below 15 khz carrying audio.

Does that help?

A straight key you must make the characters and keep the proper timimg yourself, manually. Just like in the old western telegraph days. An iambic keyer lets you use a paddle to key the keyer. The keyer makes dots and dashes automatically, and also has a dot- dash memory. This lets you have a bit of slop and still send perfect characters. It's much easier to go fast using an iambic keyer. And also generally you will send cleaner code also. A straight key you push a lever just like in the old days. A paddle you key sideways. Normally, the left paddle sends dits, the right dashes. This can be reversed for lefty's etc. You can use a paddle in two ways, much like the old "bug" where you kind of side slap the paddles , or you can squeeze the paddles. The squeeze method is really the desired method to use, if you can master it I think, but doesn't really matter much as long as you are comfy. Myself, I tend to side slap like a bug user, but I can still send 55-60 wpm, so I couldn't be hurting too bad using this method. I never could really get used to the squeeze method. Probably because I used a bug for a short time between the period I used a straight key, and then the iambic keyer and bencher paddle. The bug was a great improvement over a hand key, but I prefer iambic keyers much more. The bug is only auto dot's, not dashes. You had to side key the dashes manually, and many people develop a "swing". This is where your dots and sent at a different speed than your dashes. Normally, one dash should take the same amount of time as 3 dits. Some would get in the habit of sending a slow dash, and then three fast dits for say the letter B. You won't have this problem with the iambic and it's dot dash memory. I recommend a straight key to start with. It helps develop timing much better as you have to do it all yourself. After you get about to 10-13 wpm or so, I recommend going to the keyer. MK

I think you are wrong. I've read a lot of law and bills related to
stuff like this, and found nothing. Many people have long believed
that receiving SCA was illegal (Muzak folks spread that rumor for
years) but it never has been unless things have change in the last few
years. If it has changed, post it. The current USCode on cornell
doesn't make it illegal:

http://www4.law.cornell.edu/uscode/18/2511.html

>Someone posted a paragraph earlier in this thread, maybe you can
>find it.

I can't find a reference either on my news server nor on Deja. I do
find lots of places where you claim it is illegal, but no cite. The
closest was an old thread from last March containing a quote from title
18, but even that quote specifically is about satellite transmissions,
and says it is OK, "unless the conduct is for the purposes of direct or
indirect commercial advantage or private financial gain."

>among others, cell restoration mods for various receivers. Published
>in 98, it's clearly in violation of ECPA, and yet, it shows up all

That is not illegal either. FCC regulations make it impossible to
import or approve receivers of cell frequencies, but publishing
information about how to build them, owning such receivers and even
using them is not illegal. It is illegal to disclose what you hear...

> Of course there are those who will argue to the contrary. They
>are entitled to be wrong.

As are you.

>> The source of most of the "it is illegal" rumors are typically the
>> service or equipment providers who don't want consumers listening
>> for free. While it is illegal to play music or other copyrighted
>> works in public without paying royalties, such is not the case for

>> non-business, i.e. personal use.

> Yes, that's what Napster said, too.

Not hardly. They claim to not be performing. And so far, they are
correct. Or hadn't you heard "innocent until proven guilty"?

> SCA is not a matter of royalty, but in many cases, of
>subscription. Of the stations that I have worked carrying SCA

Doesn't matter. I have yet to see a law enforce subscriptions of "in
the clear transmissions" unless you try to make a profit from it.

>transmissions, several carried telemetry between the transmitter and
>the studio on their SCA subcarriers. Unauthorized monitoring of this
>is illegal, as it is priveleged information. Usually digitally

Again irrelevent. The law forbids disclosure and profiting but
not monitoring. Unless you have some new information...

>encoded, which is clearly specified as protected from unauthorized
>monitoring under the law.

What law? Where are you getting all this crap? (Even if it is law, it
is still crap.)

> Of the stations not carrying telemetry on their SCA, several
>stations used their subcarriers to provide programming services.

Yup.

>Physicians Radio Network was one. Assorted music services,
>datacasts, weather services were examples of others. These were by
>subscription only. Unauthorized use of any kind, even person use, is
>theft of service. Again rarely prosecuted. But specifically illegal.

Not hardly. The service isn't in the signal. The service is in use of
the information IN BUSINESS. Personal monitoring is NOT USE.

>> Are you affiliated with said providers, or just repeating rumours?

> Nice shot...but neither. I work with the carriers who apply the
>SCA to their signals, and specifically, monitor, and measure, SCA
>transmissions on them.

Sounds like you are part of the party to me. In any case, without the
law you are just repeating rumors. Perhaps your carrierx try to sell
such services by claiming they are legally private... But they aren't.

4503. Re: Help winding a transformer

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-08 00:00:00 UTC
From: Harry Lippitz <johnsmith@microsoft.com>
Message-ID: <8mod75$u3$1@newstoo.ericsson.se>
Source record: 73980
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.amateur.homebrew

This is a complete subject in itself, and soon to become a dead art! To wind a transformer, there is a formula (that I have forgotten) for calculating the total power capacity of the former/laminations you have. If that is big enough then it is safe to continue.

Calculate the wire size you need for all windings to take the currents (using another formula that I have also forgotten), then using the wire data, calculate how many turns/volt you can have for the former winding area you have. There is a range of flux density that you can assume, if you do not have data for the iron core material you have. You can also check the turns by putting the number back into the formula and checking you have the right former area.

As long as the former winding area is the right size, then you will have the right number of turns/volt. I will see if I can bring the data to work tomorrow and give you the info and formulas and tables you need. I have wound loads of transformers and all "run cold", but in the meantime you can take your laminations and clean/laquer them so they are insulated from each other when you assemble the former again. One of the big problems with re-using transformer cores is the eddy currents caused by laminations shorting together. This is one of the main causes of the transformer buzzing and getting hot.

If you wish, I will see if I can scan my lab book and e-mail you the pages, but it is all hand-written. No promises; I am rather busy at the moment having just moved house. When you buy a house, you don't buy a home, but another full-time job!

It's obvious that you intend to dismiss based on my involvement in
the industry. So resolution and understanding is not going to
happen. I'll leave you to your confidence in that case, with this
caveat,...SCA transmissions are't "in the clear," by definition, and
subscription services monitored without a subscription agreement is
theft of service, by definition. That's business, or personal use.
Subscription is subscription, the right to listen is sold...to
listen to a subscription service, even in the privacy of your own
home, is still theft of service.

But, by all means, you be comfortable.

This install sugestion is elaborate, but worth while if you wont to protect your equipment and your vehicle. This also adds the benifit of opperating with your ignition and motor turned off.

Purchase a quality battery, a dry cell or gell cell is ideal, especially the marine type that can handle being drawn flat dead and recharged without any problems. Install a battery isolater ratted around one hundred and fifty amperes. Connect your power cables to this new battery, be sure to fuse both your power and ground cables. Do not forget the ground from frame to battery. Connect the isolator to both of your batteries and then to your alternator. For added protection against line voltage drop you can home build a capasitor pack, the larger the pack the more voltage change at high current it can handle using appropeitly ratted parts.

Not, your radios are isolated from your vehilcle electrical system and the only interference possible is from RF. Propperly sheilded cables will take care of this aspect. Best of all, now you can opperate without burning up a tank full of gas!

Opperating time is about and hour at full power and steady use. Charge time, as long as it takes to get where you are going. I run this set up in my 98 Ford F-150 without any faults.

Source record: 73988

A straight key is the standard, up/down key that most people associate with Morse code.

The are several side to side type keys. An Iambic is used with an electronic keyer and has two paddles. One for being used for the short pulse, dot or dit. The other being used for the long pulse, dash or dah. If one paddle is held, the keyer will send out a string of pulses related to the paddle as long as it is pressed. If both paddles are pressed together and held, then the keyer will alternate between the long and short pulses. Also, it one paddle is pressed and sending a series of pulses and the other paddle pressed momentarily, it will insert a related pulse in the string of pulses being sent out.

There is a single paddle that similar but you lose the alternating pattern and the insert modes.

Finally, the are the mechanical "bugs" that can generate a string of short pulses by way of a pendulum function using a spring and counter weight. Long pulses are done manually.

Bencher and Vibroplex are two of the larger sellers and there should be information on the product lines.

Source record: 73992

Estate Sale
Not posted on ebay (yet).

Heathkit SB-301 Looks like it is in great shape. I turned it on and hear things (after it warms up) so I guess it is working.
Cabinet has ben repainted to original Heathkit color (kinda..very close paint match).
Picture is at http://members.aol.com/ncaddis/ebay/sb301f.jpg and http://members.aol.com/ncaddis/ebay/sb301r.jpg
How about $100 + shipping?

Also, Heathkit DX-60B. Pretty good cond. Untested. Couple of holes in top of cabinet with labels for tuning. Some xtals in rear sockets.
Pics at http://members.aol.com/ncaddis/ebay/dx60bf.jpg and http://members.aol.com/ncaddis/ebay/dx60br.jpg
Make offer + shipping.

Sorry, This one is on ebay: Heathkit SB-200 Amplifier. Original - unmodified (best I can tell).
Wired for 115v. Includes owners manual and brand new spare meter.
Owner said it works, however I have not tested. This was a spare amp that my friend had but he is now a silent key so it is part of the estate sale.
Go see at: http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=403501390
Sorry of the url doesn't work. (I'm using AOL...ugggghhhh)
You can go to SELLERS and put in my ID= ncaddis

Anyone Interested ?
All non-ebay items obo. Make offer.

73,
Neil WA5JXY

As re your "FS" items. Maybe you don't know, but it's just common
courtesy that when you put up a news item about an AUCTION, you write
FA, not FS.

I'll assume you don't know (benefit of the doubt).

The reason for this is that there are lots of folks who don't want to
read about auctions on the NGs, and have filters to hide such posts.

4519. Trouble with KAM Allmode!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-08 00:00:00 UTC
From: Holger Korioth <hkorioth@cityweb.de>
Message-ID: <39902A91.53749B04@cityweb.de>
Source record: 73996

Hi Folks!
I have here some trouble with an KAM Allmode Controller.
The KAM with itï¿½s original Firmware 2.85 works fine, an Update
with v6.1 (for the KAM without Enhancement Board) produces a
RAM error in Test mode.

After an Hard-Reset (Jumper K6) this Data appers on my Terminal

EEPROM INIT OK <= changed to 24c16
CHECKSUM OK <= the Eprom, i guess
RAM ERROR <= ?
32K RAM <= RAM size (correct!)

After changing the RAM, the same failure comes up, the Adress- and
Data connections on the Printed Board seems also ok.

Changing to v2.85 let the KAM work fine, but i need the
PACTOR Mode from the v6.1.

Had anyone the same error on his KAM and a solution to solve
the Problem?

Hi Everyone,
I am soon to be the proud owner of a IC746 and i need to purchase a power supplie,

Ive had many people tell me that Watson Power Suplies give off a loud buzzing noise on the signal when TXing.

Ive also been told to stay well clear of Switched Mode stuff, however Icom uses Switched mode in their matching PSUs, Confussed? i am.

Any suggestions with brands(and stockists) that have worked best for you would be very handy, has anyone had the probs described with the Watson PSUs....Please let me know...Also your experiences with Manson and Diawa brands.

P.S I will need to run 30A at 100% Duty cycle.
(I like a PSU that can pull more power if needed)

Perhaps I just don't choose to get into a debate about sources.
There's an old maxim..."how do you say Fuck you on Usenet?....Cite
your source."

It has been my experience that references posted by one party are
dismissed by the other especially in matters of law. But if the
dismissive party looks it up himself, they're more likely to believe
what they read.

However...in matters of radio, especially where legal limits on
reception are concerned, few enter into these discussions with an
intent to understand the law, only to justify their intent to
continue to break it, on the Grounds du Jour.
Your own posts have expressed a clear contempt for the law as
typfied by the phrase, "even if it IS the law, it's still crap," of
a couple of transactions ago, and your insistence that what is done
that is 'not for business," is legal by default. Despite the fact
that in cases where an SCA service is a subscription service, it is
clearly intended to be paid for, even for use privately in the home.

And that your insistence that my position is based in either
program supplier prejudices or rumor as the only two choices is
tacit testimony to the fact that you're not interested in the facts,
only justification for your own behaviours.

Fine. I've never had the patience to teach a pig to sing. But if
you finally decide to find out the truth...look it up,-- you can use
the same search engines as anyone else--and you can believe what is
there...because I didn't write it.

But something tells me you'll be just as quick to dismiss
it...because you really don't want to be responsible for knowing the
law.

> Tho' I'm glad that since you couldn't put up, that you have decided to
> shut up.
>

Spoken with civility I"ve come to expect from Usenet. And again
two choices of YOURs without option to acknowledge the truth.

Something I"ve also come to expect from Usenet.

He said he needed 30A 100% duty cycle and I think the R/V-S-35 series
only can handle 25A continuous. I'd recommend one of the Astron 50
series, like the RS-50A without the meters, or the RS-50M if he wants
metering, they are rated at 37A continuous. Whatever the case unless
portability is an issue I'd *definitely* go with the standard
(non-switching) type supply and for my money Astron is about the most
reliable trouble free PS of the bunch. YMMV.

Don't use the tranny from a microwave unless you can find and remove
the flux shunts. If you do not remove them, the regulation will
positively suck. Ask me, I know. I built a 400w 4CX250 amp based on
a microwave tranny. What a learning experience!!!.

In a word, go with an Astron. Whether it is a conventional type, or a switching supply, you can't do better. Just be sure to get one large enough to give you a little headroom. Personally, I have had excellent service from their RS-35M and RS-70M models for many years.

Includes manual, box, stock antenna , charger, and warranty card. The unit has some wear on the case from sliding in and of my jeans pocket but it is in excellent working condition. No mods have ever been done to the radio. It is a 3rd generation unit meaning it's serial number is 9Dxxxxxx which is the latest version.

I will include a Comet 3 band SMA-503 antenna.
$250.00 shipped and insured. USPS Money Order only.

Email if interested.

Hi Everyone,
I am soon to be the proud owner of a IC746 and i need to purchase a power
supplie,

Ive had many people tell me that Watson Power Suplies give off a loud
buzzing noise on the signal when TXing.

Ive also been told to stay well clear of Switched Mode stuff, however Icom
uses Switched mode in their matching PSUs, Confussed? i am.

Any suggestions with brands(and stockists) that have worked best for you
would be very handy, has anyone had the probs described with the Watson
PSUs....Please let me know...Also your experiences with Manson and Diawa
brands.

P.S I will need to run 30A at 100% Duty cycle.
(I like a PSU that can pull more power if needed)

Who Did you Expect? (None@dontevntry.oro) on 9 Aug 2000 11:53:56 GMT wrote:
>It will take several days to get to the law library and might not happen until

That's why the web is so great. The entire US Code is online. If, however, you can find case precedent, that would be great! My lexis-nexis search was barren but very brief (what do you expect for nothing?).

Note, precedent for illegal business use of SCA signals is common. That is a big don't care! We only care about the actual reception, not reception and disclosure. A business use, or reception for financial gain is illegal!

I was sent some e-mail, but since the sender has chosen not to post publically, their identity shall remain unknown (it was NOT the Ralph mentioned on the page). It was claimed to have originally come from an attorney to them, thence to me:

It contains specific law under which SCA interceptions have been prosecuted. He has prosecuted them himself. And has assisted Federal and other authority in prosecutions under this law.

Enjoy.

http://floridalawfirm.com/privacy.html

Given no information to the contrary, I have to assume those prosecutions above were when someone used this reception in a business or for financial gain. The law above, in spite of the "florida" in the URL, is the U.S. Code. This is simply Title 18, which I posted myself a few mesages back. It appears to have been edited specificaly for satellite reception, so the cornell reference I posted earlier is much more complete (http://www.law.cornell.edu/). As I posted then, it does NOT rule out SCA reception but only disclosure or usage in business or for financial gain. It mentions "subcarrier" in only two places, once in a definition, (subcarriers are defined as not "readily available" and once in reference to satellite broadcasts:

(ii) as an audio subcarrier intended for
redistribution to facilities open to the public, but not
including data transmissions or telephone calls, is not an
offense under this subsection unless the conduct is for the
purposes of direct or indirect commercial advantage or private
financial gain.

Again, that is ONLY for satellite, but notice the last phrase, "IS NOT AN OFFENSE..." (emphasis mine).

The key to the whole SCA thing is contained in sec 2511 1, (a) thru (e). (a) thru (e) are AND clauses. This may not be clear unless you read a lot of law, whereupon you notice that OR clauses must specify "or" and these clauses do not.

Read 18USC119.2511.1 over and over again.
It does eventually make sense!

I've done that, many times.

> However...in matters of radio, especially where legal limits on
>reception are concerned, few enter into these discussions with an
>intent to understand the law, only to justify their intent to
>continue to break it, on the Grounds du Jour.

Gee, I thought the bigger problem with radio law was on transmission!

But in any case, I have never owned a receiver for FM SCA. I have
played with one a few years ago at Radio Shack.

> Your own posts have expressed a clear contempt for the law as
>typfied by the phrase, "even if it IS the law, it's still crap," of

I have a lot of contempt for stupid laws. Like the ones which sent
Japanese Americans to concentration camps. Like the ones which
condoned slavery and those which create a class of sub-humans. Bad
laws should be ignored.

>a couple of transactions ago, and your insistence that what is done
>that is 'not for business," is legal by default. Despite the fact

That's what title 18 says.

>that in cases where an SCA service is a subscription service, it is
>clearly intended to be paid for, even for use privately in the home.

So as long as I promise not to listen to subscription SCA I am legal?

Read those subscription agreements sometime as to exactly WHAT it is
you subscribe to. The two I have seen are for two things: equipment
lease, and public performance of the signal received.

>tacit testimony to the fact that you're not interested in the facts,
>only justification for your own behaviours.

Sorry, not my behavior, just my position in regards to
the law and (un)common sense.

> Fine. I've never had the patience to teach a pig to sing. But if
>you finally decide to find out the truth...look it up,-- you can use

You haven't been reading, Peter! If you had, you would know
I have ALREADY done the "look it up". I have done web, usenet
and (with a limited imposition on a law librarian and para-legal I
know) legal searches.

I have DONE my research, and have been posting the results -- NADA!

YOU, OTOH, simply keep repeating your position ad infinitum,
with no research or effort beyond repeating rumors.

> But something tells me you'll be just as quick to dismiss
>it...because you really don't want to be responsible for knowing the
>law.

I try to be very responsible for knowing the laws. Especially radio
and computer law since I'm amateur at one and professional at the
other. You guess which one.

>two choices of YOURs without option to acknowledge the truth.

When you finally decide to read the references I've posted, or come up
with your own, I'll be listening.

> Something I"ve also come to expect from Usenet.

Yawn.

A switched mode PSU specifically designed to power a rig, will be
(or better be) heavily filtered. I have a US 80A+ switched mode
unit, designed for I know not what, which is completly clean.
£20 at Longleat. Fan's noisy though.

>Any suggestions with brands(and stockists) that have worked best for you

ALINCO DJ-580T handheld---$200

Dual band, receives both 2 meters and 440 MHz simultaneously
Covers AM (RX) from 108-130 MHz and FM (TX/RX) from 130-170 MHz and 415-470 MHz
Will also receive from 810.000-998.9875 MHz

Comes with antenna, handstrap, instruction manual, and schematic diagram
Comes with EDC-24 tabletop drop-in charger
Has EBP-28N, 12 VDC at 700 mah battery (NICAD) to give 5 watts output power
Also will give you the ESC-17 soft case (for a shorter battery than the EBP-28N).
Original box included. Will double box for shipment.

Very clean with no dents or scratches. Some wear on the ALINCO logo but key pads are clear and fine.

Asking only $200 plus shipping costs to your door.

"Adam Waterson" <adam.waterson@btinternet.com> writes:

>Ive also been told to stay well clear of Switched Mode stuff, however =
>Icom uses Switched mode in their matching PSUs, Confussed? i am.

Switching supplies have high-amplitude fast rise time transients in
the internal circuitry. IF they are not adequately filtered, they can
get out and be picked up as noise by a receiver. In addition, switchers
are complex feedback circuits and hard to fix if they ever fail. On
the positive side, they are much much smaller and lighter than a
conventional linear supply for the same power output.

Old-fashioned linear supplies have no high frequencies that need
filtering, and the circuitry is usually pretty simple. But they are
large and heavy and give off a lot of heat.

I have an Astron switching supply rated at 15/18A that I use to power
an FM rig (144/440). It's specifically designed for radio use, and
I have not noticed any problems of radiated noise. The supply has
a small fan that will come on if the internal temperature gets
high enough, but I have never been able to get the supply more than
warm and the fan has never come on. Without the fan, it's dead quiet.

Well, actually, it makes a little bit of noise if the load is too
small. Before I got the dual-band mobile, my home radio was a handheld
mounted on a MAHA "booster" amplifier. This setup draws 8 A when
transmitting but only about 50 mA during receive. The handheld also
has a "battery saver" mode that reduces the current even more, to about
20 mA, most of the time. At that very low current, the Astron supply
was switching its internal oscillator on and off many times a second to
keep the output voltage from rising, each time producing a tiny
"tick". Thus, I could hear a low-level "buzz" from the power supply
during receive, and the buzz was modulated by the battery saver
wakeup time. Just turning off battery saver mode mostly eliminated
the sound.

With the mobile rig, the radio draws about 1 A during receive, the
power supply oscillator stays running all the time, and there is no
audible noise at all.

Dave

I like to run a PSU without thrashing it, i know that it only uses 20A at 100W but we dont want to fry a egg on the PSU either, i like it cool as possible ,, plenty of leeway.!!!!!

Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

YAESU FT-10R 2 meter handheld---$120

covers 140-174 MHz FM

Has three batteries: two each FNB-40 6 VDC at 650 mah (NICAD)
and one FBA-15 battery case for four AA cells (not included)

Comes with original box, rubber ducky antenna (SMA connector),
and SMA to BNC adapter for use with BNC rubber duckies
Also instruction manual including schematics, and NC-60B wall charger.

This rig is mint and pristine condition. You will think that it has had no
use at all.

All for only $120 plus shipping to your front door. Will double box for
shipment.

ADI AT-200
2 meters (has extended coverage for TX/RX: 130.000 MHz thru 163.995 MHz)
20 channel memory
CTCSS tones (encode/decode)
Three battery packs:
7.2 VDC battery pack with 9 VDC wall charger
9 VDC battery pack (uses above charger)
12 VDC battery pack with 12 VDC wall charger (this is 5 watt battery pack)
Belt clip
Hand strap
Rubber Duckie antenna
Instruction manual
Very clean with very little wear on keys
This is a very nice rig for the money
Only $125 including shipping to your door

Follow the mic line inside of the radio cabinet to the connector on the board. Immediately in front of the connector, you'll find a cap (usually ceramic, but may be mylar) that couples the audio to the base of the buffer amp. This cap also functions as a high-pass filter in the audio range.

Check it first...if you have a lot of bass in the audio, the cap may be leaky. If people report a hum on your audio, it is likely that the cap is shorted.

If the cap is good, experiment with the value of that cap to adjust the roll-off to your liking. The higher the value of capacitance, the longer the cap takes to charge, the lower the amount of bass in the audio. Since the low-frequency portion of the wave is being used up charging the cap, only the highs get through.

That weld is the flux shunt. Look for single turn copper bands or wire, usually 180 deg. apart surrounding the core. If you can break these off, your O.K. Also a hidden shunt is through bolts in the laminations that do NOT have insulating washers, these bolts will also shunt current and increase primary current and add heat. The micro tranny may be stacked as separate "I" "E", interleave them for your project. They have flux shunts to keep the external magnetic field low, else transduce into the metal cabinet! Heat the cabinet and hum like hell.

Charlie
WA1JFD

P.S. Just what are you looking for output from your home made transformer? A Ham Fleamarket is coming up in my area and may yield some good junque?

Hello, I've just moved to a new house, wanting to get the antennas up and can't use the windows for 'plexiglas passthroughs' as these new ones are all double pane, swing in, etc..... SO... anyone have a good source for a wall passthrough, maybe some nifty trickery that can be achieved with a simple square cut through the wall or whatever? Like a commercial roof passthrough but not so big. I hate to chop into the siding though.... Maybe a better idea? something homegrown is best or no? I don't have an antenna farm and I think this could be done in the same space as a double outlet box, or maybe I'm wrong. any input appreciated.
Please email me direct!
thanks!

I once did a nice pass-through using 1" white PVC pipe... I happened to have an 18" drill-bit extension that had a 1 1/4" hole-saw mounted on the end, I had recently used that rig to drill out the mufflers on a new Harley) so I put the hole saw with extension back on my drill, picked a nice spot high on the inside wall, and near a window, and drilled right on through to the outside. I drilled at a slight upward angle; maybe 20 degrees.

Then I put a 90 degree "elbow" fitting on one end of a 10" piece of 1" PVC pipe, went outside and found my ladder so I could climb up and stick the pipe through the hole I had made. I used "Liquid Nails", a construction cement, to fix the pipe in place and seal up my wooden siding so there would be no leaks. I pointed the end of the "elbow" down toward the ground.

I gave the "Liquid Nails" a day to dry, then I sawed the extra pipe sticking through my interior wall so that it stuck out only 1/2" or so. Then I used ordinary window caulking to "cover the ugly", using a wet finger to create a smooth fillet around the pipe and fill the gap. (Yes, I used spit to get my finger wet.) I gave the caulk a couple of days to set up and dry out a bit, before using the pass-through. That's optional, if you are in a hurry. Last, I used "Coax Seal", that gooey black tape-like stuff to seal the outside of the PVC "elbow" once the coax was in place. The elbow already points down, promoting the use of a "drip loop" in the coax, so water isn't a big problem. Still, there are dust and bugs to consider.

The pass-through looked fairly official, and did a good job. I'd recommend a bigger PVC pipe/Hole-Saw combination, though, if you have more than one bit of coax to route.

Safety Tip: While merrily drilling through your wall, make sure that you are not drilling something dangerous like an electrical wire or gas pipe, or something embarrassing like a water or telephone connection. When you get through the interior wall, pull out the hole-saw and see what else you will be drilling through before proceeding any further. It hardly ever hurts to be careful, but not being careful can really hurt bad, and almost certainly will after a while. Go with the good odds and think carefully about what you are doing.

That is exactly what I need, the uP code to see what commands
it expects and what it has as output. The rest would be a parallel
to serial plus a level coverter for the interface unit.

Grounded out all the welds with a grinding stone and seperated all the E/I lams. Lost a few on each end Built a wooden form to wind all the new primary and secondaries. No, this is a good wind (excuse the pun) down project after work. I could just buy a used HeathKit HP-23 power supply for about $50.00. Building a small 6 meter linear with S2001/6146/8298 finals so I need +820V, +300V, -50V DC and 6.3V AC. The transformer I am winding orginally had 1 wrap per volt, I am considering 2 wraps per volt so the transformer should work out like this.

1200VCT 2400 wraps 26ga
500VCT 500 wraps 28ga
117V 234 wraps 20ga
100V 200 wraps 28ga
6.3V 12.5-13 wraps 16ga

Transformer was orginally out of a 650W microwave oven. Current plan is 2 6146W but I should be able to support up to 4 arranged in a semi circle so I can keep the lead length down between the tube and the tuning cap. A local electornics store also has some 12V 5A transformers wraped around a T-520 toriod core I was going to use as a choke input to the filters caps. Should provide a few heneries of inductance.

Thanks for the offer

Dennis WB3KUM/9

Hi Bill,

I've been using a Butternut HF-6V for the last 15 years with great results. They're a bitch to tune, and they need to be taken down and inspected/cleaned/tightened every couple of years, but they are one of the best performing verticals ever made. If mine ever gets destroyed by lightning or wind, I *WILL* buy another one! Mine has survived 80+ MPH winds numerous times (the WX gets nasty here in Texas in the spring); I've seen it bent over parallel to the ground in the wind, and was sure it was going to break off. When the wind stopped, it was straight up and down like normal! I am sold on it.

I am in the process of helping a buddy restore a Yaesu FT 101 series radio and would lke to know if anyone out there knows where to buy the paint. Any help appreciated.

Take the radio to an auto parts store that stocks a WIDE variety of automotive spray paint in cans. You can actually match it or come VERY close this way. I have used this method to restore many Kenwood and Yaesu radio cabinets and it works great

Source record: 73807

Hate to be a "me too'er", but I'd also recommend the Butternut HF6V - mine is ground mounted with (about) 32 radials under it and has been up for almost 10 years. Over the years, I've tried GAPS, Cushcraft, etc., and dollar for dollar the Butternut came out on top every time. The others (with all their gimmicks) are gone, the Butternut is still here.

On receive I've compared the Butternut to a 103' long wire, a 102' G5RV, and standard single band dipoles, and generally there wasn't enough of a difference to warrant saying one works better than the other - sometimes the vertical sounded slightly 'better' sometimes the dipole or long wire would win out by a slight margin, but usually both antennas were equal - there was seldom any real difference. I've kept the vertical because I like being able to turn to a band and operate without tuning, even though my current radio does not have a built in tuner.

Contrary to the other posters comments, I've never had a tuning problem with mine and have not taken it down in several years. The SWR on each band still falls right into the 1.3:1 range (or better) on each band and the antenna has been maintenance free even with the snow and ice storms we get here. I found it very easy to tune when I first put it up, and once tuned and everything locked down, the settings have stayed.

Best of luck in whatever you decide to get...

John

I have the following test equipment forsale.

All item shave been calibrated by manufacturer and are in mint condition

Keithley 2000 Multimeter with TSCAN card. Paid 3400.00 in 1998, used once

Asking 1500.00

Fluke 620 Lan Cable Analyzer Paid 995.00 last week.

Asking 650.00

Fluke 87 Series IV Multimeter Bought last March

Asking 200.00

Fluke DSP2000 Lan Analyzer with Remote unit Bought last December Paid 7800.00

Asking 3500.00

For more info please contact jeffrey@cae.ca

According to the proof above provided by Deja.com John (call me toilet-boy or Corky) Mackey is more than a liar. He strikes me as very very sick. These are just 15 of the different names he has used in the past few months. Thousands of messages but all are calling people liars or trying to convince us John (call me toilet-boy or Corky) Mackey is better than a dead man.

I am going to forward this to abuse@home.net his ISP. Maybe they can help stop the one called John (call me toilet-boy or Corky) Mackey from further destroying this and the Ham Radio hobby. Maybe we can all write the ARRL about this great fool of a Ham they have representing the hobby.

Tim Larson think I'll stick with CB!

Maybe forward this to the ARRL?

4597. Drake SW8 for Marine SSB

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-10 00:00:00 UTC
From: biggs30416@aol.com

Source record: 73815

Ok, this is a little off list, but

I'm thinking of getting a Drake SW8 semi portable to keep in touch (listen) to my cruising friends while I"m in my condo. I live on the top floor (6th) of a unit right on the intercoastal in Florida.

Will the built-in antenna be enough to pick up some of the Marine SSB skeds or do I need something more?

Comments on the SW8 in general?

Thanks

Check your turns counting for the 500V winding. I think you're short a few
turns (e.g., It'll be a 250V winding with the turns you have.).

Dave

P.S. Standard Disclaimer: I work for them, but I don't speak for them.

Hi Murray,
Yes you need some kind of modem, but
you can use your pc sound card to do the
modulating and demodulating.
You can use a number of good software
programs, and some of them are free.
Much easier to use than a standalone
tnc.
You can use this software for rtty, psk31,
etc.
Look for Digipan, Mixw, psk software in
the search box of various ham sites like
ac6v.com, arrl, others.
Mixw does rtty, psk, cw, etc.
Good luck and see you on the bands.
Bennett ko2ok

TenTec Hercules 444 solid state linear FS

This amp was owned by Bob Martin N4HK who recently passed away.
I am selling it for his widow.

This amp is a solid state full break-in HF KW Linear. No tuning,
broadbanded. 1.2 KW PEP input all bands, 725W output typical. Blackout
meter panel. Factory mod for 10 meters has been installed. Excellent
condition, styling to match the TenTec Omni C-D Series. Power supply and
interconnect cables included. The power supply is a separate chassis.
Original owners manual included (I think, if we can find it)
Can be operated on 220V or 115V. Amp weighs 22 lbs, power supply 50 lbs.
$550 plus shipping.

contact me (bruce braun bruce@brauns.net 804-239-3752) or

I used 4 inch PVC floor flange designed for mounting a toilet to
the floor with the appropriate fittings.

I go through the soffet and across the attic crawl space to the
shack then down through the wall into the room. The extra space
in the PVC is stuffed with fiberglass insulation and this keeps
birds, bats, and bees out.

I even have 7/8 inch hard line going through with no difficulty.

I really like mine, i have the 13.2 NiMH battery and the smart charger. The software adds a new demension to programming a radio.The alpha neumeric display is cool as well as the menu system.
Now the down side, intermod is worse than my alinco dj-582 and the channel selector knob is kinda flaky. The back is aluminum but the front is plastic but seems to be holding up well.All in all I really like this rig and would recomend it to anyone.By the way, on 5 watts in the winter it is a great hand warmer.

Like you, I didn't have room for a large beam or even a long dipole. After much research and discussion, I settled on the Butternet HF6V and have not been disapointed. I've made numerous DX contacts and constently receive great reports on the other end. It's a great vertical antenna.

The cliperton "in my opinion", is a good amp for the money.

The only drawbacks and they are not real problems are that the PS uses a
voltage doubler so the plate supply will drop a bit under key down
conditions, but it's pretty stable with SSB.

The only weak spot that I know of is the short coax from the tank coil to
the TR relay. It's not very large and I've seen several where the
dielectric melted. It's a problem that is easily fixed.

Nuther possibility is to come out under the bottom edge of the siding.
Drill through at a steep angle. This works good, except in termite country.

Mike,

IMHO, if you want a world-class general coverage receiver for under
$600.00 that would also be a first class ham bands receiver, you
couldn't go wrong with a Drake
R8. Very nice SSB audio. And if you add an MFJ DSP Tunable Filter,
you'll have a cw receiver that will shine!

Have fun.

Good rig. Got one. See 'em typically for $450 to $550. (New cost was
about $1100.) If it has any of the options -- the narrow cw filter
and/or the keyer option, it might be worth $550 (narrow cw filter cost
me $200 or so new).

4631. need adivce on selling Transworld transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-11 00:00:00 UTC
From: sdanaherremovethis@pacbell.net
Message-ID: <399431d5.860800822@news.pacbell.net>
Source record: 73752

About 5 years ago I bought a used Transworld TW7000F transceiver with their coupler. I bought the system from a friend who was in the surplus military radio business, and had planned to use the set on my boat. Now, plans have changed and I would like to sell the radio and coupler.

At the time, I called Transworld and checked on the current price. This unit, the TW7000F was current production and sold for $9k or 10k dollars, plus $3k or 4k for the coupler. The set is in excellent shape, and I was wondering what people thought I should sell them for. For those who are not familiar with Transworld, the FEMA uses them for their emergency communications. This particular set was in use by the CIA, and then sold as surplus. Any ideas?

Thanks,

Steve Danaher

Assuming you are going to buy new, I would look at other brand dual banders. There was a time when ADI radios, the 600 in particular, were $100 or more LESS than compareable "Japanese name-brand" radios. In the last year or so They seem to be in the same price range. If you don't need the dual at the same-time band feature, you can buy a NEW alpha numeric 5W Yaesu FT-50, Alinco DJ-V5TH, or Kennwood G71 for about the same price or Less. All these radios have better audio output & generally more features & freq range in a smaller compact case. The Alinco G5TH Twin bander allows Dual In-Band Rcv & is thinner than the ADI for about $20 more.....Good Luck with whatever you choose!!

: Leland C. Scott <no-spam@junk-mail.net> wrote:
: and I am looking for the following:
: 1. Programming software for the radio.

Mostly made by and sold through Motorola Service Stations and direct. Each of that type of radio requires it's own programming software, there are after market companies... but they lay low because motorhead is sue happy.

: 2. Information on the interface used to program the radio.

You need a "rib box"... a motorola or clone interface box that talks through a serial (com) port of your pc clone. Then you need a specific cable to go from the rib the the radio, the max trac is a telephone 8 pin type (to the mic connector) to the rib "db" type. Easy enough to make if you have a pin out.

: 3. A manual, or information on the frequency range and any other features
: the radio may have.

You have to buy the service manual for that radio... Call motorola's 800 number available in the 800 directory and ask for parts ID, then get out your credit card.

cheers

Hi I want to buy a multiband hanheld tranceiver. I have owned a Yaesu VX-5R and besides it being of an early batch with some bugs I was satisfied. I want to buy another radio and can't
decide whether to go with the VX-5R again or maybe there is something better. One feature I must have in a radio is the ability scan or monitor at least 4 channels (memory bank or group). Below is a list of radios I am considering. Please share you comments.
Regards
Prem.

Alinco DJ-V5T
ADI AT-600
Icom T81A, Icom T8A, IC-W32A.

Has anyone considered the simplier approach of using existing technology? For example, has anyone tried an interface based on MIDI? MIDI can handle a large number of input/output channels, can quickly transfer large amounts of data, and is not controlled by a single company or organization.

While MIDI was designed for music devices, it can control all types of other devices as well (lights, stage props, and others). Therefore, I see no reason why it could not be built into a radio to handle radio control. Users would then be able to use industry standard MIDI interfaces and cables.

It would also be easier to write software if the companies agree on a common MIDI setup inside the radio (this MIDI command controls this, this command controls that, etc).

Of course, this would require radio makers to build MIDI ports into their products (and agree on a common internal setup). And, like others have said, that may be the biggest problem - most companies like the proprietary approach (they make more money by cutting out competition).

For Sale! $150
Radio Shack DX-394 AM-USB-LSB-CW SHORTWAVE RECEIVER.
It covers the 150 - 30000 Khz range, and thus will receive LF for beacons, the AM broadcast band, all shortwave and all amateur radio bands in that range. AM/CW/SSB capable, it has an LCD frequency readout and LCD signal strength meter. The DX-394 is an excellent choice for your general coverage receiver. Covers the entire HF spectrum! Operates on either 120VAC or 13.8VDC with optional power cord. This DX-394 is in very good condition. Telescoping antenna. Operational condition is excellent.

Click this link to see the radio!
http://www.geocities.com/dbnawell/dx394.htm

I can accept payment via PayPal if you prefer and that will get the radio shipped FAST!

4669. DSP-599zx Upgrade Manual Supplement Available, Upgrade backorders ship!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-11 00:00:00 UTC
From: rgawtry@timewave.com
Message-ID: <8n00jr$7um$1@newsfeed.minn.net>
Source record: 73842
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.shortwave

We have had numerous requests for the manual supplement for the new DSP-599zx firmware upgrade (Version 5.0).
The supplement is now available at:
http:\\www.timewave.com/DSP599UpgSupplementver1.pdf

Our emergency EPROM shipment arrived! All remaining DSP-599zx Upgrade backorders will be shipped by Monday, August 14. U. S. customers should have their upgrades by the Aug 18.

If you are a registered DSP-599zx owner and haven't heard from us about the DSP-599zx upgrade, it is possible that your email address has changed since you sent us your warranty registration card. . About 75% of the email announcements bounced - primarily those involving AOL, Compuserve and changed callsigns. Send us your current email address and DSP-599zx serial number to get our database updated. (Send it to sales@timewave.com)

IC-2350H 2M/440 MHz Dual Band Mobile

Dimensions: 5.5 (W), 1.6 (H), 8.1 (D), 2.6 lb
2 M (50 W) 440 MHz (35 W)
Wide Band Rx (118 MHz - 174 MHz)
110 Memory Channels
PL Encode Built-in
Built-in Duplexer
Auto Repeater Shift
Seven Scan Modes, including Fast Scan

IC-2350H SPECIFICATIONS

GENERAL
Frequency Coverage:

VHF:
Transmit: 144.00-148.00 MHz
Receive: 118-174* MHz (*guaranteed 144-148)
UHF: 440.00-450.00 MHz
Mode: FM
Number of memory channels: 110 (100 regular, 2 call, 4 scratch pads and 4 scan edges)
Antenna Impedance: 50 ohms (nominal)
Power Supply Requirement: 13.8 V DC+/-15% (11.5 A)
Usable Temperature Range: -10�C to +60�C; +14�F to +140�F
Frequency stability: Less than ±10 ppm
Tuning step increment: 5, 10, 12.5, 15, 20, 25, 30 or 50 kHz
Current Drain (at 13.8 V DC):
Transmit at high power: 11.5 A (VHF); 11 A (UHF)
Receive: 1.2 A (squelched); 1.8 A (max. audio output)
Dimensions (projections not included): 140(W) x 40(H) x 204.5(D) mm, 5.5(W) x 1.6(H) x 8.06 (D) in
Weight: 1.2 kg; 2.6 lb.

TRANSMITTER
Output Power:
VHF: 50 W, 10 W, 5 W selectable
UHF: 35 W, 10 W, 5 W selectable
Modulation System: Variable reactance frequency modulation
Max. Frequency Deviation: ±5.0 kHz
Spurious Emissions: Less than -60 dB
Microphone Impedance: 600 ohms

RECEIVER
Receive System: Double conversion superheterodyne
Intermediate Frequencies:
VHF: 1st 17.2 MHz; 2nd 455 kHz
UHF: 1st 30.85 MHz; 2nd 455 kHz
Sensitivity: Less than 0.16 ΅V (typical) for 12 dB SINAD
Squelch sensitivity: 0.13 ΅V (at threshold)
Spurious and Image Rejection Ratio: More than 60 dB
Audio Output Power: More than 2.4 W at 10% distortion with an 8 ohms load.

This one is used but never abused (8+ easy). I bought it new four years ago and it has functioned exceptionally well ever since.

No mods have been applied

Reason for selling. Make room in the truck for the FT-100

$295.00 plus shipping if needed

Hello all...been studing for the ham test and started looking for a radio today. I drove semi for many years and want to find a ham radio that can be used in the cb (with low power of course) to help with local dirctions. I have been a Military RTO with 8 years service in the army so I did learn some of the rules so far, and I have a good ANT (the army OE-254 kit is up in the back yard now) I hope somebody has something lieing around extra, I'll even trade a computer for it if needed to get one.

thanks.

4685. Tektronix selling price survey updated

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-12 00:00:00 UTC
From: "Phil T. (VA3UX)" <phil@vaxxine.com>
Message-ID: <3995A7DC.CCAE10E@vaxxine.com>
Source record: 73708

My selling price survey of Tek stuff on eBay has been updated. The
survey
now includes 1157 different instruments (scopes, probes, plug-ins etc),
and
there are over 12,750 prices data entries gathered during the past 12+
months.
Some HP, GR and Wavetek stuff too. The number of vintage GR listings
has increased.

My site is located at :

http://www.vaxxine.com/phil/

Comments/suggestions on the format greatly appreciated.

Phil Turcotte (VA3UX)

4688. Power supply question? HELP

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-12 00:00:00 UTC
From: G Duffield <duffield@jomax.net>
Message-ID: <GUil5.618$3C5.177553@news.uswest.net>
Source record: 73711

I have an Astron 35 amp power supply. It's 15 years old and has had a good service life.

When I have a small current draw the voltage is 13.8 volts but when I draw 12 amps the voltage drops to 11.7 volts.

Is this normal for this power supply to do this? Could this be damaging to my radios?

4689. Ham operating manuals and associated books FS

Another way they hide the screws is to put a rubber sheath over the knob. I don't have a 767, but on my 940(same era), you roll back the rubber covering the knob to reveal the set screws.

Probobly not hurting your radios...

See if rhere are some jumpers labelled 'sense' on the output terminals of the power supply. You can use the 'sense' function of a power supply to move the regulation point right to the terminals of the radio and minimise the IR drop in the wiring between the power supply and the radio.

>know much about scopes. Thanks Larry

Save your money if all you want is a light show when you transmit. Get
a used Tek or HP analog scope at the next hamfest in your area. Unless
you are going to start building stuff, maybe even a Yaesu Monitor Scope
would be best - see some action on receive too...

You understand that you can run a CB or you can run an amateur, but you can't operate an amateur transceiver on CB and you can't operate a CB on an amateur frequency?

This is not normal. You should be able to draw over 20 amps without any voltage drop so to speak of. Even at 35 amps I would not expect it to drop .5 volts. Either the supply has some problems or you are not measuring the voltage properly.

Are you using a transmitter and the rf causing problems by getting into the meter or maybe getting into the supply ?

I replaced the 723 regulator chip and that seemed to be the solution.

Now when I draw 15 amps the voltage does not drop.

Hi, If its not from another Ham repeater, then I bet it's a third harmonic from a nearby cordless phone on 48.92 Mhz(x3= 146.760). If you have a scanner, take a listen on 48.92(this is the handset tx freq)(or 43.84 MHz, the Base half), and see if what you are hearing on 2M matches. The interference may not be evident everytime the phone in questiuon is used as these newer gen phones can automatically select any one of 25 CHs each time they are used. 73s Steve DE WA1YKL

yes !!

I am looking for 4-5 (maybe more if the price is attractive) Motorola HT1000 Speaker Mics. They Need not be working, but if they do, it would be a plus.

Anyhow, I have many things in the warehouse for trade and would
be willing to trade other mics of a similar nature, or if all else fails,
there is always Cash...Will pay shipping too

Monty

Programming this radio from the ground
up could be expensive .

Factory Mototrola hardware such as the Rib Box, Rib To Computer Cable, and
battery can run as much as 250.00, sometimes if you are lucky, you can get
it in the 100.00-150.00 price class.

Clones are eben 1/2 of that price, but one needs to use caution when using
clones.

Software from Motorola is horribly expensive (350.00) so unless you either
know of some friends, you probably would
be better off letting someone else program
it for you.

If ya get discouraged, well, i may be intertsted in the radio.

kenwoods, Icoms, vertex radios are much
easier programmed.

Go to a metal shop and have them cut a 2" angle iron the the width of the window you wish to use. Drill 4 hole in one side to attach to the window sill where the window mates with the sill. In the upright drill the correct size hole for bulkhead (passthru) connectors of the type you are using (PL-259, N, Bnc, ect.). When the window is closed on the edge of the angle iron, drill a hole at the top edge of the window to allow a bolt type lock to be installed on top of the window, so the window can be secured.

```

Hi all,
I have a few scanners for sale-

Uniden BC200XLT (unblocked), extra battery pack, rubber duck. Near perfect condition. Make an offer.

Pro 92 (1.00 version), software, cable, original box, manual. This radio is in PERFECT condition! Only turned on twice. Make an offer.

Pro 2046 radio is in pretty good condition. No scratches on face or screen.

Pro 26 Radio is in alright condition. Does not 'search' correctly. Case has small hole cut into it (from mod that didnt work). Scans perfect. Other than the search function this in a GREAT radio.

I will only ship in CONUS. Please make an offer.

Jim (KC7RYD)

4726. Equipment, Parts, misc Sell and some Freebies

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-13 00:00:00 UTC
From: k0pyb@my-deja.com
Message-ID: <8n6ka3bdk1@nnrp1.deja.com>
Source record: 73654

I am about to travel and visit my parents home. My Dad is a Silent Key:
He accumulated tremendous amounts of parts, also there are still a few
items of equipment of his that remain:
1) There is a tube type Tektronics Scope (will have to ck for model.)
2) There are two NCX-3 xcvrs.
3) There is a Millen 90800 (i believe that is correct) RF deck.
4) Two homebrew Class B Linear Amplifiers (built by a real craftsman)
There are a slew of other things...but I will have to build a listing
to be able to converse intelligently as to what is there.
4) Many parts: 40s, 50s, 60s 70s and 80s.... and I mean parts. i.e.
resistors, capacitors, transistors, tubes, chassii, connectors, screws,
nuts, bolts etc etc.... (you literally have to see to believe)!!

We are not listing to make a profit, if something is deemed sellable,
will let it go at a very reasonable price. If it is deemed as a
freebie, you can simply tote and carry.

Please: No shipping. Anything will have to be picked up. My Mom is
nearing 80 and she cannot ship. If you contact me at my email address,
I will call you back.

I will be at the homestead in Missouri (32 miles SE of KCMO) from 29
August to 6 September this year. Will also make or try and make a
comprehensive list of this gold mine.

Also, atop a 45 foot tower there is a HyGain TH3.... have no idear what
is its condition, however, it is free to anyone that wants to come,
climb and take it down.

4728. HELP - Need Mirage B-3016 2M Amp Schematic

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-13 00:00:00 UTC
From: n0ss@earthlink.net
Message-ID: <3996d919.103652801@news.earthlink.net>
Source record: 73656

Greetings to the group:

For many years our 2m repeater, of which I am the trustee, has functioned flawlessly.

Now, unfortunately, the Mirage B-3016, 30Win-120Wout, amp no longer wants to T/R properly. This amp is about 15 years (or more) of age, so supporting docs are sometimes difficult to find. The other day, I came to the realization that I have no schematic for this amplifier and that having one would be a great assistance in tracking down the culprit.

If anyone happens to have a copy of the B-3016 amplifier schematic which they could either copy and mail to me, or which they might be able to SCAN and send me the graphics file, I'd be most appreciative.

If you can help, and BEFORE you do anything, PLEASE reply to this message DIRECTLY to my e-mail address: n0ss@earthlink.net. Also NOTE that the '0' in the address is a ZERO, and not an 'oh'.

Any assistance will be greatly appreciated.

Is it just me, or is this too good to be true. How many other companies would think to do this (post a general update on a news group). Needless to say, I don't own any Timewave equipment (I do have an old AEA PK-12), but if I'm ever in the market I'll remember this. Customer service is not dead!

4737. Kenwood TL-922 Tech input asked!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-13 00:00:00 UTC
From: John de Seijn <jdeseijn@zeelandnet.nl>
Message-ID: <3997147f$0$20391@news2.zeelandnet.nl>
Source record: 73665

Help,

I want to buy a second handed TL-922.
Are there any specific items in this Linear amplifier i should check ? To be sure to buy a good one !
Are there any modifications done by Kenwood in the later versions? (which serial number range?)
Is it possible to use the TL-922 on the WARC freq's?

Thanks in advance,

73 John PA3GEM

4739. DR-590 help

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-13 00:00:00 UTC
From: Steve Heckathorn <heck@kconline.com>
Message-ID: <3997183B.6FCAEB15@kconline.com>
Source record: 73667

I just installed my Alinco DR-590 in my truck with a separation kit.
When I turn the unit on everything in the display head light up. I
thought I needed to reset the radio. So I tried from memory. Buy holding
button while turning on the power button. I thought I had succeeded
because the display went to 145.00. However nothing else would work. I
did not use the function button to get to this point. I later found out
that you reset the radio by holding in the function button and turning
the radio on. I tried this but no luck. I disconnected the remote kit
and hooked the display head back onto the radio. no luck there either
disconnect the power cord and the separation kit for a few minutes then
tried again no luck. Does anybody have any ideals.
Thanks and 73's
Steve N9QEX

Looking for a 20 meter mobile rig if anyone knows of such a beast.
Small is the main factor, features are no biggie.. Not necessary to
have all the bells and whistles, just a good transmitting and recieving
radio.

Let me know what you have or if you have any good suggestions.

>
> My grounding questions:
> 1. How important is a ground? Most people say that grounding is all-
> important, but I have had a few people tell me that grounds aren't
> necessary.

Grounds fulfill three distinct functions. The best ground for one function isn't necessarily the best for another. The three are:

a. Safety ground. This protects you from a shock hazard if one of the mains or high voltage power supply wires contacts the chassis due to some kind of fault. The requirements for this ground are spelled out in your state's electrical code. I believe that most states adopt the National Electrical Code (NEC). The safety ground conductor in your wall sockets should be connected to ground according to this code, and your rig's chassis should be connected to the safety ground.

b. Lightning ground. The requirements for a ground for lightning protection are much more stringent than for a safety ground. The topic has been discussed in this group many times, and there are numerous resources available for learning how to make a ground system for lightning protection.

c. RF ground. This is required only for certain types of antennas -- ones which require current flow to ground to complete the antenna circuit. An example is a quarter-wave vertical. One wire of the feedline connects to the base of the antenna, and the other connects to ground. The connection to ground has to have a low RF resistance, or you'll expend too much of your power heating the ground. A few radial wires will provide a moderately low loss connection. A ground rod will help a little, but the RF resistance will be high, resulting in quite a bit of loss. Chapter 8 of the ARRL Antenna Book shows the approximate trade between resistance and number of radials. If your antenna is much shorter than 1/4 wavelength, you'll need many, many radials to get reasonable efficiency. If it's longer, you can get by with fewer. A 1/2 wavelength base-fed vertical needs only a very modest ground, and a ground rod is adequate. The requirements for various other end-fed antennas depends on their length. If you use a "complete" antenna like a

dipole or a ground plane (that is, one that doesn't require your feedline to connect to ground), you don't need an RF ground, as long as you keep common-mode currents off your feedline. A "current" or "choke" balun is most commonly used for this.

> 2. What are the ground/counterpoise alternatives to driving an 8-foot
> metal pole into the ground? I live in an apartment, and I highly doubt
> I can do this.

Shallow-buried radial wires are the best. Connection to other conductors just under the surface, like a metal water pipe, is next. These are for the RF ground described in c.

> 3. I have heard that balanced antennas don't require grounds. How do
> I get a balanced antenna?

See ground type c, above.

> 4. How do mobile HF operators get RF grounds? For obvious reasons,
> the 8-foot buried pole won't work.

In a typical HF setup, the car is capacitively coupled to the ground, so the antenna is something sort of like a cross between a lopsided vertical dipole (with the whip being one side and the car the other) and a vertical with elevated radial system.

Something in the high current path has increased in resistance. Look at the soldered and mechanical connections. The low-valued current sense resistor(s) may have increased in value. You may see signs of overheating around these resistors.

One of the rules has something to do with "type acceptance" on the Citizens Band. There are already several posts about that.

If you are going to be a ham you are going to end up with half a dozen boxes anyway.

If you insist on having only one box you still will be restricted to "ham or CB" at any given time. Might as well run one of those five-dollar garage sale CB sets for that band and stay legal. That will broaden the list of potential ham rigs to include many that aren't so easy to put on the Citizens Band. Probably cost you less, too.

There are good people to chat with on CB so there is no reason to limit yourself to emegency only communication.

Bill KU8H

If I remember correctly KLM made two types of amps, one is for FM only
and another is for FM/SSB.

I don't know the exect differance in the KLM modles, but in general the
FM only ones do not have a biasing circuit and run class C only. This
leads to lots of distortion when being used for SSB and AM. If you have
an amp that is for SSB also, I would check to see if the biasing circuit
is working correctly and is adjusted to the proper place.

4763. FS: Kenwood TS-820S Station

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-13 00:00:00 UTC
From: Rick Riverman <rbriver@home.com>
Message-ID: <Szyl5.92002$V34.886972@news1.sttls1.wa.home.com>
Source record: 73744

FS: Kenwood TS-820S 160/10 HF with the following accessories,

- DG-1 Built in Digital Display
- YG-88C 500 Hz CW Filter
- VFO-820S External VFO
- SP-820 External Speaker
- MC-50 Microphone
- Operation Manual

Very good cosmetics, excellent electronics - 100 watts out on all bands.
This is a clean 820 that has seen excellent care.
I will sell it all for $475.00 + shipping from 97006

See attached photo.

Thanks,
Rick

> Save your $$$$$ go to www.arrl.org for FREE TESTS ONLINE

Our software prides itself on being incredibly TIME efficient. We offer multiple testing modes, a slick interface, and a lot
of customizability. While it varies from person to person, it's not a stretch to conclude that you'd save about 6 or more
hours studying for a given test by using our software than by using the web-based tools. Isn't your time worth more than $5
an hour? And if you take more than one test (remember--our software comes with lifetime free upgrades)--isn't your time worth
more than $2.50 / $1.80 / $1.25 .. an hour?

Our software is very reasonably priced, and has exceptional feedback from its users who value their time. We sell a great
product at a very nice price. While we mean no disrespect to our friends at ARRL, remember: you can also save "$$$$$" on
rock salt for when it snows by taking those packets home from McDonalds... :)

cheers,

Adrian

I made mine with powerpoint. Pasted jpg's of things that I liked.
Made a box for QSO information and then saved it as a jpg.
Next I made a new one and pasted the original and formatted
it to fit 4-up on a page then printed them. Or, you could take
them to any office place and they would print them. Easy to
make small batches and very easy to change them.

Hi,

I am trying to locate a Science of cambridge (Later to become sinclair) Mk14 computer. The computer was available in a home built kit in the UK and, from what i am led to believe, many were sold to amateur radio enthusiast, as, at this time they were the only people experimenting with electonics in the home build environment. (Hence my reason for posting in this group)

If you have one, or any spares, or indeed any sinclair items ie radios, calculators, watches, etc, working or otherwise, that you would like to sell please email me as i cannot regularly access newsgroups.

I would also possibly be interested in early home computers from the late 1970 to the late 1980s. Preferably boxed but all will be considered.

Thank you in advance.

I'll chime in on this one and say that I thought the software was very good. I had used some of the online tests, but I found that they were not a time efficient. I also found the software to be very versatile so that I could do a lot more custom things with it which I think helped me a great deal.

And no I don't work for them, and no they did not ask me to post this. I just thought I would toss in my 2 cents worth because I was pleased with the software.

Do it up yourself.

If you have any version of windows you have all the technology you need to design your own QSL card.

Look at mine at HTTP://www.qsl.net/AI8O .

It was made using just Paintbrush and a BMP graphic. The Typefaces were downloaded from
an el-cheapo $2.99 "Fonts" CD.

Make up the card in B&W if you only have a Laser printer, color if you have a color inkjet.

If you have Word for Windows (ver 2.0 or higher) or AVERY Label PRO, you can print the cards yourself using AVERY post card stock.

Questions??

Feel free to E-Mail

Dan Yemiola

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.antenna,rec.radio.amateur.equipment

I am a newly minted, no-HF-experience General bewildered by various issues of setting up an HF shack. I'm trying to gain as much knowledge as I can before I buy the rest of my equipment.

My grounding questions:
1. How important is a ground? Most people say that grounding is all-important, but I have had a few people tell me that grounds aren't necessary.
2. What are the ground/counterpoise alternatives to driving an 8-foot metal pole into the ground? I live in an apartment, and I highly doubt I can do this.
3. I have heard that balanced antennas don't require grounds. How do I get a balanced antenna?
4. How do mobile HF operators get RF grounds? For obvious reasons, the 8-foot buried pole won't work.

I live on the ground floor. Outside my apartment lies a 10-20 foot stretch of grassy open space where anyone can walk by (well, at least it faces away from the parking lot and towards an unreachable area of steeply downsloping woods). Between my apartment and the unreachable area, there are NO bushes, shrubs, railings, trees, or other large objects I can use to conceal wires or other objects. I'm sure that even a well-camouflaged wire would be discovered sooner or later. At least someone on a higher floor can better conceal things.

Can I still operate HF stealth with an outdoor antenna? Could a wire antenna work?

Or would I be better off using a mobile antenna (like a Bugcatcher) outside and bringing it inside when I am not operating? Since I only plan to operate a few hours per week, few people would notice.

**** YES! This software is now updated to reflect the April 15th
**** changes in FCC licencing structure for Amateur Radio. The software
**** contains questions for the new and old ham tests as well as
**** the unchanged professional tests.

Greetings!

dauntless-soft.com is pleased to offer high quality MS-Windows test
preparation software for the FCC/HAM plus some Professional tests
available for shareware download at http://www.dauntless-soft.com.
(aka http://www.hamexam.com -- easy to remember address--tell your
mates!) The program will drill you for the following elements:

ELEMENT
2 (NEW) Technician
3 (NEW) General
4 (NEW) Extra
2 (pre April 14, 2000) Novice
3A (pre April 14, 2000) Technician
3B (pre April 14, 2000) General
4A (pre April 14, 2000) Advanced
4B (pre April 14, 2000) Extra
1 GROL Basic Radio Law
3 GROL General Radiotelephone
7 Radar Endorsement - Ship Radar Techniques
8 GMDSS Radio Operating Practices
9 GMDSS Radio Maintenance

You are welcome to download this and give it a try. Secure online
registration is available--a $30 registration unlocks ALL the questions
and entitles you to FREE LIFETIME UNLIMITED UPGRADES of the
software. That's less than $3/test.

This software is based around the same engine that drives our FAA test
prep software that has helped many pilots score very highly on those
exams. (Yes, we got a new hobby and decided it was time to write
software for it, too!)

Thanks for your time. We look forward to your visit!

It is London Amateur Radio Club, in London Ontario, Canada. Those acronyms are quite confusing in many cases. I will be there on Sep. 24th. as a vendor.

Standard C5718DA Dual Band Mobile rig for sale.
Display, touch pad, and speaker are all in the mike. (excellent security feature) Unplug the mike when parking and the radio is unidentifiable and unable to be used illegally.

This radio has the VCO module upgrade from Standard. Excellent working order. Some wear on the rubber finish on the mike where it was hung on the dashboard. No wear/damage to the display crystal or keypad.

Asking $325.00 plus shipping.

Please reply here or to wu6t@earthlink.net

Icom's IC-706 little HF (plus 6m and 2m). I only used this on vacation (not mobile). Comes with: hand mike and Icom desk mike with cable adapter; 16' extension cable for remoting the head unit; Industrial Vicor V1-LF1-LU 120/240 VAC Flat-Pac switcher supply. Add a hunk of wire for an antenna and you, too, can be in business for a great vacation HF station. $799 plus shipping lower 48. I wish to sell as a package only.

You forgot one other - most of the new, heavily computerized,
multiband radios require a ground to prevent RF from causing problems
with the digital components inside the radio. In these radios, the
results of a poor ground can range from lost memories to erratic display behavior.

In fact, when these people are talking about a good ground, they're
not talking about a simple ground rod - they're talking about a ground
"system" consisting of multiple rods in conditioned earth.

This approach would work. It would be just another interface between the
radio and the computer hardware. Using a structured approach to the
software design the differences between hardware interfaces can be hidden
from the application software.

I would be nice to have one common interface type to work with, but the
computer world seems to move too fast for any one interface to become a
"standard".

Thanks for the information. I hadn't forgotten it, I just didn't realize
that modern radios were so poorly shielded and so sensitive to common
mode current. The finest, most sensitive test equipment you can buy,
which is extremely immune to outside interference, doesn't require any
ground except the safety ground. So the requirement of additional ground
isn't due to computerization but to basically poor design. I'm not
surprised, though. The market places much more value on bells and
whistles than on robust design.

You could be daring and create your own using a word processor. Include a nice regional picture, dress it up any way you want, then take it to a local copy shop and have them put it "4-up" on a page and cut it for you. It will cost the same or less than the usual sources charge and will be a card people will value and enjoy much more than one with your call sign in red and a picture of the globe.

I think Dwight might be referring to problems caused by the poor
bypassing and lead routing that is common today in radios.

One example is in the key jack. My IC-751A doesn't ground the keyjack
at the chassis, instead the ground lead and everything bypassed has to
follow a path all the way to the circuit board where the keyer chip
is.

Audio systems do the same, although in some radiaos they wisely have
the RF bypasses grounded through a less lengthy path.

Grounding the case of the radio can help eliminate common mode
excitation causing the accessories connected to the radio from feeding
RF into the non-grounded jacks, like audio and keying input lines.

Why the radios are grounded that way internally, instead of using the
chassis or cabinet entrance points as a common ground point, is beyond
me. It must be because it's easier to insulate a jack and a tiny PC
board on a jack than isolate the signal input on a complex circuit
board, or they've never bother to learn how to work with ground loops
properly.

It amazes me they even pull that nonsense with a dc control signal
that has a two or three volt threshold, like the keying line inputs.
On my test radios that are subjected to high RF fields, I rewired
everything and grounded all the shields and jacks at the inputs where
the leads first enter the radio.

I am selling off several pieces of my station so I may upgrade tosome newer equipment.

Ten Tec Paragon, model 585. Equipped with FM board, RS-232 interface, and voice board. Includes hand microphone and Astron RS-20 power supply. Functionally 100%, cosmetically 8 out of 10. Some minor cracking around screws on front panel, the lettering is rubbing off the LCK (lock) and TUNE buttons. Recently replaced several of the buttons on the control panel so it is working 100%. 6, 2.4, 1.8, 500, 250 filters included.
$800.00 firm plus shipping.

Kenwood TS-700A all mode 2 meter transceiver and out board linear amp. TS-700A equipped with sub repeater options. Functionally 9 out of 10, two of the grain of wheat bulbs are burned out. Internal 28V power supply recently rebuilt by AES Milwaukee so it is 100%. Cosmetically an 8 out of 10, normal minor scratches and dusty. Amplifier is a VJ-90, 1970ï¿½s company now out of business. Functional 6 out of 10. Transmit amp and auto T/R switch are fine, preamp dead. Never needed, TS-700A receiver is very good. Have original hand mic but element is dead. Includes manuals for TS-700A, no manual available for amp.
$275.00 firm plus shipping.

Kenwood TS-660 15, 12, 10, 6 meter transceiver. USB, CW, AM, and FM, 8-10W in, 4-5W out. Cosmetically an 8 out of 10, normal minor scratches and dusty. Includes MC-85 microphone, missing foam mic cover, Astron RS-12 power supply, and manuals. Has SSB and CW filter no AM filter.
$325.00 firm plus shipping.

Heathkit SB-401 transmitter. Includes transmit crystal pack. Cosmetically an 6-7 out of 10. Normal chipping and minor scratches on paint. Very little rust. Old masking tape residue on front panel. Missing top cover on RF cage. Unit is complete but I bought it and never tested it. I will include a Heathkit SB-400 replacement manual and a used mic connector for your mic.
$150.00 firm plus shipping.

All items I try to represent honestly as to true condition. Except for the Heathkit SB-401 which is sold As Is, all equipment is functional as described but no warranty is offered. If it arrives DOA, I will consider returns at 100% refund of all monies.

Shipping is real cost, no extra for packing but will be shipped insured. I use USPS but will ship Fedex at buyerï¿½s request plus the real cost for Fedex shipping. Check or money order, I will accept COD,

but I will add COD charge to the shipping cost. US buyers only, no international or US territories.

If you have any additional questions, please contact me by e-mail or evenings at home. My call is good in current call books within the last 4 years.

Move out.....seriously tho....you got a problem there. And yes a wire
antenna would work out well. The trick will be to hide it. I don't
know what you mean by "unreachable area".

Also can you run a whip on your car and drop a feedline to it? Just a
thought.

With what your saying I guess you will have to stick something out the
window in the middle of the night.

Is there anyway you could get access to the roof?

Dan/W4NTI

FS: This WWII ship's wall clock looks incredibly neat in any radio station. It is a black ship's wall clock, 8 day wind-up, radium dial, dated 1941 in its face, black face/radium white numbers, mfg by Seth-Thomas, removed from a WWII submarine, hinged mount for winding, known as a "Mark I" clock, and is in very nice physical condition. If you want the ultimate touch for your station, this is it. I want $425 for it. Mike, (979) 693-1461.

Dean,

There is a ham out there who does conversions of SB0-220s and SB-200s to 6 meters, and as a result he has coils and bandswitches as left-over parts that he sells separately.

You might want to talk to him about a replacement bandswitch.

His e-mail address is: Carl KM1H@JUNO.COM

I have a little question that I can (hopefully) get a good answer to. I got my no-code technician license when I was 14. I'm 20 now, and I have unfortunately never used my license. Do you think that a 2-meter handheld transceiver is a good place to start? I don't want to talk to thousands of people all over the world, just listen and participate in local conversations a little.

Anyway, the main thing I'm looking for in a HT is price.. low price. Less than $100 if possible. Also, I'd like to get one that's fairly compact. I've been looking at a couple models from Alinco. The DJ-S11T is tiny and cheap.. but only 350mW. Any thoughts on this? Is this good enough for a new ham to get started? Thanks for any help you could give. And if anyone has a used handheld they want to sell, let me know.

On HF, with in a few inches. It gets more critical as you raise in
frequency. UHF, is very critical.

Well, I don't see how Yaesu could shield their FT-847 any better. It has an all metal case with 7 layers of component boards inside, with each board surrounded with its own metal shielding. In addition, a large number of the components on each board has still more shielding. Yet, this radio is really bad when it comes to poor grounding.

In Washington State, where the ground was relatively dry and rocky, I had to install a ground system consisting of multiple rods to get proper performance. On the other hand, here in South Carolina, where the soil is moist and tightly packed, a single ground rod was plenty.

In my specific radio, the results of poor ground makes itself known in the sideband performance - a slightly distorted signal. However, from what I have heard, this appears to vary with each radio (others have reported other problems, all solved with a better ground). The manual warns about this, but most (like myself) ignore it until a problem crops up.

Anyway, I'm not so sure it is poor shielding, or just a result of trying to stuff so much stuff into one radio. I don't know enough about all this to judge. But, I do know I love that radio's performance, and its capabilities. So, I can deal with this minor issue.

2M is the way to go to start out with. If you can afford it, get the most 'bang for the buck' and put as much into the radio as you can. I initially bought a Kenwood TH-235, which will do 5W easy, but only with the big battery on it. It is a bit heavy and bulky, and now I wish I had gotten a smaller dual bander. They make some nice dual/triple banders that are compact and can crank out 5W. What you can do is get the best radio you can afford, and then later scan some hamfests and see if you can pick up an amp (to put in your car) and then configure you a power supply both at home and in the car. That way, the only time you will really use the battery on it is if you are walking around, which I found for me is not often. Most of the time I am talking on it either in my home or in the vehicle. I have a simple glassmount antenna for the car with a 35W amp (I got it for $30 at a hamfest) and for the home I just run 5W but it is into a copper J-pole (about $6 to make one). Mostly I use 2M for our local ham club nets and the weather/ARES nets that are in the area. It is nice when there is bad weather (I mean really bad weather) to fire up the HT beside the bed with just the small antenna and find out what is going on all over the county and get reports directly from Skywarn from net control. I get a better idea of what is really happening in the area than what the weather channel tells me.

Run the wire from the "unreachable area" to the side of your building at
an upper floor, then down to your apartment window and through. This
will work great, provided you can gain access tot he roof or uppe rfloor.

4827. Front-end bandpass preselector

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-15 00:00:00 UTC
From: Miller Liu <muller@tp.silkera.net>
Message-ID: <39993051.259D8820@tp.silkera.net>
Source record: 73628
Cross-posted to: rec.radio.amateur.equipment,rec.radio.shortwave,rec.radio.scanner

Hi,

I wonder how a excellent built-in front-end preselector to be. I especially amazed by
11 bandpass band filter and manully tuned Hi-Q preselector which are built-in of new released YAESU FT1000D-MKV HF TRX. You can recieve very clean weak singnal besides strong signals. You can link to http://www.muohio.edu/~4cx250b/web/markv.htm to know
more details.

My question is (1)How can tell good built-in preselector from so-so one? (2)Why most brochure don't tell more infomation about
built-in preselector, even military rx such as WJ-1000A, Ten-tec RX-340? For amateur trx and rx, you have to read through block diagram to know more about preselector info.

I can't get a lot info from ARRL Handbook and the web, please tell me more. Thanks!

Miller in Taiwan

++++++++++++++++++++++++++ QUOTED FROM YAESU DM
++++++++++++++++++++++++++++++++
VRF Preselector Filtering protects receiver front end (160M ~ 20M)
Extending the protection afforded the sensitive front-end components of the receiver, Yaesu's engineers have developed the VRF module: a high-Q input preselector filter ahead of all active devices in the front end, including the main bandpass filters!

Particularly in multi-operator contests or DXpedition environments, where large low-band antennas may be in close proximity, a receiver operating (for example) on 20 metres can suffer Intermodulation interference from on-site 40- and 80-metre signals, compounded by extremely strong 7 mHZ broadcast signals. The VRF circuit provides narrow-band selectivity which prevents this unwanted signal voltage from hitting the input side of the bandpass filter switching diodes, where 2nd order IMD is most often created in an HF Receiver,. Tuning of the VRF is incredibly simple: just turn the VRF/MEM CH knob, and peak the background noise or signal strength!

The VRF is stoutly designed with large (10mm X 10mm) coils yielding high Q, and precision tuning capacitors ensuring that performance does not degrade over time. A total of 31 L/C tuning combinations allow very quick QSY, and the use of ten high-quality, shielded relays for VRF selection ensures that nothing in the VRF can itself contribute IMD.

Receiver front end highlights The MARK-V adopts the low-noise front end of the FT-1000MP. Two low-noise junction FET preamplifiers are provided, one in a tuned configuration with optimised gain and noise figure independently for the high and low bands, with the other flat preamp providing a wide, uniform gain response.

The first mixer utilises a quad of SST-310 Junction FETs in a doubly balanced circuit, resulting in wide dynamic range. Eleven bandpass filter networks provide input protection for the front end, working in concert with the VRF to provide the best ever 2nd order IMD prevention in an amateur transceiver.

group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)422-4210. The part number on the service manual for my VHF-high band monitor is 68P81048A55-G and my VHF-low band manual bears part number 68P81050A95-D.

John Miller reports the current price is $5.70 for service manuals. Motorola advised John that Alert Monitor parts are scarce, with last stocked being in 1995, Knobs are no longer available, though there are many that would fit.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model	UHF	VHF-high	VHF-low
SM-301	X	X	X
SM-302	X	X	

SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) / 10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications Corp. sells used Plectron receivers, in working condition, for $75-100. If you require crystals or reeds, TCS may be able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like" signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors for sale. I'm hoarding them. :-)

Source record: 73635

Thanks for reading this.

I was given a Kenwood 350(g) type-1> I was wondering if it will work on 440-450 MHz. all I can find is this radio was made for 450-470 MHz range. If it will work do I need to mod the radio or is it software controlled?

I have found listing for the software its about $30-40. That ok with me; some programmer needs to feed some kids.

The cable from PC to radio is a about $130. Now that is a lot more than I like to pay. Can I use a different cable (ie adms or rib box) and make a adapter lead?

I have 1 of the type M68729 class C (i.e. FM) 30 Watts out average, 40 Watts max. These will replace older M57774 modual just fine. The input drive is 300 mW for 30 watts out. I am asking $50.00 including shipping to conus for them. RF parts wants around $70.00 for the same.

These are brand new never been used and still have the one inch leads on them.

Thank You,

Bryan Fields, KB9MCI

I have not seen any of that cable in about 10 or 12 years. Unless you are looking for some high voltage use, you would do better with the newer heliax cables. The 1/2 inch and 7/8 inch heliax is much better for losses, more available and plenty of connectors floating around. Just stay away from the solid smooth outer shield. It is hard to work with and will fracture easy if scored while trying to remove the outer jacket.

Jim

FS: I have just gotten 3 (qty) new military LS-3 speakers, each new in its own unopened box. These are the speakers that were used with the WWII and Korean War recievers. They are 600 ohm impedance for the receivers like the SP series (& BC-779) Hammarlunds, the RAX, BC-348, BC-300 series, etc receivers and more. I am keeping one and letting the rest go for $50 each. Mike, (979) 693-1461.

>Yet, this radio is really bad when it comes to poor grounding.

As I explained earlier, it isn't the shielding that's the problem.

It's how the bring the leads into and out of the case, and how they
ground and bypass the jacks that are the problem.

You can have all the shielding in the world and one poorly routed and
bypassed lead wiill totally negate all the layers of shields.

>>Is there a 440 HT that will allow me to transmit up to 470 MHz.

To keep all thigs legal, you need a commercial, type-accepted HT.

You cannot legally operate an amateur HT in the commercial bands. BUT, you can go the "other way," and program your amateur freqs in a commercial unit.

>>...the Pryme PR-460 ... http://www.pryme.com

An excellent choice. One of the best deals going for a commercial, type-accepted HT - if I do say so myself.

Source record: 73579
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

For sale:

Kenwood TM-2550A 2m FM mobile xcvr. Transmitter, memories, DTMF dialing, LCD display, and all other functions work fine, but the receiver sensitivity is WAY down (nearly DEAF). Does not have PL tone board, although it is still available new (model TU-7). Comes with up/down mic, power cord, mobile mount, and owner's manual. It's in decent condition, with a little light wear here and there. If you're equipped to troubleshoot VHF FM gear, this could be a good project rig, as I suspect there isn't much wrong with the receiver. It works, but lacks sensitivity. Bad RF amp or i-f amp? Who knows. I bought the rig on this newsgroup and was told that it was in working order and had the TU-7 tone board installed. I got screwed. I paid $125 plus shipping for it. I'm not equipped to do VHF FM troubleshooting and repair, and I can't see paying someone $50 per hour to do it for me. So, I'm going to cut my losses and sell it as-is... best offer buys it. I'm open to trades also (boatanchor gear, tube-type CB radios, Drake gear, Heathkit gear, etc, and I could use a 1 KW+ antenna tuner with a balun), making up the difference if any with cash.

TS-660 has NO CW filter, posting updated

WB3KUM/9 wrote:
I am selling off several pieces of my station so I may upgrade to some newer equipment.

Ten Tec Paragon, model 585. Equipped with FM board, RS-232 interface, and voice board. Includes hand microphone and Astron RS-20 power supply. Functionally 100%, cosmetically 8 out of 10. Some minor cracking around screws on front panel, the lettering is rubbing off the LCK (lock) and TUNE buttons. Recently replaced several of the buttons on the control panel so it is working 100%. 6, 2.4, 1.8, 500, 250 filters included.
$800.00 firm plus shipping.

Kenwood TS-700A all mode 2 meter transceiver and out board linear amp. TS-700A equipped with sub repeater options. Functionally 9 out of 10, two of the grain of wheat bulbs are burned out. Internal 28V power supply recently rebuilt by AES Milwaukee so it is 100%. Cosmetically an 8 out of 10, normal minor scratches and dusty. Amplifier is a VJ-90, 1970ï¿½s company now out of business. Functional 6 out of 10. Transmit amp and auto T/R switch are fine, preamp dead. Never needed, TS-700A receiver is very good. Have original hand mic but element is dead. Includes manuals for TS-700A, no manual available for amp.
$275.00 firm plus shipping.

Kenwood TS-660 15, 12, 10, 6 meter transceiver. USB, CW, AM, and FM, 8-10W in, 4-5W out. Cosmetically an 8 out of 10, normal minor scratches and dusty. Includes MC-85 microphone, missing foam mic cover, MC-43S mobile microphone with up/down VFO buttons, Astron RS-12 power supply, memory backup "wall wart", and manuals. Has SSB filter but no CW or AM filter.
$325.00 firm plus shipping.

Heathkit SB-401 transmitter. Includes transmit crystal pack. Cosmetically an 6-7 out of 10. Normal chipping and some scratches on paint. Very little rust. Old masking tape residue on front panel. Missing top cover on RF cage. Unit is complete but I bought it and never tested it. I will include a Heathkit SB-400 replacement manual and a used mic connector for your mic.
$150.00 firm plus shipping.

All items I try to represent honestly as to true condition. Except for the Heathkit SB-401 which is sold As Is, all equipment is functional as described but no warranty is offered. If it arrives DOA, I will consider returns at 100% refund of all monies.

Shipping is real cost, no extra for packing but will be shipped insured. I use USPS but will ship Fedex at buyerï¿½s request plus the real cost for Fedex shipping. Check or money order, I will accept COD, but I will add COD charge to the shipping cost. US buyers only, no international or US territories.

If you have any additional questions, please contact me by e-mail or evenings at home. My call is good in current call books within the last 4 years.

Source record: 73583
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.antenna,rec.radio.amateur.equipment

The antenna they call a G5RV is simply a dipole antenna, 102' feet long, with about 32' of ladder line feed in. Some people attach the ladder line to coax and bring that into the shack, some just feed the ladder line into the shack - I've tried both and settled for just using the ladder line to my tuner...works like a champ.

With a tuner (it need not be an expensive one - check MFJ) you can run all ham bands with this antenna and it's very cheap to build. Don't buy a commercial version - try building your own - it's a lot of fun and you'll learn a few things that simply writing a check wont teach you. :))

Hope this helps...

John

> Do you think that a 2-meter handheld transceiver is a good place to start?

Not really. They're OK if you live close to some repeaters but batteries can be a problem. I'd check some hamfests <http://www.arrl.org/hamfests.html> for a good used mobile rig that'll run off a car battery and put out 20 to 50+ watts; but first get a copy of the ARRL Repeater Manual and see if there are any "open" repeaters in range. Many repeaters are using subaudible "PL" tones so you need a transmitter that provides them to access these repeaters.

Welcome aboard!

I have a Motorola Micor Repeater
Well, I think it's a Micor Repeater.
Looks like everything is there. No Duplexer.
Old looking and filthy.
I bought alot of items at auction and this was included.
Was told it is a VHF Repeater.
It's in a cabinet with no doors.
And I have no idea if this boatanchor works.
As is where is, in NJ.
Price: 99.00

I am looking to upgrade my HF/VHF Station. I am considering-

Yaesu FT-847
Yaesu FT-100D
ICOM IC-706MkIIG

Although Kenwood is suppose to be coming out with a competing rig, but I understand no model or date has been announced.

Mobile is not important, but which would you choose and what functionality and reason led you to the choice/preference.

Thanks

Dennis WB3KUM/9

Bought from estate sale ~3yrs ago. Works fine. Cosmetically quite nice
for a 35yr-old piece of equipment. I have some new things for it from
Drake (like screws, knobs?, etc.) for REALLY making it look nice that
I've yet to put on it. That's included in the deal.

I'm selling it because I haven't even had up an antenna for several
months and other things around the house are taking all my time.

$550 + UPS from Colorado Springs.

Wayne,
Learn to read. This is a 2970 (100 watt model) not a 2950. While you may be able
to get a 2950 for $250, I don't think you will find a 2970 new for $250.

Thanks for wasting bandwidth with your non-constructive comment

I have the following tubes for sale.
==========
1. GS35B - $120.00 1.5kw to 1000mhz
For specs see this Link
http://home.iae.nl/users/pe1ogf/gs-35.htm
2. 4CX1600U/GS23B - $180.00 1.5kw to 1000mhz For specs see this link
3. http://www.qsl.net/ut7ct/gs-23b.html
GS36B - $90.00 great 440 mhz tube
For specs see this link
http://www.qsl.net/ut7ct/gs-36b.html
4. 4CX800A/GU74B - $200.00 matched pair. HF and 2 meters pair= 1.5KW For specs see this link
http://www.qsl.net/ut7ct/gu-74b.html
5. SK1A sockets - $39.95 ea. These are the sockets for the 4cx800a/gu74b Svetlana tubes. They are brand new, never used. The very same socket sells elsewhere for $59.95
Shipping on most orders is $10.00
==========
All the tubes are Svetlana brand, unused, and are in great condition. All are guaranteed to arrive in great shape and to not be DOA. For more info please see my website, and if you have any questions, I will be glad to answer them if I can, just send me an email. Thanks for your time and 73.

Tom,

Astron is really good about parts and customer service. I've even
purchased entire regulator boards from them for a very reasonable fee.
Give them a call on the phone, ask for a diagram and the price on the
entire board. Then swap it in and get on with your life.

cheers

How precisely cut must a wire antenna be? I have heard about 1/2
wavelength wire antennas, but if the wire must be close to this length,
then you can only use one band or are willing to have several different
antennas. I know that tuners are intended to correct mismatches, but I
have heard that performance does suffer if the mismatch to be corrected
is high enough and that an even bigger mismatch can be too much for a
tuner to handle.

Can anyone shed some light on this? I'm confused.

It depends upon what you want to do with the radio and how close you might be to a repeater. Handhelds are usually capable of 5 watts, but at that power, the batteries die quickly. You can buy a mobile 2 meter new for $179 and with that you would need a small power supply or auto battery to drive it, but it would get your signal out much better. I'm sure you could look around and find a used one for much less than this.

A good antenna matching unit can handle a lot. You could cut for the
lowest band and use a matchbox to tune on other bands. You may want to
go to open ladder line rather than coax for this however as even
harmonics of the fundamental will be feeding into a current node
(voltage peak) and coax loss can be high (well, perhaps not with
hardline!). I had a lot of grief with a vertical, a dipole, and a
folded dipole as a kid. I ended up buying a few LARGE spools of 8 ga
stranded wire - and strung several hundred feet across my parents'
property at heights varying from 30 to 50 feet. It terminated at the
far end into a chain link fence running several more hundred feet
(reasonable DC ground - not safety ground). I ran a Johnson Viking
Ranger I into this thing and worked the world with 65 watts AM and 75
watts CW. I also had one HUGE signal on 160 meters! Nothing like a
lot of wire and a good tuner!

David,
Actually, the story says that the Russian recovery ships are in
contact with the sub via MORSE code, NOT CW. Followup stories have indicated
that the only contact with the sub is via ACOUSTIC means, not radio.
Therefore the form of Morse code being used would be telegraphic Morse code
and not CW.
Minor distinction, but one that should be made if you are going to use
the sub's situation as a rallying point for Morse code proficiency. Either
way, voice contact is out, and Morse is all that's left...

Game Mode
The FT-50R includes an interesting "game" that's programmed into it. Here's how it works:
1. Power up the radio while holding down the MR key. (PWR + MR).
2. The display will show GAME on the left side, and Spd 1 on the right. You're in game mode!
3. By rotating the knob, you can change the speed of the game. Higher numbers are faster.
4. Press PTT to start the game.
5. Numbers will start to scroll across the screen from left-to-right. As they come, you are supposed to push the number on the keypad that makes a sum of ten, followed by F. Example: 6 appears, press 4, F. If 0 appears, enter 10 followed by F.
6. The game is over when the screen fills up with numbers.
7. To exit the game, simply cycle the power.

Go with either the Yaesu FT847 (P3D Sat due to launch soon) or the Icom 706.
While I'm sure that the Ft100D is a fine radio, it sure seems to draw a
whole lot of criticism due to failures

Hi all. I have five nice items on Ebay for sale. The auctions end
Sunday August 20, beginning at around 18:30 (6:30 PM California time):

Drake R4-C: LOADED and fully updated:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=411060066

Drake T4X-C: Super Powerful:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=411085258

Astatic D104 Night Eagle:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=411041657

Drake AC-4:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=411002050

Drake MS-4:
http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=410979461

All items are fully satisfaction guaranteed.

Thanks for your interest and good luck with your bidding.

Neil

This is somewhat "Off Topic" but it brings up a question that I've always wondered about. Can one use Ladder line on a sided house with storm windows???? I understand that the desire is to keep the line away from metal whenever possible.

Thanks ..... John

4911. Battery charger question

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-17 00:00:00 UTC
From: Joel Seidman <joel_seidman@NOSPAM.appsig.com>
Message-ID: <399C4093.F8D5A30C@NOSPAM.appsig.com>
Source record: 73526

This isn't exactly amateur radio, but thought someone would know. (If there's a better news group, please let me know.)

What is (or should be) the difference between charging a NiCd and a NiMH battery? I have one charger for AA and AAA batteries that has a two-position switch, labeled NiCd and NiMH. I have assumed the switch should be in the correct position, but I would like to know what it does.

I also have a charger for camcorder batteries that does not say anywhere what kind of battery it is for. It has no NiMH/NiCd switch, but I bought it at a time when NiMH was not very common. My real question is, can I use that charger on the newer NiMH batteries without damaging either the battery or the charger?

Additional info. I measured the charging current with a NiCd and it was a steady .6 amp while the charge light was on, then dropped to 10 ma. when the charge light went out. (The camcorder uses 1.0-1.3 amps when on.)

The charger does have a switch labeled Quick/Normal. That does not have any affect on the charging current. Should it?

Thanks for any educational information.

> and not CW.

Moot mode on:

I doubt the news media knows the difference between landline Morse
and Continental (International) Morse. Morse code is Morse code to
them. Continental Morse is what the military and amateur radio op-
erators use(d) in radio communications (i.e., what we call CW) and
it's highly doubtful if any of the stricken sub's crew knew acoustic
(landline) Morse.

CW is a misnomer in radio unless you're transmitting A0. The idea
of the term CW was to separate it from damped wave (spark) with the
exception of Poulsen and other similar arc machines.

Moot mode off.

> Minor distinction, but one that should be made if you are going to use
> the sub's situation as a rallying point for Morse code proficiency. Either
> way, voice contact is out, and Morse is all that's left...

Excellent point. Wonder what we'd use if this situation occurs 200
years in the future when all this Morse stuff is most likely long
forgotten. PSK31 in a brain implant?

They come with Kenwood software (available at Kenwood site), most contest programs support it also (freq readout, band changes, tuning)

Get Inrad 2.1 kHz filters for it and you will have superb radio.

The Yaesu VX-1R and VX-5R can be easily modified to transmit in that range (MARS/CAP mod), but I probably don't need to remind you that such activity would be illegal. I have used a modified VX-5R to transmit to my FRS radios (using the lowest TX power setting of 0.3 W to conform to the rules for that band), and it works fine. The VX-5R is a very sweet little unit, too!

>

Many 440 rigs do not work well outside the band. This includes transmit and receive. A list of these was published in a FRS forum earlier this week. Not only is the transmit power down, but receive really suffers.

Someone recently tested an amateur RF amplifier between the two bands. On 440, it delivered 25 watts with two watts input. On GMRS, two watts in gave five watts out.

I vote for the Pryme. It's legal, and you'll appreciate the improved performance. Especially on receive. High power helps very little if you can't hear the responses coming back to you!

73,
K5PF

4935. FT-50R Question

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-17 05:12:25 UTC
From: n9mxt1@aol.com
Message-ID: <20000817011225.29220.00000500@ng-cp1.aol.com>
Source record: 73512

Hello,
I just picked up a new FT-50R and when I first turned it on it seemed like a game appeared on the screen. Does the unit have a game built into it? I studied the entire manual and it says nothing about a game inside it.

If the unit does have a game how do I get back too it and play it?

Please let me know.. also what do you think of the units performance?

Thanks
Jeffrey

4936. FS Rohn 25G 50ft with Thunderbird TH3-Mk2 tri-bander

Newsgroup: rec.radio.amateur.equipment

Source record: 73462
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I just finished going through 2 170's (one was an "A"). The LO appears to me to be a real culprit in the ones I've been associated with. A scope is almost a requirement to check if the first and second conversion oscillators are OK. I'm told that there are also 2 of the IF cans that go out with some regularity. When I was selling off one of my junkers, I got quite a few responses to one or two of the cans. One of ones I just fixed had a bad conversion oscillator crystal. Luckily I had one, on hand.
To reiterate, if the B+ voltages are OK (the difference in the glow of the VR tube is probably OK. Mine does that when going to standby. Reason: Load on circuit drops, voltage across VR tube changes.), proceed and ensure that the oscillators are functioning. On 160 and 80, only the 6C4 is oscillating (diff req for each band, of course). Above 80 meters, the second oscillator portion of V3 comes into play. Its a fixed freq of 2.580 MHz. After that, it gets down to injecting a signal at Pin 1 of V4 (455 kHz) and checking the IF and audio chain. Then back to the antenna with an appropriate input signal for band/frequency. Another set of hints can be found at the BAMA website.
ftp:bama.sbc.edu/downloads/hammarlu/hq170txt/hq170.txt (I think that's correct), or just search on bama+hammarlund. Good luck with the project.

For those others also looking for base sections for old HyGain towers---I've moved mine three times and had to purchase new bases each time....Since HG has been bought by MFJ you may have noticed that their latest ads say "towers" too. I called and asked them if they were going to be fabricating parts for their old towers; they said they weren't sure yet and were still deciding how to provide drawings/specs for parts/bases to customers. Would recommend you call them and add to the pressure for them to continue supporting their old models. BTW, the tolerances on the bases are VERY close so think it would be difficult to homebrew one and most likely pretty expensive to have one fabricated in a machine shop....then again the last base I bought from them cost $325 just before they "went out of business."

4946. FRAUD ALERT: Scander Astfan, WS2W

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-18 00:00:00 UTC
From: k5dh@raytheon.com
Message-ID: <f6bn5.85$qz3.11729@bos-service2.ext.raytheon.com>
Source record: 73467
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

FRAUD ALERT: Scander Astafan, WS2W

I bought a Kenwood TM-2550A 2m FM transceiver a few days ago from WS2W through an ad on "rec.radio.swap". He told me that the radio was in good condition, in working order, and that it had the TU-7 tone board installed. I paid right away, and he shipped right away. The radio is in good cosmetic condition and everything works except for the receiver. The receiver is virtually deaf! Not only that, but there is no tone board installed, AND the pins of little SIP socket where the TU-7 is supposed to plug in has been soldered to, and the pins are bent and covered in solder (making it unlikely that a TU-7 would plug in without me having to replace that socket). When I wrote back to him about it, he more or less blew me off. Here are excerpts from two of his email responses:

"The 2550A comes stock with tone board installed. I used that rig for 4 years and always received excellent reports as I did the day before I sent it to you. Are you looking for a K Mart guarentee?"

"I never guarenteed any part of that radio! If you don't like it for whatever reason..You sell it.. Its yours. You want the world for $125"

We went back and forth a few times, and he maintained that the radio had always worked fine for him, but never addressed the issue of the missing tone board. I don't want "a K-Mart guarantee" or "the world for $125"; I just want what I paid for... a working radio with the tone board installed (which, by the way, was an OPTION, not standard equipment). It's true that the transmitter works fine, and I got an "excellent report" on my transmitted signal. The problem is not with the transmitter, it's with the RECEIVER. He never really addressed that issue in any of his responses either.

A few days ago, Scander posted a message to "rec.radio.swap" advising people to watch out for me, K5DH. Those of you who've been around the amateur radio newsgroups for a while know me and my reputation, which speaks for itself. I know many of you don't like eBay, but my eBay feedback is also worth a look if there's any doubts about my integrity.

I would think twice about dealing with Scander Astafan, WS2W! I am now stuck with an unusable radio that I'm going to either have to try to troubleshoot myself, or pay someone $50 per hour to troubleshoot, and I'll still have to come up with a TU-7 tone board to be able to access our local repeaters (including our Skywarn frequency, which is my main reason for being on 2m in the first place).

It's been years since I've been screwed on a radio purchase. Perhaps
I was due. That doesn't mean I have to like it!

4951. Kenwood TM-261

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-18 00:00:00 UTC
From: Robert.Mauritz@amermsx.med.ge.COM
Message-ID: <654C80DB9D71D11199750060B0670BF50C030B5C@uswaumsx04medge>
Source record: 73472

I have used the TM-261 for AM aircraft reception, and it is only fair,
at best, for that application. This transceiver was designed primarily
for the 2 Meters Amateur Band. The AM sensitivity is not very good.
To hear incoming signals, I have had to keep the squelch wide open.
If you intend to scan for aircraft stations stored in memory then,
the rig will stop at each of the much stronger, non-AM stations.
For 2 Meter FM use, the TM-261 works very well, though!

Source record: 73480

I have a really nice, like new Icom IC-2410H 2 Meter & 440 MHz Dualband Mobile Transceiver for auction. Its compact design allow for easy installation and operation. It is easy to use and has most of the features that hams require.

The display is LCD with amber backlighting, has PL Encode, Repeater Offset, 35 memory channels total, Scanning features, Duplex mode (Where you can listen to 440 MHz while transmitting on 2 Meters), Full Duplex Cross-Band Repeater Mode, has cooling fan on back and more!

Receive frequency coverage: 136-174 MHz, 320-479 MHz, 830-950 MHz (No gaps)

Transmit Frequency Coverage: 144-148 MHz & 440-450 MHz

Comes with DTMF Hand Mic, Power Cord and Manual.

It will be ending in a few hours and there is NO reserve. The price is very reasonable at this moment.

Please visit:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=407100290

Thank You & 73,

Mike KQ6MU

hmmm. normally I don't like spleen venting on the newsgroup, but I have to admit, my attitude with selling anything, garage sale, ham gear, children, etc., has been, if you are not happy, bring it back and I'll give you your money back.

Money isn't worth that much -- but in my 45 years, I have stopped being amazed at how low some will stoop for money (and politics).

Take a big stake and drive it through the rig and nail it to your wall-- this will serve as a constant reminder that snakes do live in the tall grass.

4961. Help - IC2800H

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-18 00:00:00 UTC
From: Daniel Allen <danallen@nospam.valvesunlimited.demon.co.uk>
Message-ID: <966622964.13262.0.nnrp-13.d4e55323@news.demon.co.uk>
Source record: 73482

Hi all,
Can anyone tell me how to reset this radio to "factory" settings, as I bought it ex Demo, and it has been "played with".
Don't say look in the manual, because I have not got one yet, I am waiting for Icom to send me one, but would like to have a play with it before I get the manual.

Many thanks

Reading in "Modern Manners; Etiquette for Rude People" by P. J. O'Rourke:

Henry Beard, one of the founders of the National Lampoon magazine and America's premier living expert on playing with food, has a great stunt with stainless-steel hinged-top coffee creamers. Using his thumb to move the creamer lid, Henry gets "Carl the Creamer" to talk. Carl (he speaks in a very high voice) says, "Henry, I'm hungry." Henry feeds Carl all sorts of things -- sugar packets, bits of squashed-up food, cigarette butts, and so on. But Carl always eats too much. "Henry, I feel sick," he says. The Carl throws up on somebody at the table whom no one can stand.

If you were not happy with a purchase from me I would refund your money with
a smile.
:-)
I try to buy from people that I think are going to be around for a while,
like Murray, Tom, Hamtrader (K5JOE) <--ME. and others that frequent the swap
pages. I hate that you got a bad deal and I guess in my opinion, YES, you
should have gotten a K-MART warranty!! How many other rigs do you think that
he is going to be able to sell if he will not stand behind his equipment.
That is just my opinion.
I know there are 2 sides to every story, but if he said there was a tone
board in it and there was not, that is worth about $50.00. That is wrong.
You need to buy from my listings. I give a K-MART Guarantee. (not a tail
light warranty).

Daniel, what kind of factory settings are not in the radio now? If you have extended receive or transmit and do not want them, just do not program those freq. in for transmit.
I have two of the 2800H Icoms and love them.
What does yours have in it that is not desirable?
I can help you, if you tell me exactly what you are wanting to do,, in complete sentences and paragraphs... I have never been any good at that either... :-)

4997. HT recommendations needed for two young newcomers

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-19 00:00:00 UTC
From: petervndrs@my-deja.com
Message-ID: <8nlehk$3s9$1@nnrp1.deja.com>
Source record: 73418

I have two young sons (12, 14) who recently passed the certifcation exam here in Canada. I want to equip them each with a decent handheld (single-band, dual-band?) handheld transceiver and am consequently in desperate need of suggestions and/or opinions. In this part of the world the consensus seems to lie with Icom and Yeasu gear.

I do know that I want a scan function and operation from a charger (some I know will not operate from the charger). I also know that there is a wide price spectrum and have heard that the Yeasu VX-5R is a unit of some popularity (people in one store here say that there is a waiting list).

Any direction on this matter would be most appreciated.

PS: while I have my own ticket I have never operated VHF/UHF.

Sent via Deja.com http://www.deja.com/
Before you buy.

4998. Help- need data on Sony SW-1 Shortwave

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-19 00:00:00 UTC
From: kaboom@writeme.com
Message-ID: <kaboom-1908000155490001@pool0001.cvx28-bradley.dialup.earthlink.net>
Source record: 73419

Hi, all. My beloved Sony SW-1 pocket digital shortwave suddenly went nuts after not having been used for about 6 months. It sounds like motorboating, but it seems to be coming from the front end or IF stages. I've already tried the obvious "jump the electrolytics" stuff with no results.

The CPU and synth appear to be working. I'm a skilled tech and could probably fix this if I had a schematic. Anybody got one? This set is over 10 years old. It's my personal set, and I really want to get it going again.

Thanks!

Sincerely,
Michael, KB1UM

Dean, be happy, dude. At least you got a radio that basically
works. Lots of guys pay big bucks and dont get SHIT in return.
I know you Dean...You're a wheeler-dealer.
Seen you in action for years at the local
sidewalk sales and Hamcom. I think you're whining a bit. The
original add said nothing about a tone board being included.
And, I know you work for Raytheon, so, you HAVE to be smart
enough to know how to use a little flux remover and a
soldering iron to clean up that ten cent tone board interface wire.
Common sense says "Caveat Emptor"...what do you expect in this
day and age?

I have a Motorola Micor Repeater
Well, I think it's a Micor Repeater.
Looks like everything is there. No Duplexer.
Old looking and filthy.
I bought alot of items at auction and this was included.
Was told it is a VHF Repeater.
It's in a cabinet with no doors.
And I have no idea if this boatanchor works.
As is where is, in NJ.
Price: 99.00

5008. handheld RF output vs supply voltage

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-19 00:00:00 UTC
From: Zsylvan+noZs_0008@cyberhighway.net
Message-ID: <8nme3m$o7f$1@news.cyberhighway.net>
Source record: 73429
Cross-posted to: alt.ham-radio.vhf-uhf,rec.radio.amateur.equipment

Obviously it is a positive relationship between supply voltage and
RF output power for the typical handheld. But is that relationship
basically linear? Log? ???

So for example, my alinco dj-v5 is rated about 5watts on 13volts, and
some places claim up to 6watts for it at 15v to 16v (the max). It also
has 9.6v and 6.0v rechargable packs, and a 6v alkaline pack (in which I
typically use 4xNiMH for about 5v). Given the three selectable power
output levels (HI,L1,L2), what should I expect output power to be given
the different supply voltages?

Hey Jeff,
I have a ft-50r and yes it does have a game built into it, and you can turn it on and off, look up the radio mods in qrz for the complete description on the handheld I printed up themods and followed the dierctions and it works, the mod is listed under "Yaesu FT-50R Guide V1.1", the HT works great for me and I like it alot the only draw back is the FM broadcast band sound sucks but I'm sure you didn't buy it just to listen to music, good luck with the HT. Thanks Ted KE4TTE.....

> waiting list). ...

I just got my ticket as well, and I chose the VX-5R as my starter transceiver. I was attracted to the tri-band feature, the wide receive range, and the small size and ruggedness of design. I paid $320 a couple of weeks ago, and I got it right away (from Austin Amateur Radio Supply, www.aaradio.com).

While it is definitely a VERY nice little unit, I found that:

a) there is basically no activity on the 6m band in my area (I receive nothing at all in that band), along with the fact that the antenna with the 6m band extension is inadequate (and is outperformed by the $10 Radio Shack telescopic whip on MF and HF receive), making the 6m band feature essentially superfluous in my case.

b) I like the MF and HF receive capability. With the Radio Shack antenna (a bit clunky with the SMA-BNC adapter on such a small radio), the shortwave and AM radio reception is reasonably good (but not with the supplied ducky), but I find that my Sony SC1 scanner ($90, but discontinued despite its excellent performance) works much better in the VHF and UHF ranges, and fills in all the holes that the VX-5R leaves out. The VX-5R does not pick up TV band at all, while my SC1 scanner picks it up very easily with its stock rubber ducky antenna. You may not care about this.

c) It will not transmit at anything more than the lowest power setting, 300 mW, with the supplied AC adapter/charger. The unit is designed to shut itself down when the input power dips too low in order to protect the microcontroller, and this regularly occurs while attempting to transmit at higher powers with the AC adapter. The charger is rated at 500mA output, so it is obviously not intended for use while transmitting. You would have to use a meatier power supply for AC operation.

This radio has many features (check out the review at StrongSignals.net), but may not exactly meet your requirements. I understand that the Yaesu FT-50R is an outstanding dual-band HT, and is at least $70 less (important

if you're buying two...I am familiar with that because I have twin boys). Besides the Yaseu HT's, I'm sure that Icom and Kenwood, among others, would offer some nice gear as well; I'm not familiar with specific units, though, so I can't offer you any advice in that area. I would say that dual-band would be the best way to go, since that would guarantee a wide range of repeater availability, and many different dual-banders are available.

73,
Doug

I have 1 of the type M68729 class C (i.e. FM) 30 Watts out average, 40 Watts max. These will replace older M57774 modual just fine. The input drive is 300 mW for 30 watts out. I am asking $50.00 including shipping to conus for them. RF parts wants around $70.00 for the same.

These are brand new never been used and still have the one inch leads on them.

Thank You,

Bryan Fields, KB9MCI

Sounds like Scander screwed Dean to me....whats his email Dean? Lets ebomb him!!! Or better yet, lets send him back where he came from!! SCANDER, take that radio back or be besieged!!! "Mad Dog Murray" PS Thanks Dean, I need someone to VENT on!! M
"Dean Hemphill, K5DH" wrote:

FRAUD ALERT: Scander Astafan, WS2W
I bought a Kenwood TM-2550A 2m FM transceiver a few days ago from WS2W through an ad on "rec.radio.swap". He told me that the radio was in good condition, in working order, and that it had the TU-7 tone board installed. I paid right away, and he shipped right away. The radio is in good cosmetic condition and everything works except for the receiver. The receiver is virtually deaf! Not only that, but there is no tone board installed, AND the pins of little SIP socket where the TU-7 is supposed to plug in has been soldered to, and the pins are bent and covered in solder (making it unlikely that a TU-7 would plug in without me having to replace that socket). When I wrote back to him about it, he more or less blew me off. Here are excerpts from two of his email responses:

"The 2550A comes stock with tone board installed. I used that rig for 4 years and always received excellent reports as I did the day before I sent it to you. Are you looking for a K Mart guarentee?"

"I never guarenteed any part of that radio! If you don't like it for whatever reason..You sell it.. Its yours. You want the world for $125"

We went back and forth a few times, and he maintained that the radio had always worked fine for him, but never addressed the issue of the missing tone board. I don't want "a K-Mart guarantee" or "the world for $125"; I just want what I paid for... a working radio with the tone board installed (which, by the way, was an OPTION, not standard equipment). It's true that the transmitter works fine, and I got an "excellent report" on my transmitted signal. The problem is not with the transmitter, it's with the RECEIVER. He never really addressed that issue in any of his responses either.

A few days ago, Scander posted a message to "rec.radio.swap" advising people to watch out for me, K5DH. Those of you who've been around the amateur radio newsgroups for a while know me and my reputation, which speaks for itself. I know many of you don't like eBay, but my eBay feedback is also worth a look if there's any doubts about my integrity.

I would think twice about dealing with Scander Astafan, WS2W! I am now stuck with an unusable radio that I'm going to either have to try to troubleshoot myself, or pay someone $50 per hour to troubleshoot, and I'll still have to come up with a TU-7 tone board to be able to access our local repeaters (including our Skywarn frequency, which is my main reason for being on 2m in the first place).

It's been years since I've been screwed on a radio purchase. Perhaps I was due. That doesn't mean I have to like it!

73,
Dean, K5DH

5036. Neutec SM-1645H Programming Help

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-19 03:16:07 UTC
From: Jeff Camp <jcamp2@home.com>
Message-ID: <399DFBE3.7F012571@home.com>
Source record: 73410

I recently picked up 5 Neutec SM-1645H radios from a salvage place and am looking for manuals on how to program them to cover 2 meters. I know they are capable since the current programming includes some odd splits on either side of the 2m ham bands.

Any pointers to information would be very much appreciated.

73,
Jeff

5037. WTT ThinkPad 600X for HF Rig

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-19 03:38:27 UTC
From: Sam Cederas <k4oc@juno.com>
Message-ID: <j60sps8hfc44jr5ah2r9ljve44hot211qr@4ax.com>
Source record: 73411

I have a new in excellent condition IBM ThinkPad 600X. Has 64meg
memory, 12 gig HD,24x-ROM drive, floppy drive,usb port,IR Port,
battery, power cord, and of course a Pentium III 500Mhz Processor!
You can view the specs and picture
http://www.pc.ibm.com/europe/europeglobalthinkpad/thinkpad_600_highlights.html
MY description is not doing this thing justice. I am leaving out a
lot. Also I will throw in a 3COM Megahertz 10/100 LAN PC CARD and
driver diskettes.

I will accept offers to trade for an HF rig. Must be a current
production model HF rig. I have an TS-430s and want something
current!

I all ready have one laptop and and two other Pentium 600 Mhz home
pc's.

Anyway...I am not listing this on Ebay..this is not an auction. I
want a current top model HF rig and am willing to part with one of my
puters.

thanks.
Sam Cederas K4OC

5038. dj-v5 programming cable/protocol (dj-195?)

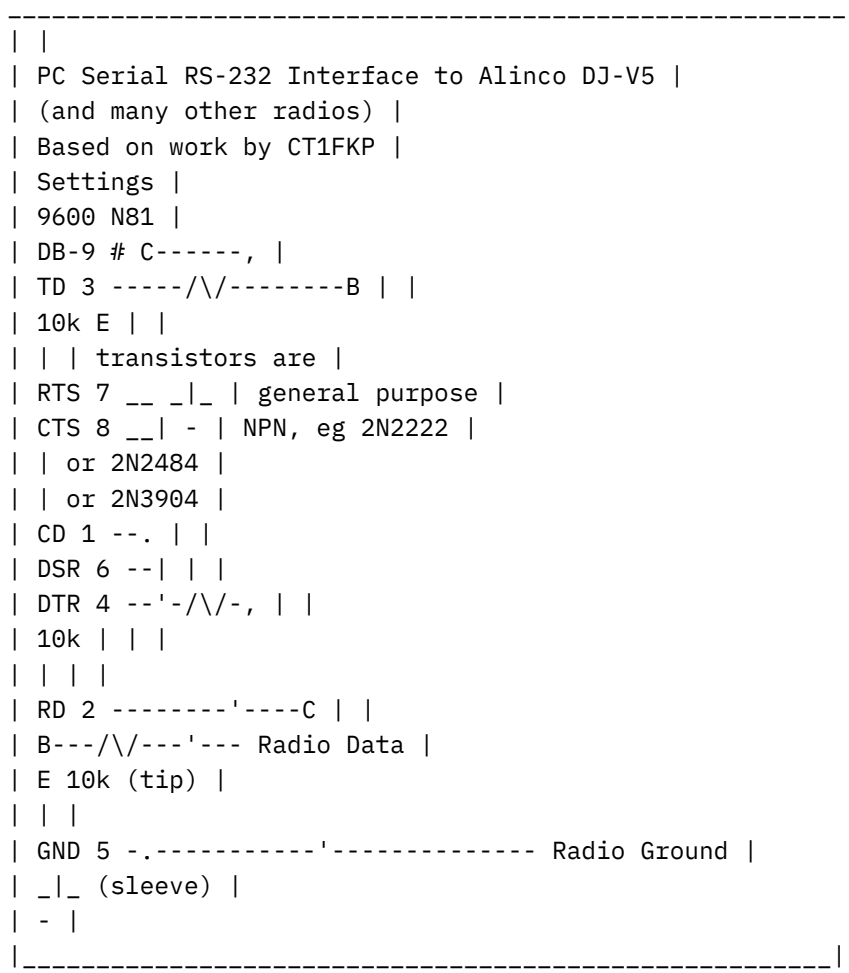
Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-19 04:14:05 UTC
From: Zsylvan+noZs_0008@cyberhighway.net
Message-ID: <8nl1id$nt1$1@news.cyberhighway.net>
Source record: 73412
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.equipment

Followups directed to rec.radio.amateur.homebrew

I'm slowly making progress deciphering how to connect the Alinco dj-v5 to a PC serial port. I want Linux commandline software, and both Alinco and RT Systems (who provides a cable and windows software) were unhelpful. FYI: http://www.rtsars.com/ Their package is for the dj-v5 and the dj-195, so maybe this cable works for both?

I've figured out a cable that seems to work. Very simple, two transistors, three resistors. It plays a few tricks.... :)

I don't know if it is compatible with the RT software since I have never seen their stuff. The following diagram must be viewed with a fixed-pitch font (e.g. courier) otherwise it will be a mess. It should appear enclosed in a box with aligned top, bottom, left, right borders.



As for the communications protocol, that's more difficult! :)
All I know so far is the sender init transmission sequence:

From sender prefaced with: >
From recver prefaced with: <
all lines end with carriage return (CR)

>AL~F0000W66008103000003020100001500011201
<OK

and when the receiver doesn't respond with OK quickly enough:
>COM ERROR

Does that look familar to anyone?
What comes next?
How does the receiver initiate the transfer?

I'd appreciate any help or encouraging feedback. :)

This was posted a few weeks back and we thought the rig was sold but the proposed buyer never came through so here it is again.....

A friend of mine asked me to help sell his HW-101, Manual, Matching speaker, Matching AC supply, and Turner "Plus 3" desk mic. No Mods. The rig has been in storage for years and looks great! A couple of small scratches on the top cover,
other than that, it looks brand new. Haven't tried it on transmit, but receive works ok with exception of some noisy pots and wafer switches. Great for collector wanting one that would be easily restored to mint condx. Asking $200 + shipping.

Email offers to: dausley@hiwaay.net

a
> prelude to a formal statistical analysis being planned. Any ideas would be
> welcomed.

OK.

Hamfests: Attendance is way down across the board. Dayton down by 3000

Radios: Still way way overpriced for what is inside. Dealers cryin the blues
Inventory not moving, esp HF rigs. Who in his right mind would
spend
$1500.00 (or more) for a HF ham radio, which inside is put
together no better
than a $85.00 Korean VCR? Put that cash towards a new car or
a vacation
in Europe.

Hobby: Dying on the vine. Literally! SK in QST is up to 1.5 pages per
month. No new
people (young people - meaning the target market of youthful
white males)
comming into the hobby. Who wants to bother stringing up
antennas, learning
stupid morse code and paying average of $1100-1700 for HF
gear - just to talk
to a bunch of old men?? Young people want the INTERNET. Ham
radio is
both obsolete and humorous in it's self-admiration and
self-serving imagined
importance in the scheme of things.

Future: Ham radio will be DEAD by 2010-2015. ALL freqs above 220 mHz will
have been
allocated to emerging wireless technologies before then, around
2005-7.

in short: STICK A FORK IN IT FOLKS - THIS TURKEY IS READY FOR CARVING!

Sounds like somebody who's upset because they couldn't pass a test upgrade so he's stringing about some sour grapes.

One thing's for sure, if the number of people dwindle, it will be a fact thrown right in the face of the p.c.t (pro-code test) crowd that has been hollering that the bands will just fill to the brim with low-class people. It's funny how everybody who has a view or an angle on the hobby casts predictions to support THIER belief, and it generally conflicst with not only other's of the same sort of negative tripe but often has no basis on reality OR in current market trends.

Go back to your t.v. and turn on your sony playstation. Make the little man jump over the cute little flying boxes.

You have read the nomenclature incorrectly. It is not a DC capacitor. It is 155-189 mfd @ 50 WVAC. Important difference, and the reason they are hard to find. Grainger, or any Air Conditioning or Motor supplier will have a suitable, but likely physically larger, and probably higher voltage rating replacement.

5063. My Icom 706G Smoked! Which repair facility?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-20 00:00:00 UTC
From: Benjamin Blavat <bblavat@bellsouth.net>
Message-ID: <JqSn5.233$Mw.1867@news2.atl>
Source record: 73372

Hi and thanks for reading,

When I turned on my Icom 706G yesterday, the relays clicked and no display
I looked behind my seat at the main unit to see atiny bit of white smoke!
power off didn't help I had to remove the power cord. Unusual to this
installation (I've had 3 706's nothng ever went bad!) is the Clear Speech
speaker drawing off the accessory plug on the 706. The internal fuse had
blown last week and I replaced it with one from the extras Icom includes!

So my real question there are two repair facilities one in Irvine,
California and the other in Bellevue, Washington which is the superior one?
Any suggestions?

Thanks again,
73's from W4BEN,
Benjamin Blavat

Ben, go to my website and get the phone number of Sott Malcom and call him monday.
He can let you know if he is a warranty station for your rig. He is the best radio tech. I have seen so far.. He will talk to you on the phone and give you some good advise, whether he fixes it for you or recommends someone else.
73
Give him a try, you will never go to anyone else for repair. The Icom America Tech I called the other day said he was the "ICOM GURU".

I don't think that its the case. What he stated are pretty much facts
that have nothing whatsoever to do with the "P.C.T.". I hear this from all
over the hobby, pro and anti-cw. Fact is, for years you could enjoy hf with
a 5 wpm cw test. It hasn't saved the hobby. Don't get me wrong, I have
supported a lowering of the cw requirements to spur some growth, but there
are too many other factors that will contribute to the "death" (whatever
that may be) of ham radio.
Anyways, for a simple written exam and a relatively easy 5 wpm cw exam,
anyone can enjoy most or all hf priveleges now. If ham radio dies at this
point, the P.C.T. crowd is not to blame, the blame I think should rest on
all of us for not promoting the hobby more.

he is highly recomended by Orin at Icom Tech Support
I have used him many times Good Guy!

5068. CONSUMER ALERT - Beware of Eucalypt Software - Makers of Autopost & Rocketfuel!!!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-20 00:00:00 UTC
From: Warning-Warning@pdkmvhrmx.edu
Message-ID: <0A00ACA2.owfixazex@wphxphker.org>
Source record: 73377

Eucalypt Software - Makers of Autopost & Rocketfuel --- Ripped Me Off!!!
-
All potential buyers should be warned to steer clear of this company. They have a repeated pattern
of ripping people off and ignoring requests for support.
-
I know someone who sent in the $10 registration fee for Autopost TWICE (thinking the first one may
have gotten lost) and in both instances, never got a registered version of the program and all of his
emails were completely ignored.
-
I myself purchased Rocketfuel on-line and had to pull teeth to get an unlock code. The web site was very
quick to take my money, but no registration/unlock code came for days and days. I repeatedly emailed them,
only to receive nothing but autoresponses. After 5 days I sent them a message stating that if I did not have
a working version of the program by the close of business that day, that I would challenge the credit card
charge. Magically, the code arrived several hours later.
-
What kind of way to do business is that?
-
In any case, its academic... there are other products available for free that do virtually the same thing
and I only wish that I had known about them before I wasted my time with Eucalypt Software.
-
If your in need of automatic news posting software, there is nothing better than "NNTP Power Post 2000".
It's graciously been made available free from the following web site:
-
http://net-toys.8k.com/
-
Save your money... your time... and the aggravation!
-
Peace,
-
PPN
-
-
PS: I have no affiliation with the makers of PowerPost 2000.

>in Europe.

You forget one thing: economies of scale! If manufacturers of ham equipment sold as many rigs as they did VCRs, then the price would come way down-it's basic economics.

> Hobby: Dying on the vine. Literally! SK in QST is up to 1.5 pages per
> month. No new people (young people - meaning the target market of
>youthful white males) coming into the hobby. Who wants to bother
>stringing up antennas, learning stupid Morse code and paying average
>of $1100-1700 for HF gear - just to talk to a bunch of old men??

Morse code is now limited to 5 wpm which you could learn in a no time. Granted, CW should have been deleted from the requirements but the regulations change at a snail's pace.

>Young people want the INTERNET. Ham radio is both obsolete

True, even hams love the Internet, no secret there. And yes, it is obsolete, we're doing the same thing we did 30 years ago exactly the same way. No technological advancements.

>and humorous in it's self-admiration and self-serving imagined
>importance in the scheme of things.

Here you show how envious you are. Looks like you would love to be a ham-if you could only pass the test!

> Future: Ham radio will be DEAD by 2010-2015. ALL freqs above 220 MHz will
> have been allocated to emerging wireless technologies before then, around

Source record: 73381

I took it one step farther by creating my QSL image in Microsoft Access (database). Using Vhf-dx I can export the QSO information to a file that I can read into Access. All that is left to do is look up the address on CD-ROM or QRZ, type it in and print out the card (both sides). Slap a stamp on it and drop it in the box.

My next step is to write a procedure in access to directly access the address info from CD-ROM or via a website directly into Access so I don't have to retype it in.

There are countless possibilites as you can now see.

- MC-50 Microphone
- Operation Manual

Very good cosmetics, excellent electronics - 100 watts out on all bands.
This is a clean 820 that has seen excellent care.
I will sell it all for $475.00 + shipping from 97006

Photo available.

Thanks,
Rick

Steve,

Most car audio/stereo installation shops would be glad to give you the info
you are looking for. Also, Radio Shack sells replacement plugs for most
Delco radios from that era.

Cheers,
Rick

Source record: 73391

I just got my tech license and am looking to get either the Yaesu FT-8100R or FT-90R. It is my understanding that only the FT-8100R will do "cross band repeat." Is THAT a big deal??? My complimentary issue of QST Magazine that come soon after my license arrived as an article about the UO-14 satellite repeater which would require a cross band radio. Is that (UO-14) an important feature??? Are there other features in either radio that should dictate which one I get?? One comment I read on the FT-8100R said that it does not have direct frequency keying or a tone scan...are these features important?? Any suggestions are sincerely appreciated. :)

http://krasnodar.online.ru/hamradio/sch.htm

I don't read russion, but even before I saw the link to the translator
I could figure out enough just from model numbers and a few guesses.

They have several cable schematics. I like:
http://krasnodar.online.ru/hamradio/icq7a.htm
but most likely you can simplify that even further.
http://www.kb2ljj.com/data/yaesu/yaesu.cat
can have the two radio SI/SO lines connected together and would
probably work fine for your Icom.

Sorry I can't help you with software. Have you checked with RT
Systems? (http://www.rtsars.com/)

No doubt that the internet is more attractive to many and ironically for some of the same reason Ham Radio had it's popularity. While the Code is a obstacle for many there is some satisfaction to learning it. True in today's society and technology it is a dinosaur but God forbid if it ever comes to the need to know it as if that happens then it will be an event like the sunken Russian sub. I don't think it should be required but only for the top Ham Licenses and then the reward for it should be increased bandwidth in the CW bands which in my opinion should be shortened and voice bands enlarged if possible. I don't agree with doing away with the code but all voice privileges should come with theory and rules and regulations rather than code requirements. 5 Words per minute isn't or shouldn't be enough to stop someone but voice privileges should come with theory and rules not increased code.

Will Ham Radio be obsolete ? who knows could be and the pool is dwindling but not beyond being turned around.

Check out ten-tec for the capacitors, there 40 to 500 pF and rated at
3.5 Kv. These are the same capacitors they use in there high power
amplifers and legal limit antenna tuner. The cost for the kit is $39.00
each. the kit information is http://www.tentec.com/tkit.htm Kit no
1207. You can buy two for your tuner and it will work just fine.

Source record: 73248

You don't need to drive a ground rod in your situation.
Use some "chicken wire" fence laid out on the ground, soldered together, beneath the antenna, and connected to the antenna's grounding point.
For VHF/UHF, you only need a few square feet of it. On HF you will need much more coverage. Perhaps a area of about 20 X 20ft. or more. For good performance on 80mtrs, you will need about 60 X 60 ft. area. Just roll out the wire fence on the ground below the antenna, overlapping each roll, & tying them together, for good electrical connection in several places along the "overlapped" areas.
After you get all the wire "mesh" laid out, just put top soil on it to cover it up, and hold the wire in place, leaving only a small area of wire mesh exposed at the antenna's base.
Most "chicken wire" fence is galvinized coated, and can be soldered using acid core solder, clean the joint well, before and after soldering. Leave some wire "pigtails" exposed at the base of the antenna, two or three connections will make a good ground connection.

Since you are on a mountain, you probabley have rock a few inches down, so even if you could get a ground rod in a few feet, the ground would be mostly ineffective (rock is very poor conductor).

So, with the ground "field" of wire mesh, you are creating an artifical ground, which will enhance the radiation pattern of the antennas.

First of all, get a copy of the ARRL Antenna Handbook.

Second, if you are going to run 100' of coax for 2/6 and 440 you will have about 20% of the signal/power into the antenna. The loss of the coax will all but kill your power to the antenna. Look in the Antenna Handbook for cable loss/foot/frequency before you do this.

Third, At the frequencies you are talking about, having the cables next to each
other is no an issue at all. A good trick of grounding is to get some fencing, say
10' x 10' and bury it about a foot or so under ground and then soak the area with
water and then hook like two or more ground rods to it. Tie all of this together and
that will be a good ground for you.

Good luck,

John w1hzh

Hello, I read the original post on the rec.radio.shortwave group. I am new to the hobby of SWL and one of the first things I tried to listen for was radio amateurs. Needless to say, I only understood about half of the conversations, due to my own technical naivete. I have always been interested in amateur radio, but the cost and technical rquirements were always daunting to me. I had a taste of things back in the 70's-early 80's when I was quite the CB afficinado- Browning Golden Eagle, Moonraker 4, D104, and an illegal 300 watt linear amp- the whole shebang. It was an exciting hobby for a teenager, and the best times I had with it were the times when propagation was good and I had the fun of working stations in the Carribean, and other distant places.

CB has always been amateur radio's black-sheep stepchild, but the technical things I did learn from it were very rewarding to me. One observation that I might make regarding amateur radio: The tech-types always seemed in the majority, and that's Ok, but many that I came in contact with seemed a bit irritated when it came to sharing their knowlege. There seemed to be an exclusivity about the hobby that made it hard to break into.

Many of the observations that I have seen on this thread have been well thought out and honest, and frankly others have had the tinge of the "old boy" club about them that I have found difficult in the past. I am hardly an expert, but here is my suggestion for what it's worth: Promote the hobby. Make it accesible, and be kind to those of us who know very little about technical matters. We all had to start somewhere. We are willing to learn. Accesibility, in my opinion, probably has far less to do with code requirements and bandwidth allotments than it does with those who are into the hobby making it easy for others to join the club.

For radio amateurs who care- be an evangelist! Get others excited, and be willing to answer questions. Help those who are interested to feel the same excitement that made amateur radio a rewarding part of your life in the first place, and the future will take care of itself. Thanks for hearing me out.

Kind Regards,

Larry Pritchard

OF course it can be said that wild panicky banging is just as effective as SOS when they are on one side of the hull and a would be rescuer is on the other. Just a thought, and a touch of sadness for those souls that no doubt died or are dying very slowly, and pitifully.

e on the side of a
>mountain so the ground is extremely hard. You could only dig down 6
>inches with a shovel before you needed a

I know what you mean about digging-- I live down in Tucson.

This is how we did an 8 foot hole for grounding rod.

Buy or scrounge a 6 foot piece of steel water pipe. Buy an adapter to thread on one end that will fasten to your water hose.

Use the pipe as a water drill. As soon as you get to the depth you want, pull pipe out and insert grounding rod, pound down to almost ground level.

You can build a fancier one by threading a Tee, some nipples and caps with a shut off valve right on the pipe, but for a one time operation my method works just fine.

Hi there,

Most of your questions have already been answered by other folks, except
for these two:

>Also, where do I attach the ground wire to on the antenna? Do I attach
>it to the tripods they are mounted on, to the mast next to the antenna,
>or somewhere on the antenna itself, or all three?

I'd attach ground wires to the ground points on the antennas (someplace
electrically connected to the coax shield, often the mounting hardware
used to secure the antennas to the masts).

>Another question I have is where do I place the lightning arrestor in
>the coax line? Is it placed as close to the antenna as possible, or
>inside the house close to the transceiver? I have one last question.

ALWAYS locate lightning arrestors OUTSIDE THE HOUSE, as close to your
ground system as possible. If you have to "loop" the coax cables a bit
to accomplish this, so be it. NEVER invite lightning inside the shack!
Always encourage it to remain OUTSIDE the house!

: a building and cannot hear or hit the repeater. So - to me cross band
: repeat is a major factor in deciding which radio to buy.

Will the cross-band repeat operate a split repeater frequency? I can see
how you can set it up so you can hear the repeater on your HT and then
use the 8100 to amplify your HT transmission. I have an
8100 and was reading the manual the other day wondering just this. I did
not actually try it, but the manual does not indicate that the radio will
operate repeater splits on one channel and crossband to a simplex freq
for the HT auxilliary radio. Just wondering if someone has actually
tried this.

What kind of power supply was it?
Most supplies are fused or have shut down capalities if overloaded.
I know some older radios used diode protection in the radio so when the
radio
was connected in reverse polarity the diode forward biased and blew the fuse
on the radios lead in wire. From that point on everytime the radio would be
connected it would blow the fuse until the diode that was shorted was
replaced.
Fixed many a truckers CB radio that way and they always had a 20 AMP fuse or
aluminum foil around them.

If the case the improper fuse device was used the smoke would be trapped in
the radio
and it would have to be disassembled to release it. [: +)]

(Along with a diode and proper fuse replacement)
Good Luck, Eddie

Larry,
We always try to welcome new blood but some like the "OLD SCHOOL"

mentality which makes Amateur Radio seem like a closed group.

We try to welcome all but your comments still ring true, hope to work you sometime, listen around and feel free to ask questions when you encounter a ham.

I have one of these towers for which I need a rotor plate. I have
tried to get MFJ to provide me with drawings or detals to have
made locally, but nothing so far. Could any of you trace out the pattern
and send me the trace so I could get one fabracated locally?

Thanks

Mike, the basic reason that so many ham radio verticals perform so poorly is because so many hams insist on using them incorrectly, mostly without radials! You don't see AM broadcasters having that problem. With a vertical antenna the counterpoise system is half the antenna, and using only half an antenna doesn.t provide even half the performance that a proper whole antenna does, vertical or not. With a poor or absent ground plane system, ground losses are dissapated as heat, and lost. And with half an antenna,very much ground loss occur, among other serious negative effects.
Once I used, for severaal years, an old Mosely trap vertical mounted at the peak of the roof on my frame house, with four magnet wires 33 feet long in a lazy "X", running to the four corners of the roof, tucked underneath the roofing shingles often enough to keep it in place. It worked great, just as well as any other antenna I've used on 40.
If you ground mount a vertical and don't have enough room for 4 fulllength 1/4 wave radials, use more shorter ones, like 8 - 20 foot ones, or 20 that are 10 feet long, a galvanized "chicken" wire or hardware cloth screen, 10 x10 ft or so, or whatever else you can fit in space available. It will perform circles around a ground rod driven at the antenna base and used as the entire "ground" system, although I have seen a ground rod alone perform acceptably. Beware of vertical antennas which advertise "No radials needed" etc. They are largely trickery. You said nouy needed to use a vertical antenna. Use an ordinary vertical antenna intended to use radials, then use the best radial field you can arrange, modest tho it may be. It'll work. The better the radial field the better the result. Ask any broadcaster.

BTW you can find lots of good information on this subject in the rec.radio.amateur.antenna archives in Dejanews.

Please Help!

The plastic coupling shaft on the bandswitch cracked. I have been able to repair it but......The trick now is to re-align the transmit side of the switch with the receive side of the switch. Apparently there is nothing in the service manual on this repair. The only way to do it is to look at the setting inside another TS830S.

Are there any TS830S owners in the San Francisco bay area who would be willing to just take off the upper and lower covers of the radio for me to look in for 5 minutes? It just requires a quick retighting of an allen set screw.

Thanks,

Steve
WQ6L

I just got off the phone with the Kenwood service guys.

I didn't know what single newsgroup to post this on; please forgive the multiple groups.

Ever since I bought the car (a 1993 GMC pickup), there was a pulse-type digital noise audible on the AM receiver which raised the noise floor by 10-20 dB. Maybe more. AM DXing was out of the question, and even in-city listening was frequently not possible or at least annoying.

A few years ago, I tried removing the antenna to clean corrosion on the ground connection to the truck body. This seemed to me to help. I would guess that I may have lowered the offending noise by 2 or 3 dB.

More troubleshooting over the years led to the discovery that the coax from the whip to the RF deck (mounted low in the dash approximately mid-cab) passed right behind the behind-the-glovebox computer. I guessed that this was the pickup mechanism, so I put several of those split ferrite cores around all of the leads in and out of the shielded CPU box. But this didn't work at all.

I left it alone for a few years, and then last month something got into me to try one more time. I located the coax coming into the RF deck, and I took all of those split ferrite cores that were doing nothing and clamped them right over the coax cable where they entered the RF deck. I was able to fit four or five of them onto the antenna cable before my fingers just ran out of room trying to reach up into the dash. This worked so well that I took a long drive just to hear what the radio was doing! The receiver was so quiet it was astonishing. AM DX is now a definite possibility.

Many of you will recognize that essentially what I did by using the split ferrite RFI suppressors is construct a kind of a W2DU balun. I posted this in the hopes that some of you suffering RFI in the car will benefit from this. Good luck!

Hello all,

I have an Icom IC-706MKIIG 160m thru 70cm with the OPC-581 remote
mounting cable.
The radio is currently being used mobile. No marks or blemishes on the front
cover or display.
Radio is in very good condition with one, small scuff on the chassis.
I am looking for $900 OBO. I may even throw in the CT-17 CIV interface for
the $900.
Terms are prepayment by MO or Certified Check. I also accept PayPal.
If interested, please reply in email.

You and the other posters make valid points, both positive and negative. One good use for it that will never go away is Skywarn. "The Eyes and Ears of the National Weather Service" are still a vital part of protecting the public. Doppler Radar,Wind Profilers, and more new technology have not tamed Mother Nature and I believe she never will be. So, our volunteer job will be there from now on. This is only a small part of a many faceted hobby I have enjoyed since 1988. Michael C. McCarty, N8EYE.

5138. Re: ***HELP: Yaesu FT-8100R or FT-90R, which one?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-21 00:00:00 UTC
From: Zordan Mulchieste <fruchte@empint.net>
Message-ID: <bU5o5.569$xi.53254@news7.onvoy.net>
Source record: 73319

The technology of the 90 is 1980's at best, very primitive based on what is available. Slow scan rate compared to the 8100's 26 channels per sec. Only one band at a time and certainly no dual in band receive like the 8100 has. For me , this is essential in a dual bander. I don't know about its intermod protection but the 8100 is the only unit with it built into the IF stage. Others like the Kenwoods are nearly non existent or Icom's attenuation feature, which isn't too bad. Unless you need something very small to fit in a particular car, I wouldn't consider the 90 it lacks too much. Direct freq keying would be very nice to have in the 8100, they missed the boat here but all its other features make it worthwhile to me. tone scan is useful if you don't know a repeaters tone and if someone is on the repeater, it will scan and find it for you from the input signal of the person using the rptr. So if you want to know the tone of a rptr but no one is on it you either sit there and wait or you do like everyone else I know and simply run through all the tones till you hit the one that works, takes a couple of mins. Or you look it up in the repeater handbook.

Hi Sam,
There was an issue of QST back in
1970 that explained how to add 6m to
the sb200. It involved removing one
band of the normal sb200 bands to do
it.
I tried it and had little luck. I ended up
gutting the input and output circuits and
making it a 6m only amp. I get about
600w out with 40w in.
Your sb200 should work fine with the
920. Nothing peculiar there.
In case of power supplies, I am guessing
you mean the transformer. You might
be able to find one at Peter Dahl's
company website (forgot the site offhand,
but he advertises in QST). His reputation
can't be beat.
Good luck.

Just on this point... about a week ago we were being told that
the trapped sailors were banging out emergency calls for help
on the side of the hull, but what was not clear was whether
or not they were Morse SOS type, or just wild panicky bangings
hoping anyone would take notice??
Either way, it didnt make any difference, and its kind of sad
to have to say that this doesnt make a good example of the
usefulness of learning morse.

THe comment about Hams concetrating on the higher freqencies intrigued me. Now granted any given amateur might well be interested in any given piece of the EM spectrum, to see what he can accomplish with it. But for me personally, I thought the challenge was to cast your signal as far as your skills might allow, HF certainly is the part of the spectrum where that is easiest. When I investigated getting a Ham license, I read the mags, and even joined the ARRL for a year. Where I lost interest was on the concentration on VHF/UHF, and studying the license requiremetns found that that is the very place I would be stuck working, with the first few license levels. Admittedly learning morse at any speed, was not something I was willing to do; try though I did. That said I do think there should be some code requirement at some point I wodner if my lack of interest in VHF/UHF has to do with the fact that when I dialed up any of the pertinent freqs on my scanner, all I could hear was people I could talk to on the street! I live in a small town type areaa, and know lots of folks. SHould I do any Hamming I would like to speak to new people!

Somewhere between $2,500 and $2,800. Some places even higher than
that.
I would like to get an TS-870S and will entertain other offers.
I currently have an old TS-430s.
Thanks.

Hi there,

I'm not sure who you are, but I must have met you at one time or
another at a hamfest or something.

Yes, I am a "wheeler-dealer", and have been for over 20 years now.
The big difference is, I stand behind everything I sell. I never
lie about condition or options. That's no way to make friends in
the ham gear (or any other) business. In all the years that I've
been selling gear, I have ZERO unhappy buyers!!!!!

You're right about Scander's original post saying nothing about a
tone board. That's exactly why I emailed him and asked him about
it! I've posted his response elsewhere on this board, so go take
a look. Knowing that I need CTCSS to access our local repeaters,
I wouldn't have considered the rig if it didn't have tones!

Yes, I work for Raytheon, in the RF & Microwave group. I've worked
in the military test equipment business for over 20 years now. The
problem is that I don't have any test equipment of my own that's
capable of helping me work on the TM-2550A's receiver, and we're not
permitted to bring personal equipment into our secure, government
contractor installation to work on it, and we're not allowed to
borrow test equipment and take it home. Sure, I'm perfectly capable
of digging into the radio and repairing it. I just don't have the
capability to do so.

As for the tone board connector, it's hacked up badly, not just in
need of some flux remover. It will have to be replaced, which is a
major job requiring total disassembly of the radio and removal of
the main PWB (with a zillion wires to disconnect and reconnect!).

Caveat Emptor... yep, very true. I guess I'm ultimately at fault
for taking a fellow radio amateur at his word, right?

So... email me privately and tell me who you are! Do I know you?

This is my own one-owner/nonsmoker Alpha 87A, serial #91190053. It is in absolutely top-notch (9.5 out of 10) condition cosmetically and electronically. It comes with the original manual (clean; pages encased in plastic) and all schematics. It works perfectly (NEVER a problem of ANY KIND), delivers full output, and is ready to plug in and go with any transceiver. Selling because I have never used it very much, and have an Icom PW1 to use with my IC-775. You'll be getting a REALLY FINE amp. Price is $3,995 + shipping/insurance FIRM. See my ebay feedback (swanman3) if you have any doubts. Tks es 73!

HI,
I have a Yaesu VX5R for sale.
This radio is in very good condition and comes with the following:
Yaesu case CSC 72
AA battery pack
Yaesu Hand mic MH-34
small comet 2 1/2" ducky antenna (Plus the stock antenna)
Box
2 manuals
This radio has the mars/cap modification.

$260 plus shipping

Thanks

Gary

Hi Bob,

The receiver is not completely deaf, but virtually deaf. I did some comparisons against two other 2m rigs to be sure. My 1978 Heathkit HW-2036A on an indoor 1/4 wave ground plane was picking up a repeater 35 miles away at almost full scale. With the TM-2550A connected to my Ringo Ranger II at 32 feet, that same repeater barely broke the squelch. In the car, I compared the TM-2550A against my TM-261A, with the same results. Our local machine, six miles from the house, was about half scale on the '2550A with the Ringo Ranger II connected. On that repeater (the only local one that doesn't require CTCSS tone to access it), I did get good transmit reports. Another repeater some 50 miles away doesn't even break the squelch on the TM-2550A, and it does on the HW-2036A, even on the indoor antenna. I think that my conclusions about the state of the receiver are valid.

Message-ID: <i5bo5.44854$QD5.468318@news.corecomm.net>
Source record: 73335

The 8100R is a true dual band rig. You can listen to 2 meters and 440 at the same time. You can also set the rig up to listen to UU or VV. Works great when you want to listen to your favorite repeater and scan the public service band as well.

Personally, I use the cross band mode all the time (every day). You can usually hear the 2 meter repeater, but you can't hit it with an HT. Set up on 1 way crossband. On some occasions I use full crossband when I'll be in a building and cannot hear or hit the repeater. So - to me cross band repeat is a major factor in deciding which radio to buy.

I don't think direct frequency entry or tone scan is a big deal unless you do a LOT of traveling. FIrst off, you won't be able to utilize the full potential of the radio while zipping down the highway at 55 MPH (or any other speed either). Secondly, you can find a repeaters tone squelch in a matter of minutes if you really want to. Besides, most of that information can be found in a repeater directory.

One important thing - get the programming software and cable. You can (re)program the radio in a couple of minutes. If you really want to get on a repeater that's not im memory you can always put it in the VFO, and it's not any trouble (unless you're zipping down the highway at 55 MPH). Besides, trying to program ANY radio while driving is not easy whether it's direct entry or not.

> new frontiers.....

The important thing is to find/recognize these new frontiers.

It used to be a major treat to hear a signal from another continent, or even across town, but not to kids brought up on internet chat groups and cell phones. We need to ask ourselves what incentives the hobby offers, or could offer, to justify it's exclusive use of valuable spectrum 'cuz if we don't have an answer, it'll go away.

One example, there's a bunch of Hams and potential Hams over on rec.outdoors.rv-travel who are retired and live out of motor homes and use email to keep in touch with kin. A major problem is finding phones to plug into on the road. Some Hams are already providing packet/internet gateways. If there were more, maybe we could bring a crop of these folks into the hobby, then intorduce them to other aspects they'd find useful and fun.

Again, I'm offering an example, not a solution. Let's do some brainstorming and come up with a plethora of others - better ones - instead of sniveling about fate.

Your information is correct about vertical antennas. It is very rare that a strong signal comes from such an antenna. So if you go for one, be prepared for a lot of frustration.

Further, the commercial vertical antennas are overpriced and inefficient. Without radials you are not going to do well at all. One exception to this would be a vertical dipole, but that will be large and needs to be quite high to get the high voltage lower end well off the ground. And with radials, you will still take a back seat to the signals with dipoles and yagis and quads.

I strongly recommend that you find a way to string up a dipole or two. You can put up an inverted vee with a single support, and let the ends droop to any convenient tie point. Not the best antenna, but superior to a vertical antenna.

In addition, it seems that vertical polarization doesn't do as well as horizontal polarization. I'm not strong on this point and will no doubt have people disagree with me. I do recall a very big signal from a guy who used two three element yagis vertically polarized, but let's face it, that setup had serious gain.

So if you get my drift, find another way, don't mess with a vertical antenna.

I have worked hundreds of countries with my yagi. I break pileups. I get S9 reports without using my amplifier. When I installed and used a vertical (it was a Butternut) I got terrible reports. On 40 meters I was 20 dB weaker on the vertical than on my wire dipole. I had lots of trouble even getting a QSO on other bands. So I sold the antenna, and won't ever go that route again.

Many hams make the mistake of moving to a QTH where there are antenna restrictions. This is a BIG mistake! It's silly to compromise your hobby by paying money to a homeowners association that tells you how to live.

There is a series of articles running in World Radio magazine about what to do if you are in such a situation. I suggest you read them.

Good luck and 73, Bob K6DDX (51 years in ham radio and getting better every year)

Hi, I have a question about antennas. I have an ICOM IC-746 transceiver and I will be getting a combination 2/6/70cm antenna made by diamond antenna, and also the TITAN DX from GAP antenna. My question is about grounding them. I live in Las Vegas, Nevada and live on the side of a mountain so the ground is extremely hard. You could only dig down 6 inches with a shovel before you needed a pick. I have been told that I need to drive an 8 foot ground rod into the ground. Since going down that deep is practically impossible, I was wondering if 4 feet would be sufficient? Also, where do I attach the ground wire to on the antenna? Do I attach it to the tripods they are mounted on, to the mast next to the antenna, or somewhere on the antenna itself, or all three? Another question I have is where do I place the lightning arrestor in the coax line? Is it placed as close to the antenna as possible, or inside the house close to the transceiver? I have one last question. Since I will be using TWO antennas, I will be using two coax lines for both of the antennas. Both of the coax lines will be 100 feet long, BUT is it ok to have the coax lines right next to each other or does there need to be some seperation between the coax lines as I mount them along side the house? I will only be using one antenna to trasmit at a time, so I was thinking I could keep them next to each other, but if you don't think I should, please tell me. Thanks so much for taking the time to read this and answer my questions,

-Pete

Butternut HF-6V. I've used mine for over 15 years and love it!
Great antenna on 20m and 40m.

Well, there's no doubt that Ham radio is in decline.
Despite the bells and whistles that manufactures add on to
new units, most technology, principles and practice are 30
yrs. old at least. Furthermore, unless you can afford 1000's
for plug 'n play units, the learning curve is steep and the
whole hobby is not really newbie-friendly.

If you gathered a group of young people together
and asked them about it I think their most cogent criticism
would be:

" Why should we go through the bother of testing
and licensure and the expense of (say) HT's ? There's no
one there we know to talk to. And besides, I can already
talk to all my friends with a cell phone and they're sort of
the same thing. I even get a 'free' pager with it. Who needs
Ham radio ? "

I think that hits the nail on the head. Sure, a Ham can
answer all these remarks, but not in any way that's going to get
young people running out to take their Element 2 exams. Why
bother?

I can certainly see the loss of UHF/VHF bands in the
future due to diminishing users and increasing commercial
pressure for bandwidth. I don't see the same thing happening
to HF and so those bands will remain part of Ham radio and
Ham radio will become more and more a "niche hobby." That's
not necessarily a bad thing. There are plenty of these from camping
to bungee-jumping to various hand crafts. They have their
devotees and will continue to do so.

In fact, I partially blame modern Hams fascination with
FM, HT's and UHF/VHF in general for contributing to loss of
interest by young people in amateur radio as these things can't
really "compete" with TV, Cable or cell phones for entertainment,
accessibilty or cost.

So what do I think would attract more young Hams ?
A return to Ham's roots. That means homebrewing HF capable
gear. It's wrong to see all young people as thrill-seeking consumers.
Teens don't learn PERL because they want to be over-worked
dweebs with no life. Sure, they want income. But also, they are
immersed in a technological society and naturally turn to that

technology to express their creativity. Believe it or not, homebrewing really is concerned with smart consumerism, recyling and personal independence and creativity.

Will young people buy that? Ultimately that will be their decision and their responsibility. Young people are perhaps most influenced by mentoring and societal trends. Certainly those societal trends don't appear to bode well for Ham radio: disposable tech., defining citizenship as priviledges recieved rather than as duties owed, credit enslavement rather than financial security. It's not a pretty picture. As to mentoring, that is your decision and your responsibility. You snooze, you lose.

73

Andrew
KG4JBM

P.S. Morse Code. I'm learning it and enjoying it. Still, I think it is not relevant to being a Ham unless that's your thing. But, trapped Russian submariners prove its continuing potential value in emergency communications. Morse can be sent by visual means as well as audio and so has a real place in emergency communications. It's just too easy for standard systems to fail. I think it was a real mistake by the Maritime industry and some Navies to abandon it as a requirement.

Porkeyus,

First, since you don't sign your real name, I wonder about the credibility of anything
you might say, but I'm in a good mood today so I'll respond with my $.02 anyhow.

I don't think its dying, it's definately going to go through a decline as the baby boomers fade
off the scene, but I wouldn't write it off for the next century. Lots of new frontiers
where there are no wires laid. Things run in cycles, the Internet is the "big deal" for now,
but who can say it is the panacea either?

When the bands were reapportioned in the 60's, one of the groans that was heard
was that ham radio was dying and that the 'old farts' from the spark days were all that
there was to talk to, nevertheless the hobby has survived til now.

Besides, I don't think ham radio was ever intended to reflect a broad subset of the population. CB
in fact was what brought it into the millions attention, and since then a vocal minority (from there?)
has continued to bash the hobby about testing, restrictions and everything else under the sun. Right
now there are no tests, unlimited power, and no obscenity restrictions on CB, but their
numbers aren't growing exponentially either, so some of your arguments don't wash here.

If you think its dead, then move on! Those of us who remain will continue to enjoy the
hobby.

Rich WA9HHB

There is absolutely ZERO evidence that Morse Code was ever used by
anyone on that sub. It is an urban legend.

> Morse can be sent by
> visual means as well as audio and so has a real place in

Please come up with SOME kind of example that backs up this claim. The
Navy has PLENTY of back up systems. They don't need to be wasting time
or money training sailors to use an archaic mode of communications.

> I think it was a real mistake by the Maritime
> industry and some Navies to abandon it as a requirement.

Not at all. Made damn good sense.

STANDARD DISCLAIMER: I like Morse Code, and I am concerned about the
loss of life on the Kursk.

I have an Astron 35M power supply that went bad on me, started out blowing fuses. I replaced the pass-transistors on the back of the heat sink and it no longer blows fuses. The problem now is 2 fold: 1. only getting about 1.2 volts out!!!! but I have full 22 volts off transformer/diodes. 2. all of the pass transistors are new but when I put them all in, the meter in the AMP current position PEGS full scale - but no fuses blow. When I take one of the pass transistors out, the meter doesnt peg full scale any longer. The problem started when I had a nearby lightening strike during a storm recently. Wondering if anyone has had similiar problem and what part could be defective??? Also, I have tried new LM233 and replaced the darlington TIP 120 but made no difference. The pass transistors are 2N3771's x 4. Help is needed! Thanks

Hey, a young fella that has a head on his shoulders! Whatta refreshing
post, 'Drew!
I've said all along that the emergency communications potential of Morse code
is the ONLY real justification for requiring hams to know it - at whatever
speed.
Congrats and welcome to ham radio, a hobby that's actually doing fairly well
for one that's dying out... The peceived decline is only partial, some
aspects of it are as alive and vibrant as ever. Homebrewing and kit-built
gear is one of the most lively areas.

It constantly amazes me how so many businesses claim to be located in Houston, yet are not. This is especially apparent in the ham community. For instance, this is in reality the CLARC Swapfest, which is located in Webster. Yet it is advertised as a "Houston HamFest." If it's a Houston HamFest, wouldn't it be located in Houston?

The same holds true for Houston Amateur Radio Supply, which is reality is located in Spring.

Hi everyone,

I'm upgrading to CEPT class 1 at the moment.
Because of very few possible antennas at my current location, I think
the best way of getting QRV in HF is a wire-antenna or a tuned wire.

My rig is a kenwood ts-680s.

My question:
Has anyone experiences with the FC-1000 by Yaesu ?
Is it possible to make the two components work together (in a good way
?)?

Many thanks in advance,

Peter

Here are a couple to try. Lots of info on them. I have used the NHRC-3,
as well as the RC-100 from Micro Computer Concepts. Depends on just what
accessories you are looking for. Very easy to build a repeater with these
controllers. I have built 2, and working now on number 3, 4 and 5.
All of mine use the GE Master Exec II radio. Sure is easier than the
one I built away back in the early 1970's.

5196. IP Over packet radio : Help

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-22 00:00:00 UTC
From: whrudey@mdsi.bc.ca
Message-ID: <8nuev0vmo1@nnrp1.deja.com>
Source record: 73221

Hi,

I am exploring the application of a point to point radio link between two host computers for an academic project. Ultimately, I would like to write a Window NDIS driver to interface to a an RF modem via a RS-232C connection to run IP over this link.

Does anyone have any experience in this area? Any suggestions as to whether its technically feasbile or not? Ultimately, for this acedemic project, I would like to take an existing UDP/IP application an run it over this radio link.

Any advice would be greatly helpful. I have looked at a pair of RF modules by a Abacom and it seems to be feasible.

How about Amateur packet radio? From what I have read, it looks like with packet radio, you use a TNC to bridge the host computer and the radio. Is it possible to interface a VHF/UHF transceiver to a standard modem and write the NDIS driver on top of that? My understanding is that the standard analog modem would handle the digital RS232 interface and accompanying digital serial data and modulate it onto a typical carrier signal for transmission over POTS. Could you take that signal and route it to a VHF/UHF transceiver for transmission? Is that even possible or is that just plain crazy?

Are there any other valid, feasible solutions? The ultimate goal of the project is to write the driver and hence the data link layer (handling all the error detection, flow control, etc) and ultimate provide solution to run this particular UDP/IP application over top of it.

As for data rates, I have read about numerous RF modems that claim they can achieve over the data rates of 38.4Kbps (in theory anyway) using GMSK and DFM. Any recommendations on hardware?

Do I still TNC if I am writing the NDIS driver?

Thanks in advance!!

Source record: 73236

Sounds interesting. You might be reinvinting the wheel, though. About 10 years ago, I was big into IP over packet radio.

There is a Class A address for amateur radio stations. I forget who the IP address coordinator is -- scheme was in place to subnet out by continent, country, state, etc.. But, with using a TNC in 'raw' mode, there are complete tcp/ip stacks that will run just fine.

Not hard to figure, running tcp/ip over a slip X.25 works, running tcp/ip over a slip AX.25 link isn't too different.

been too long since I played with it, but there were gateways around the world to the wired net, e-mail forwarding, etc., etc., so a throrough search of the net should uncover all the work that has been done.

I was a node on the net with 1200 bps but many were running 9600. Not exciting for web browsing, but worked fine with e-mail, etc.

The RF data rate isn't really a factor -- once a protocol is used, it is a bandwidth/power problem for datarate.

cheers

If you have a radio that has gone up in smoke or you think is going to have a bigger
repair bill than the radio is worth, I would be interested in buying your rig.
Let me know what you have and what condition it is in.
Thanks and 73

5213. Help: Yaesu Ft-1500M Users-->Funny Audio??

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-22 00:00:00 UTC
From: Dave Daly <dalyd@erols.com>
Message-ID: <8nvait$65e$1@bob.news.rcn.net>
Source record: 73238

Greetings,
Trying to determine if my radio is acting up or is the way it is.

I've been using a new Yaesu FT-1500M in my pickup for a few weeks now.

I've only received three reports that have me concerned...all other reports
were 5X5.

Some comments re: my TX:
"fuzzy"
"off freq a little bit"
"nasaly"
"compressed"
"just missing a little something"

Has anyone else experienced these? These reports were thru a repeater.
I had a friend tune in on my uplink w/ a HT and he said sounded fine.

VSWR is <1.5
Thanks,
Dave sends

Well, I do appreciate the responses, Dan, Jason, and KB9TMP. I guess I'll have to check out Alinco and Radio Shack (that Icon is a little too much, Jason).

In case you're wondering, we're heading on an extended trip with two vehicles soon and I want to equip both of them with a mobile. Anyway, since equiping two vehicles with radios (antennas, coax, etc.) can be expensive, I wanted something real cheap in an effort to keep costs down.

I was really hoping for something cheaper than what was suggested, but that is the price of ham radio equipment. I may just use the HTs instead (buying the car power adapters is certainly cheaper). I just hate dealing with all the wires in my hand with an HT (power, antenna, etc.).

Consider the Gap Challenger. It is resonant from 2 to 80 meters and requires 1 to 3 25-foot radials for 80 meters to work properly. All verticals are going to be noisey, and the low band on most multiband verticals is not going to do as well as you would like, but so far I have 4 bands dxcc with 318 countries worked, so it is better than some guys might have you believe.

Look at the flats on the switch in the final unit. Align them so one is to the right side of the radio and the other is down. Put the bandswitch on 10 Mhz and the flats should be vertical. If so tighten it down.

Source record: 73198

Depending on the Power Supply, it could
be easy or horrible if its a lab supply.

In "Most" cases, Astrons, and other similar
power supplies suffer Power transistor and
or Regualtor failures.

The Power transistors are located on a
fairly large heat sink, and the regulator
is located inside. That can be a Zener
Diode, or could be a IC or both.

Most manufactures of Power Supplies will
either supply a diagram, or will fix them for you if you should smoke them.

Power Supplies are tough to damage, but
can be distroyed if one uses a 20 Amp fuse
in place of a 2 amp fuse, or by-pass circuit
brakers...DO NOT DO this, as most hams
in your area or a suitable Two-Way tech
can easily fix a simple Power Supply
problem. they can't fix dumb XXXXXXX well
you know.

AFAIK, Galaxy did not supply cables, at least I had to build my own (in 1963). You will have to make sure the power supply connections match the transceiver connections, as the wire colors will be whatever the past owner decided to make them.

David,

The MKIIG has 70 cm hamband whereas the MKII does not. That's THE biggest
difference.
I just went to www.icomamerica.com and the 706 is right there in the
amateur/hf-shortwave section.

Incase you're interested, I have a 706MKIIG forsale. 6 mos. old.

5250. Lakeview "Plate Mount" for Ham Sticks, Comments?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-23 00:00:00 UTC
From: jhulet@aol.com
Message-ID: <20000823033816.19811.00000124@ng-cl1.aol.com>
Source record: 73155

Hello,

I came across an interesting mount for HF mobile whips... This is Lakeview's "Plate Mount" for mobile whips with a 3/8" X 24 thread. I have a Jeep Cherokee with a metal back hatch. I am wondering if the hatch itself will be enough of a ground for the whip antenna with this Lakeview Plate Mount attached with bolts to the metal of the rear hatch. This sounds like a "cleaner" setup the my current three magnet mag-mount that I am using now. But I am not willing to run grounding strap all over the back of the Jeep in the process. I get great performance with the mag-mount setup and I am pleased for the most part. The plate mount looks nice and would stop the scratching up of the roof ot he Cherokee and would keep the coax out of the rear passenger door...(not a good thing I know).

Anyone using this sort of mount? The plate on a Jeep Cherokee is in the rear hatch above the rear bumper.... Not sure what this location will do to the SWR?

Thanks for any comments...

I have for sale a Yaesu VX-5R.
Radio is about a year old and very good condition, no scratches ect. Serial # is the 8N version and have not had any problems with this radio. Radio has been modified for Mars/Cap.

Included is:
extra 2 1/2' rubber duck Antenna.(SMA)
AA battery pack
Soft case
Yaesu hand mic
Nice motorola belt clip
2 manuals
Box

I will take $240 plus shipping.
No trades please

I went to his site and read the info on it. It looks like the selling price in Japan is around $1038 USD at the exchange rate he mentioned! For a rig which is basically a FT-100 (as somebody else suggested) with out the big final PA's, it sure cost a bundle. The FT-100 is not much bigger in size, and at least you get more power out per dollar. If they expect to sell very many I hope the price is a lot cheaper when they introduce it in the US. I would not mind having one, but not for that price.

What would a "fair" price people would feel is right for a rig like this? I think over $1K is way to much.

5258. Re: IP Over packet radio : Help

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-23 00:00:00 UTC
From: whrudey@my-deja.com
Message-ID: <8o0r48$nf2$1@nnrp1.deja.com>
Source record: 73163

Thanks for your response,

Ultimately, I would like to just setup a two-node packet radio network for the purposes of this academic project. I believe I should be able to just setup these two nodes using some of the not routable IPs like 192.168.0.X (just like a private home Ethernet).

You mentioned the use of the TNC in raw mode. It sounds like I absolutely need the TNC between the PC host and the VHF/UHF transceiver. Someone had mentioned before, that they thought I may be able to use a normal analog modem (like a USR Sporster) to handle the signaling and let my NDIS packet driver do all the packet assembling/disassembling, error detection, sequencing, etc. Is that possible? Can the modem interface to the radio?

If not, what does the TNC do that the analog modem doesn't?

If I absolutely do need a TNC, are the interfaces from the TNC to the radio standard? Are most VHF/UHF transceivers able to interface to a TNC or am I limited to only new radios?

Can anyone recommend a particular brand of TNC and radio that they know does in fact work fine together.....preferrably a combination that is not too costly as I need to purchase two sets of them for this class.

Also, I am planning on writing my novice ham exam sometime soon. However, do I need to have my license to purchase this equipment (if purchased brand new....)?

Is it reasonable to think that I can find a set of compatible radios for the above that I can adjust the power output? I am thinking I would like to use just enough power to facilitate communication within 50feet or less so I don't disturb other HAM users.

Given the short range low power application, is it foolish to think I can do this BEFORE I write my ham exam? I am just finishing up my degree and am totally swamped.....so I have been delaying my ham exam til next summer.

Within the ham bands, are there designated frequencies to transmit packet data on? Are there any guidelines?

Thanks for your patience! ....i am still really new to the world of amateur radio...

As another mentioned, a small speaker mic solves the problem of handling the HT. However, another problem with an HT is trying to work with the small controls and tiny display while driving. Been there, done that.

A lot of questions!

I'll try to address some throughout the text
(Sorry to SHOUT, but I will use CAPS so you can distiguish the response)

<whrudey@my-deja.com> wrote in message news:8o0r48$nf2$1@nnrp1.deja.com...

> 192.168.0.X (just like a private home Ethernet).

THERE IS REALLY NO DIFFERENCE BETWEEN A NOT ROUTED AND ROUTED IP NETWORK.
Remember how IP works, it takes a destination IP address and atempts to
resolve it to a hardware address (via ARP), once it is resolved it is
transmitted. If the destination IP address is on a foreign address, it will
ARP for a router to give it to instead of the ultimate destination. So,
your software should work the same regardless if you route or not.

>
> You mentioned the use of the TNC in raw mode. It sounds like I
> absolutely need the TNC between the PC host and the VHF/UHF transceiver.
> Someone had mentioned before, that they thought I may be able to use a
> normal analog modem (like a USR Sporster) to handle the signaling and
> let my NDIS packet driver do all the packet assembling/disassembling,
> error detection, sequencing, etc. Is that possible? Can the modem
> interface to the radio?

YES, IT IS POSSIBLE -- of course, just about anything is. Since you are
trying to study/learn about networking, always pay close attention to the
OSI/ISO reference stack. Don't make layer 2 software do layer 3 duties
(sequencing and stuff). Packet assembley / disassembly is done at layers 3
and 2 but with different intentions.

Also, when paying attention to the reference stack, consider standards.
What the TNC does, is implement AX.25 (amateur X.25 packet switched
protocol -- a world wide standard). It will do RF Frameing, handle
destination/source addressing (ham call signs) and routing information.
When using a raw modem, you will, as you say, have to do all that in your
software. Your choice, let the tnc handle it in a relatively standard
fashion, or roll your own.

>
> If not, what does the TNC do that the analog modem doesn't?
>

>

SEE ABOVE, it takes a serial stream of data in, frames it, addresses it, checksums it, and maintains handshake with the remote node (for retransmits, etc).

> If I absolutely do need a TNC, are the interfaces from the TNC to the
> radio standard? Are most VHF/UHF transceivers able to interface to a
> TNC or am I limited to only new radios?
>

YES they are quite standard, there are 2 types of interfaces, raw audio -- connect the tnc to the microphone and speaker interface, or an FSK keying line (connect the key line to the radio key line).

>
> Can anyone recommend a particular brand of TNC and radio that they know
> does in fact work fine together.....preferrably a combination that is
> not too costly as I need to purchase two sets of them for this class.
>

What radio you use will depend on the data rate you wish to transmit, but roughly speaking, any radio is capable of packet and all TNCs (because they adhere to a standard !!) will work.

> Also, I am planning on writing my novice ham exam sometime soon.
> However, do I need to have my license to purchase this equipment (if
> purchased brand new....)?
>

You don't need a license to buy equipment, but you will need one to use it.

> Is it reasonable to think that I can find a set of compatible radios for
> the above that I can adjust the power output? I am thinking I would
> like to use just enough power to facilitate communication within 50feet
> or less so I don't disturb other HAM users.
>
most vhf/uhf radios allow for a low power setting, with an internal adjustment to set the level of the low power setting. In addition, for a 50ft range, you would probably want to xmit very low power into a dummy load instead on an antenna and it will work fine.

>
> Given the short range low power application, is it foolish to think I
> can do this BEFORE I write my ham exam? I am just finishing up my
> degree and am totally swamped.....so I have been delaying my ham exam
> til next summer.
>

Yes, but only if you do this on amateur frequencies. There are several public service bands (2.4GHz, 900MHz, etc, that allow low power, unlicensed service.

>
> Within the ham bands, are there designated frequencies to transmit
> packet data on? Are there any guidelines?
>

YES, look at the ARRL www.arrl.org site for frequency band plans. Looke
a the TAPR site (early adopter and definer of packet radio standards for
amateur radio)

Thank you once again!

I really appreciate your input. It is extremely valuable. Once, I get
a firm grip on this technology, I will be sure to put back into this
newsgroup, everything I got out of it.

One final question:

With regards to your input on whether I can eliminate the TNC altogether
and use a normal analog modem (assuming my NDIS driver on the host
takes care of all the work that the TNC would do), what is the interface
between an external analog modem and the radio?

Typically that would be a standard two wire line cord fed into the local
telco's RJ11 modular jack. Given that, what type of connector should I
expect to interface the analog modem to the radio with? Is the two wire
circuit sufficent for the interface? Can you buy a standard adaptor
plug to interface the line cord to the radio from the analog modem?

Once again, thanks for your time and patience, it is much appreciated!

Hi!

I have the following vintage Ham gear manuals and catalogs on up on Ebay.

1946 Collins 75A Receiver sales brochure
1946 Collins 30K Transmitter sales brochure
1939 Hammarlund Series 200 Super Pro manual
Vintage 1942 National 1-10 Receiver Manual
1976 Yeasu Catalog & price list
Vintage National Station Log Book - Unused!
Vintage Harvey Transmitters Catalog 1939
Hallicrafters Super Defiant SX25 Manual
Vintage Elmac PMR 6A Amateur Receiver Manual
1940's Premax Antenna Catalog No. R-42
Harvey-Wells T-90 Bandmaster X-mitter manual
Manual T-368/URT Transmitter & BC-939-B Ant.
Manual AN/ARW-2, 2X Receivers & ARW-3 Trans
Hammarlund BC-779-b, 794-B & 1004-C Manual

See them here:
http://cgi6.ebay.com/aw-cgi/eBayISAPI.dll?ViewListedItems&userid=sciquest

All auctions end 8/24 after 16:00 PDT.

Thanks for looking!

I'm a proud owner of a TH-D7 rtx...
my little problem is the...connection beteen the rtx and the gps or pc com. I can only do it with the original cable, included in the original box, but...ahi ahi, i bought this "total weapon" as second hand, so...i can only connect it with a "rented" cable kindly proviede by a friend. The cable i managed to build seems to be not the right one, but, belive me, after several test i decided to ask if someone has the same problem,

as the links are made following the rtx manual and the soldering have been made and remade being sure that the soldering mateiral was ok...I cannot explain why with the original cable (headed with a 90ï¿½ broken 2.5

mm jack) it can be connected even with the expresso machine, and WHY (???) i can 't do the same with my home made cable (maintaning same wiring order, perfectly working 2.5 linear jack, checked and tested with

a tester for the wiring order)...WHAT DOES THE ORIGINAL ONE HAS DIFFERENT FROM MINE?

I will appreciate very much any suggestion from every person who has

had the same problem, and i hope everybody will forgive my poor vocabulary and wrog grammar...
Wishing all the best, from IK5ZVE, Denis

Due to the recent purchase of an ICOM 706 MKIIG, I have a Radio Shack HTX-404 ht for sale. THis is a very nice rugge radio, that is in excellent++ condition! Included is the following: Radio, AA Battery Pack, 2-Ni-Cad Packs, AC Adapter, flex antenna, instructions. This radio has all the bells and whistles (DTMF, Tone Squelch, memories, scan, vfo, etc). THis radio has seen very little use. I really don't want to sell it, but I don't have the need for it now. I am asking $160 including Priority Insured shipping. I accept Paypal also. Thank you much for your consideration!

LARRY :-)

Many of the dual banders are a royal pain in the butt to operate unless you have good eyes and a steady hand.

Once you learn them they can darn near, but not quite, make breakfast too. Try to find one without a lot of whistles and bells.

5300. IC-290H PA problem

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-23 05:45:45 UTC
From: John Kent <dilbert@hotkey.net.au>
Message-ID: <39A36507.17100699@hotkey.net.au>
Source record: 73154

Hi Folks,

My old IC-290H 2meter multimode tranceiver does not transmit properly any more.
I can be heard locally, probably due to drive leakage from the PA to the antenna,
and the receiver works which implies the synthesiser and mixers seems to be working OK.
The PA does not draw any current and the RF output indicator does not indicate any
TX power output.

There is a dual power control / ALC control on the IF drive to the final TX mixer which
monitors the current in the PA and regulates the RF drive to the PA. The power control
is enabling full drive to the PA because the PA is not drawing any current. It is the same,
regardless of wether the switch is in the Hi power or the Low pwer setting.

The problem seems to be thermally related as the set would come good for a while when
powered up after being left cold for some time. Now it seems to be a perminant fault.

Are there any known faults with the IC-290H PA or PIN diode antenna switch ?

Many Thanks to anyone who can help me ....

John - VK3BIZ

Oh, I agree with both you and Matt Lawrence that I could use a speaker/microphone, but I simply cannot stand the sound quality of the ones I've tried. The small speaker in the handheld is bad enough, but the sound quality of those little speaker mics is enough to drive a person crazy if listened to it all day. I wish I could figure out a way to have an external microphone without a speaker in the microphone.

The small controls are not much of a problem for the trip. We'll probably park the radios on the 2m simplex calling frequency (146.520) and leave them there through the entire trip.

I purchased the separate Heil elements, built them into my old D-104 case with mercury switched. I did not want to drill into the mike so when I turn the mike upside down, the DX element is in the circuit, in the normal mode the other one is in. I also have the TS-850

I don't know about the speaker mikes available to you, but on my 202 I have one of the common RS speaker mikes and it has a speaker jack built in right next to the wires to to the mic. For a real rats nest, you could plug in a speaker as well, though after you add a mike, speaker, 259 to bnc adapter, etc, you are building a low power mobile out of that ht.

That having been said, I'll admit that my mobile is a 202 with all that as well as a 30 watt amp. I didn't put in a mobile because I might need to be portable with the radio and wanted the flexability of being able to disconnect and take the radio on foot with me. My mobile radio is at home hooked to a discone, for working from the house.
thanks, John.

I have a Kenwood TH-G71A. The audio is loud and very clear when in FM mode. However, I sometime listen to AM aircraft on 118-136 MHZ. In this mode (AM) I find I must set the volume control way up (almost to max) and even then it is not even close to the level I get from FM. In addition I find the audio "muffled" and not very clear. Can someone please tell me if their TH-G71A acts this way also? Or is there a problem with my radio?

BTW, how far apart do you expect the cars to get? If not by much (1/2 mile or so) a pair of cheap Alinco DJ-S41 70cm HT's will do the trick too. I think they cost about $80 a piece now. They work really nice for car-to-car and will be infintely handy after the ride.

5311. WANTED: 1960s Raytheon CB radios and documentation

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-24 00:00:00 UTC
From: k5dh@raytheon.com
Message-ID: <Cgdp5.2$jJ5.1150@bos-service2.ext.raytheon.com>
Source record: 73121
Cross-posted to: rec.radio.swap,rec.radio.amateur.boatanchors,rec.radio.amateur.equipment,rec.radio.cb

Greetings from Texas!

I am looking for 1960s Raytheon CB radios and handhelds for my personal collection. I'm interested mainly in complete sets that are in good condition and electrically restorable, but I will consider "beaters", "fixer-uppers" and "parts rigs" also. I already own examples of the TWR-1, TWR-2, TWR-4, TWR-5, and TWR-7, so I'm not really looking for any more of those models (unless I get 'em really cheap, in outstanding shape, or both).

Tube-type Raytheon sets were made by the company's Apelco division in S. San Francisco, CA. I may be interested in some of the similar looking and electrically identical Apelco CB models. Certain Sears (Allstate) and Webster CB radios were made by Apelco, and they would be good parts sources for my Raytheon restorations. For several years, Raytheon also owned SBE, and at least two of the later Raytheon CB models were made by the SBE division.

I am also looking for any kind of written documentation that pertains to Raytheon CB equipment, including owner and service manuals, advertising, spec sheets, dealer catalogs, copies of ads and articles from magazines, and so forth. In addition, I'd LOVE to hear from anyone who worked for Raytheon, Apelco, or dealers who sold or serviced Raytheon and Apelco CB radios. I've already been contacted by a number of folks who've given me bits and pieces of information, and I really appreciate it!

Visit my Raytheon CB radio web site at this URL:

http://www.qsl.net/k5dh/raytheon.html

I have some interesting historical tidbits posted, along with pictures, advertising, and so on.

In addition to running my own Raytheon CB web site, I have been working with volunteers at the Raytheon company archives up in Massachusetts, helping them document the product line (which did not previously exist in the archives in any way!).

Thanks and 73,
Dean, K5DH

No, you really can not practically use a telephone modem for a radio. The telephone circuit side of the average modem expects a telco interface of -48VDC. What you would need is a 'nailed up' line modem that does baseband signalling without need for telephone circuit current/voltages. Radios want baseband audio. Telephones want baseband audio but while pulling current on a -48v supply. they are not compatible.

but -- if you use a tnc (get an old tnc-2, must be a million around and cheap -- they are packet only, original TAPR TNCs) and run them in KISS mode -- then essentially it is a raw modem with a radio interface and all your packetizing must be done in your customized NDIS driver.

So, use a tnc as a modem and forget the 'dial up modems' for radio interface.

now -- just a point of view for you: the interface to the tnc is s-232 -- so look at the tcp/ip stack to be a SLIP connection and the rest is easy.

cheers

I have a mint Yaesu FT-50R Dual band handheld for sale. Unit comes with 6V battery, charger, antenna, strap, Voice recorder keypad and manual. I will sell for $200 plus shipping. Unit has been MARS/CAP (extended TX/RX) modded.

Photos below

Perfect. I think I got a good starting point. Thanks for all your
help.

Best Regards,

In article <MUgp5.2433$Y5.16751@typhoon.tampabay.rr.com>,

Message-ID: <61jp5.8823$aE5.338698@news-east.usenetserver.com>
Source record: 73129

Hi. Thanks for looking at this. I have a Kenwood TS440SAT. Yesterday, the display went blank save for the a row of decimal points along the bottom of the display. If I change frequencies, the display works for just a moment and then goes back showing the dots. Is this a symptom of the potting compound problem that the 440's are known for?

Thanks
John

Just passing through this thread but I am wonder why you just don't
purchase an additional mobile unit for your car and leave the original
mobile unit at your house as you are presently doing and then carry your
uncluttered HT as needed? Mobile units are relatively inexpensive..

As long as you don't need to run high power, a 3 watt supply will work
fine. I have an HTX242 and a rat shack 3 amp supply and have been using
this combo for quite some time. I only use high power if i'm mobile.

No.

> Whats the difference between the MK-II and the MK-IIG?

The MKII is discontinued now from what I hear. The MKII, I think, only did 20w on 2m, and required you to install the DSP unit, as a option, if you what it.

The MKIIG has more power on 2m (50w FM/PEP) all mode, has added the 70cm band (20w FM/PEP) all mode, now comes standard with DSP, and has sockets for two selectable filters (your choice of SSB and CW) too. These are the main changes.

I have the MKIIG with the optional high stability crystal unit (+/- 0.5 PPM) and the 1.8 KHz SSB filter installed. I paid the big money for the high stability crystal unit since the rig is used mobile, and thus exposed to temperature extremes. This makes operating SSB on V/UHF easy, with little or no frequency drift due to temperature changes. The frequency stability, v.s. temperature, of the stock crystal sucks at +/- 5 PPM. This translates into a 2.2 KHz drift on 440 MHz for example. The stock crystal should be OK if the rig is used in the shack, where the temperature is stable, if that is where you plan to use it.

FOR SALE : CWR-685E Telereader /w matching printer. + complete manuals
Copies and sends Morse, Baudot (various
baud rates), and Ascii. Has built in monitor, and outboard Keyboard.
Also comes with the matching printer Comax CM40PS
+ all cables and manuals. Works great !
All in MINT condition in the original box
Asking $200 including shipping.

Sent via Deja.com http://www.deja.com/
Before you buy.

5329. ft-920 vs ft-1000mp

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-24 22:47:29 UTC
From: bob mackie <mackie@snowy.net.au>
Message-ID: <39a5a5ca.0@snowy2.snowy.net.au>
Source record: 73134

I have the opportunity to purchase one or the other, I would appreciate comments on these rigs, I like the ft-1000mp but the ft-920 has the later technology. The addition of 6m in the 920 doesnt bother me as I own a seperate 6m rig.

thanks bob vk2qr.

> it. It can output as much as 20 watts or so.

That kit uses through-hole technology components, and I doubt will sell in the same volume as the FT-817, while the FT-817 will be manufactured in high volume using surface mount components. Surface mount components will typically cost about 20 to 30 percent less, in many cases, than the same component in through-hole technology. Given the above, and also with the elimination of the high power PA's, it should sell for significantly less than the current FT-100 (not the FT-100D model) I would hope.

There really is no new technology in the FT-817 that I have seen so far given what little information that has leaked out to the public. It looks like just a repackaged FT-100, without the big PA's, in a smaller box. Most of the circuit design engineering has already been done when the FT-100 was designed so there is little engineering cost to recover in the final price.

Message-ID: <20000825092554.05365.00000324@ng-fz1.aol.com>
Source record: 73049

Hello,
Does anyone know how to hookup or make the Tandy 300bd modem decode the wx data I hear on my 2meter frequency? I know TONS of people have done it and still do. What is required to make the modem decode the data? Can I run a basic terminal program like Telix or Telemate? Do I have to make a special cable for hooking it up?

Any help will be great!!

Thanks and hope to hear from someone soon....

Jeffrey - n9mxt1@aol.com

The owner of Vanguard Electronic Labs is retiring and is offering for sale the entire contents as one package. No sale of individual items at this time. Now is your chance to go into business for a small fraction of the cost normally expected. With the equipment you can manufacture almost anything and not depend on anyone except raw material suppliers like aluminum sheet and PCB laminates, Some of the products Vanguard has manufactured includes TV cameras, RF converters and preamps, frequency synthesizers and recently Weather Satellite Imaging equipment.
All equipment is sold as-is but can be seen operating. Don't delay as the equipment must be moved soon. Tell your friends about it if you don't want it. To make the deal attractive I'm letting you name your offering price. If I accept it you'll have to move the equipment within one month. If I don't receive any reasonable offers the package will be placed on E-Bay for auction to the highest bidder. Reply by e-mail and I'll tell you where you can inspect the equipment.

Here is the list of equipment and supplies to the best of my recollection:

5 ton punch press with adjustable dies. Configure them in any pattern. Requires 220 volts 3 phase. Rotary converter included for operating on 2 phase lines. Converter supplies the 3rd phase.
2 ton punch press with some dies and a serial number, numbering head.
2 HP air compressor. Up to 200 psi.
Di-acro notcher. Up to 4" notches.
Di-acro 18" wide bending brake with adjustable fingers.
Di-Acro 24" wide bending brake with adjustable fingers.
Di-Acro 12" sheet metal shear.
Di-Acro 2 ton punch press. Modified to use air cylinder. large assortment of punches and dies.
Wysong 36" sheet metal shear.
Enco milling machine with assorted tools.
Floor model drill press.
6" Craftsman lathe.
Craftsman band saw
Acrodrill model D-5250 circuit board duplicator with carbide drills.
HP Laserjet 4MV. 16 pages per minute.
Multigraph duplicator (photo offset). Up to 60 pages per minute.
Universal coil winder by Coil Winding Equipment.
Pick & place surface mount carousel with vacuum pick up.
Weller soldering irons.
Stimpson eyeletting machine.
S.S. White Air abrasive unit Model D.
6"x12" solder pot for solder dipping circuit boards.
Small solder pot for tinning wires.

Table top electric oven for drying circuit boards.
Large baking oven for baking painted objects.
Kepro copper plating tank with chemical, timer and controls.
Kepro lead plating tank with chemicals, timer and controls.
Kepro Ultra violet exposure frame.
Kepro photo resist developing tank with dual spray pumps.
Kepro circuit board etcher with dual spray pumps and chemicals.
Nu-Arc Carbon Arc with vacuum exposure frame.
Better Pak electric gummed tape machine model 5555. Push button operation.
Paymaster check writer.
Ventuna automatic 3-1/2" disk duplicator with hopper for 100 disks.

TEST EQUIPMENT

HP spectrum analyzer model 8551B with 851B display.
HP noise figure meter model 342A with 343A noise source.
HP millivoltmeter model 411A.
HP oscilloscope model 185B with 2 plug-in amplifiers.
HP standing wave indicator model 415B.
US Army Signal Corps IM 193/U coaxial slotted line.
US Army Signal Corps TS-330/TSM crystal impedance meter.
US Army Signal Corps TS-683A/TSM crystal impedance meter.
Wavetek function generator model 148A.
Wavetek signal generator model 3000.
Wavetek sweep generator model 1050A.
Vector voltmeter PRD model 2020. 1MHz-2400 MHz. 2 inputs.
Data Precision frequency counter model 5740.
Marconi Q meter with RF source.
Singer Panalyzor (spectrum analyzer) model SB-12bs,type 100.
Complete with power supply.

20 or more steel workbenches with overhead fluorescent figures.
10 or more steel shelving units.
3, 2 door metal cabinets.
40 Amp Variac, 0-140 volts.

Thousands of surface mount chip capacitors and resistors on reels.
Thousands of stainless steel screws and nuts of various sizes.
Hundreds of radio tubes.
Hundreds of transformers.
Hundreds of cut pieces of PVC pipe for antenna masts.
About 10 sheets of FR-4, 1 oz 2 sides 36"x48" printed circuit board material.
About 6 sheets of .050 aluminum.
Dozens of aluminum rods, tubing and shapes.
Pure gold wire for evaporating electrodes on crystals.
Gallons of chemicals for various processes.

Lots of other small useful stuff to numerous to list.

Regards,
Andre W2WHE

5336. Sangean 404 or 505?

Newsgroup: rec.radio.amateur.equipment

Hi, everybody! (Hi, Dr. Nick!)

I've been listening to shortwave on-and-off for about a year now, mostly on my Grandfather's analog, crap-brown Grundig-Majestic from about 1950. I'm going to boarding school (it's a long story) in Connecticut on September 7th and would like to buy a radio to take with me.
I've done some initial research via C. Crane, Radio Shack, and the Sangean and Grundig websites. At the moment, I'm leaning toward C. Crane's Sangean 404 package, with the booklet, antenna, and AC adapter. I also want The Worldwide Shortwave Listening Guide, $17.95, so the whole thing comes to $144.80, which is about as much as I'd like to spend for a radio with the Listening Guide, antenna, and AC adapter. On the other hand, there's a 505 in C. Crane's "orphans" section for $114.95, so I can probably get the whole package with the Listening Guide for $159.80.
My question is, what are the real differences between the 404 and the 505? I know there's single-sideband on the 505 and not on the 404, but how useful is SSB? In short, is it worth the extra $15 for the "orphaned" 505?

Thanks for your help,

Ethan Labowitz

Good question and I'll through a loop at you too. The 505 is a
foreshortened (less featured) ATS-909 in both concept and execution.
Internally they appear quite similar in layout and while I don't have a
schematic at this moment I believe the 505 is a near twin to the 909. The
pitch? Get the 505. Another bend is that the RS-DX-399 is on sale now at
$99US (regularly 149.00), it's a twin of the Sangean 606a and a very good
receiver indeed, see the Netherlands Radio tests of that one (606a) to
form your own opinion. As you see I'm steering you away from the 404. Not
that it's bad, it's NOT, it's just that these other two RX's have a
little more to offer. Take care, good DXing to you!

5343. HERCULES 444 KILOWATT LINEAR AMP FOR SALE

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-25 00:00:00 UTC
From: w6sfg@aol.com
Message-ID: <20000825162741.17522.00000956@ng-cj1.aol.com>
Source record: 73061

I'm listing this amp for the xyl of a silent key friend of mine.
This amp is a solid state full break-in HF KW Linear. No tuning,
broadbanded. 1.2 KW PEP input all bands, 725W output typical. Blackout
meter panel. Factory mod for 10 meters has been installed (I think).
Excellent
condition, styling to match the TenTec Omni C-D Series. Power supply and
interconnect cables included. The power supply is a separate chassis.
Original owners manual included. 220V or 115 AC. $500 plus shipping. (FIRM)
*ACCORDING TO TENTEC, THIS AMP IS NOT USABLE WITH THE NEW SOLID STATE RADIOS,
DUE TO A LEADING-EDGE SPIKE ON THE RF SIGNAL. THAT SPIKE WILL, ACCORDING TO TT,

CAN IMMEDIATELY BLOW THE FINAL TRANSISTORS IN THE AMP, RENDERING IT USELESS AND
VERY
EXPENSIVE TO REPAIR. HOWEVER THERE'S A WHOLE LIST OF OLDER SOLID STATE AND
TUBE RADIOS IT WILL
FUNCTION WITH PERFECTLY.
I'M NOT TRYING TO SCARE ANYONE OFF BUT I'M SIMPLY BEING FORTHRIGHT WITH ALL THE
DETAILS AS I UNDERSTAND THEM SO NOONE ENDS UP BLOWING THE AMP UP AND BLAMING IT
ON ME.
As far as I know the amp IS in good working order but if not your money would
be refunded
and I will pay for return shipping.

Hi Ethan,

Have you at all considered trying to locate a Radio Shack DX-375? The model has been discontinued but many Radio Shack stores are liquidating their supply
of the radios's at $40. Thats a great bargain and will leave you money to spend in other ways. In performance it is similiar to the Sangean's you mention. However, the DX-375 only tunes in 5 khz increments and cannot tune slightly off-frequency. It is AM only, no SSB. Shortwave coveraage is not continuous and there are only 30 memories, 10 each on medium-wave, FM, and shortwave. An AC power adapter and an antenna are extra. They would probably run you about $10 each at Radio Shack.

If you do want the Sangean 505, Radio Shack has a clone of it. I think its called the DX-402, not exactly sure. It currently sells for $149, but they will eventually put it on sale, probably for about $99.

Hi all,

I have reproduced the diode boards for the Classic Collins 30L-1. If you have a 30L-1 and it has the original 1N1492 top hat diodes in it, you probably need one of these boards. Out of the seven amps I checked out, five of them had at least two shorted diodes. These new boards are just like the original in that all components are placed just where they are on the original. This board is extremely high quality and will live up to the Collins standards. All components are either NOS or NEW. The 16 rectifier diodes have been upgraded to new 1N5408's (3 Amp, 1000 volt PIV) made either by Motorola (now ON Semiconductor), or by Vishay. The 16 ceramic capacitors are 1KV ceramic disks made in the USA by Sprague. The 1500 Ohm resistor is a genuine Carbon Composition 2W 5% Allen Bradley! The 4 Meg 2W, 1% metal film resistor is a genuine Dale, and the 1 Ohm 5W 1% is either a Dale or Pacific NOS mil spec resistor or when these run out, it will be a New Ohmite brand. All assembly is being done by a NASA certified solderer. I have used the best components I could buy and hired the best assembler I could find. I wanted this board to be truely Collins Quality. A photo (not a very good one however) can be seen at http://members.aol.com/dw130/diode1.jpg If you would like to place an order for one or more of these boards they are $79.00 each + $4.50 total shipping in US (no matter how many boards you order). If overseas, shipping will be actual cost. Please send to:

If you are willing to spend $110 or so, I would suggest you take a look at
a used Yacht Boy 400. Universal Radio has several for sale at that price
and Durham Radio in Canada sells reconditioned YB 400's for about $115 US.

THe Yacht Boy 400 is a value than either the Sangean 404 or 505.

5349. RS amplified speaker auto off

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-25 00:00:00 UTC
From: KC0HQW@ARRL.ORG
Message-ID: <39a713c1$1@news2.starnetinc.com>
Source record: 73067

I use one of Radio Shack's amplified communications speakers in my car with an HT. The speaker automatically de-energizes after a period of inactivity, and automatically energizes when audio is detected.

I find that I frequently miss the very beginning of things, like call sign prefixes, while this thing is powering itself back up.

It didn't come with a schematic. Has anyone ever modified one of these things so that the amplifier remains energized all the time?

I have 1 of the type M68729 class C (i.e. FM) 30 Watts out average, 40 Watts max. These will replace older M57774 modual just fine. The input drive is 300 mW for 30 watts out. I am asking $50.00 including shipping to conus for them. RF parts wants around $70.00 for the same.

These are brand new never been used and still have the one inch leads on them.

Thank You,

Bryan Fields, KB9MCI

All I have seen for the FT-50R are those little speaker/mics. This small Yaesu handheld has one of those microscopic-sized (3.5mm), four-conductor, microphone connectors (which disables the internal mic/speaker when something is plugged into it).

I suppose the tiny connector could be rewired, but that is something I'd rather not attempt. My soldering skills are not that good, and neither are my nerves.

Already have two handhelds, Rad. At first, I was looking at a mobile
to avoid all the mess of wires associated with using a handheld on an
extended trip (power cord, antenna coax, etc.). But now, after looking
at the price of a two new mobiles, the handhelds are looking a lot better.

So, at this point, we're discussing ways to avoid all the wires. The
options are a external speaker/mic (with its poor sound quality), or
using the handheld's built-in mic and dealing with the wires.

Hey, check this:

Just asked the guys at the local Rat Shack today - that good ol HTX-242, 45 watt, 40 memory, 2m mobile rig just went DOWN in price. Current Clearance is $129 and change.

Get 'em while you can - I've got 2 coming in for meself and a bud - only 6 left in this district. They're likely to go pretty durn fast at that price.

And that new one (HTX-252)?!?? Sheesh! 25 watts, 10 memories and $180 tag? Methinks HRO or AES will get the next call.

(And no, I don't work for or have any other interest in RS, other than using some of their stuff)

Source record: 73142

I was wondering if anyone in this newsgroup has seen such a thing as a quick release/connect mobile antenna for 2 m/70 cm?? I'll probably be using a glass mount or a wholeless trunk mount but unfortunately I live and work in a high-crime area and need a way to quickly put on and take off the antenna without much effort and without wearing out the threads on the antenna base. I recall seeing such an antenna for CB's about 20 years ago. Thank you in advance for any suggestions.

5359. FS: ATLAS 350XL transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-25 00:00:00 UTC
From: dslosty@pipeline.com
Message-ID: <39a61e63.6749260@news.pipeline.com>
Source record: 73143

Fore sale, an Atlas 350XL transceiver in very good to excellent
condition. Cosmetically it's around a 9 out of 10. The only
imperfections are some small scuff marks on the front panel trim ring.
Front panel is perfect and the case is almost perfect.
I've gone thru the rig and have done some minor repairs and
an alignment.

It has the digital readout, CW filter, full QSK, 350 watts PEP input
power with a maximum of 160 - 200 watts output. With the addition of
aux crystals, it will go on the WARC bands.

Requires a 35 amp 12 volts supply since maximum key down current is 32
amps. A supply is not included. It comes with a W7FG manual copy.
$300 plus shipping.

73,
Doug/WA1TUT

John, yes it is. If you are handy, you can get some dental
picks and carefully
pick out that goo, especially around the transistors
and get it working again. Sometimes that won't work. Most shops
the fix is to remove all the parts from the offending area,
(Vco 1, and Vco 5 I believe), and clean the board, install new
parts, reglue with hot glue, and retune.

I did say "optional" high-stability crystal unit, and filter, in my prior
post. And yes it does add about $200 USD to the cost of the rig.

I heard that the MK-II has been discontinued...at least many places that are selling them them as a "close-out" item. AES currently offers the MK-II for $799 and the MK-IIG for $999.99. I just ordered one this morning from them.

I don't believe the high-stability xtal or the 1.8 kHz filter are standard in the MK-IIG. I think you're confusing that with Yeasu's new FT-100 "D" version which added the TCXO, a CW filter and a larger speaker...plus about $200 to the pricetag.

Bob,

I am not trying to be nasty.

I own a 920 and have had it since they first came out.

I very much enjoy the rig. I have used an FT1000MP and
found it not to my liking.

The only thing I do not like is the fact that you need to buy
a narrow filter for cw.

The rig has ran just fine for me. I love the antenna tuner and
having 100 watts on six when I need it.

Buy the one that fits you and have fun!

How about this for a price comparison.

The QRP rage is the Elecraft K2 kit with SSB, NB, and 160m options runs about $700 US. The K2 does not have any vhf/uhf bands & you have to build it. It can output as much as 20 watts or so.

Hi Ethan: In my opinion, I would advise getting the 505. Overall,
it's a better radio, more sensitive on MW/SW than the 404. Audio
quality, which is very important in a radio, is also better. You may
not want to listen to SSB now, but if you ever decide to in the future,
you'll be able with the 505. In fact, that's really where most of the
action is on HF, as far as the percentages go. For the money, I think
the 505 is a much better buy, especially since it would cost you
precious little more. If you check out the reviews in Monitoring Times

or Radio Netherlands for example, they could give you more details on each radio. Better yet, if you possibly can, go to a store which sells them and check each out yourself. That way you'll have a "hands on" evaluation by which to make a better decision. In the end, you'll make the final decision that's best for you. All this forum can do is perhaps help towards that end. My best to you in your challenging days ahead, I Am, Red Pony

For Sale Gonset "Commander" transmitter. No power supply or manual. A 6-7
out of 10.
Complete including knobs and tubes. Front panel looks good 8 out of 10. Part
of the C in
Commander missing. Otherwise lettering looks good Some extra holes in
cabinet.
Chassis is bent by the power plug but could be straightened. Plug is ok.
jpg's on request. as is $65.00 plus shipping from 61559. Or will trade for
an
AC supply for a Gonset G76. Thanks Larry WA9VRH

5379. ForSale Johnson FM 540 HT's

For Sale 2 Johnson FM 540 handhelds. Book says 136-174 Mhz. I believe these are in the 160Mhz range currently. Comes with the following:

2 mobile mounting racks
2 external microphones
2 AC chargers
2 ear phones
2 carrying cases
2 rechargeable battery packs (with bad nicads)
2 battery backs that you put AA nicads in.
1 service manual
1 operating manual

All in good shape not beatup. Both units make noise and squelch works. Both transmit also. as-is $60.00 plus shipping to 61559
Thanks Larry WA9VRH

Hey, you can never have too many radios. :)

> So, at this point, we're discussing ways to avoid all the wires.
The
> options are a external speaker/mic (with its poor sound quality), or
> using the handheld's built-in mic and dealing with the wires.

And avoiding a lot of wires is one of the reasons I threw the idea of
Alinco DJ-S41's out there. These HT's run on 3 AA batteries for a LONG
time, so there isn't much need to a cig lighter cord. They can't take
an external antenna, but for short car-to-car this isn't that necessary
with the 70cm band and 340mW. The only cord you might want with this
radio is an earplug, but if your car is quiet enough that isn't even
necessary. This radio is only a little bigger than the mics on mobile
rigs, so a speaker mic really isn't necessary either.

Interestingly we are finding through hole components are actually easier and cheaper than surface mount at the moment.
Ironically all the activity in the cell phone and telecom areas has dried up supplies of many passive and active surface mount parts, leaving us in good shape for through hole parts.

And if you need to talk to non-hams...

Radio Shack now has a BASE station FRS, and a MOBILE FRS
radio.

They get around the rules about antennas on FRS by putting ENTIRE
FRS radio in the base of a mag mount antenna. The in car unit is
actually a small control head, mic, speaker combo, and there is a
cigarette lighter to plug in.

Full 500mw, with the ground plane outside on the roof of the car...

Should do pretty good for car to car!

Mike

Hello, Jason (and all)!

You'll find that the bolted mount will actually present a better ground than the mag mount. A major drawback of mag mounts is that they frequently end up grounding at the DC line of the rig, unless you run a separate ground to the mount!

As far as it being a better 'Ground Plane', no...the jeep (and road) will still form the counterpoise for the antenna!

73!

And; as my English teacher used to observe, "An inability to express themselves without descending into profanity!"

BTW next year, 2001, Radio Amateurs here (Newfoundland, Canada) and I guess also in the UK will be celebrating the 100th anniversary of Marconi receiving the first trans Atlantic wireless message from Poldhu, in Cornwall. I guess Marconi and those other early experimenters were some of the early radio amateur/experimenters!

More recently was it not a radio amateur who was the first to bounce radar signals off the moon shortly after World War II? Thus leading to space radio communication, satellite tracking and so on? Today we take radio communications out to Mars almost for granted; but someone had to be the experimenter.

Many years before that was it not radio amateurs who pioneered the way to using what in those days were considered to be the useless higher frequencies? Frequencies we use today for TV, cellular wireless phones etc. Some useless?

Anyway good luck to all radio amateurs, whatever their field of interest whether it be ragchewing or the latest in laser transmission!

Terry S.

5399. TS850s wideband TX problem.

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-26 00:00:00 UTC
From: Mike <Mike@g3uof.worldonline.co.uk>
Message-ID: <39a7830f@news.server.worldonline.co.uk>
Source record: 73094

Hi! Can you help? I have had my Kenwood TS850s since new and am very pleased with it, but have now had a couple of reports on a transmit problem. Both reports have been on my 14MHz cw transmissions being wideband - i.e. the main transmission is surrounded both sides with wideband noise (synthesiser problem?). There didn't seem to be a problem with the receive side until I switched to using the SSB filters (I normally use the 250/270Hz filters cascaded for cw reception) - I then noticed the very strong signals on 20 cw were almost auroral-sounding.
The problem seems to be restricted to 20m, but that might be due to signal strengths involved.
Any advice/info would be greatly appreciated.

73, Mike G3UOF

I am selling my excellent condition Yaesu FTV-901R Transverter...no reserve on Ebay, auction ends August 28! (Monday):

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=416427431

*144-148 accepts two other band modules
*20 watts input
*ALC
*RF bypass for HF operation
*drive requirements 3V RMS at 28 - 30 MHz (requires xverter output or attenuator)
*120VAC operation
*split for FM Repeater
*includes cables and instruction manual

Contact me at n1ar@yahoo.com with any questions. There are some nice pics of the transverter on ebay.

I was able to reset the CPU, but I have another problem. I can't receive but I can transmit. Here's the story. I am transmitting on 145.200 and the spectrum analyzer says my freq. is 145.200 and the radio display says 145.200. But when I inject a rf signal at 145.200, nothing happens, it doesn't open the squelch even I adjust the output signal level to -50dbm. Then I tried to sweep the rf signal gen. from 140.000, I was surprised to get a clear signal at 140.700 (radio display is on 145.200). What could be the problem? I don't have the schematic or service manual of this HT so if someone can tell me if there are any adjustments required to get the rx freq. straigthen out? I can see only few adjustable pots and adjustable coils inside. For what they are, I really don't know.

Please help......

TIA,

Max

It Works, Its Legal, Its Easy, Its Fun, so Why Not read this and play?!!!

Parents of 15-year-old find $71,000 cash hidden in his closet.

Does this headline look familiar? Of course it does.

You most likely have just seen this story recently featured on a major nightly news program (USA).

His mother was cleaning and putting laundry away when she came across a large brown paper bag that was suspiciously buried beneath some clothes and a skateboard in the back of her 15-year-old son's closet. Nothing could have prepared her for the shock she got when she opened the bag and found it was full of cash. Five dollar bills, twenties, fifties and hundreds - all neatly rubber-banded in labeled piles.

"My first thought was that he had robbed a bank", says the 41-year-old woman, "There was over $71,000 dollars in that bag - that's more than my husband earns in a year".

The woman immediately called her husband at the car-dealership where he worked to tell him what she'd discovered. He came home right away and they drove together to the boy's school and picked him up. Little did they suspect that where the money came from was more shocking than actually finding it in the closet.

As it turns out, the boy had been sending out via E-mail on the Internet a type of 'chain-letter' to E-mail addresses that he obtained off of the Internet. Everyday after school for the past 2 months, he had been doing this right on his computer in his bedroom.

"I just got the E-mail one day and I figured what the heck, I put my name on it like the instructions said and I started sending it out", says the clever 15-year-old.

The E-mail letter listed 3 addresses and contained instructions to send one $5 dollar bill to the person at the top of the list, then delete that address and move the other 2 addresses up, and finally to add your name to the bottom of the list. The letter goes on to state that you would receive several thousand dollars in five dollar bills within 2 weeks if you sent out the letter with your name at the bottom of the 3-address list "I get junk E-mail all the time, and I really didn't think it was gonna work", the boy continues.

Within the first few days of sending out the E-mail, the Post Office Box that his parents had gotten him for his video-game magazine subscriptions began to fill up with not magazines, but envelopes containing $5 dollar

bills.

"About a week later I rode [my bike] down to the post office and my box had 1 magazine and about 300 envelopes stuffed in it. There was also a yellow slip that said I had to go up to the [post office] counter- I thought I was in trouble or something (laughs)". He goes on, "I went up to the counter and they had a whole box of more mail for me. I had to ride back home and empty out my backpack 'cause I couldn't carry it all".

Over the next few weeks, the boy continued sending out the E-mail. "The money just kept coming in and I just kept sorting it and stashing it in the closet, I barely had time for my homework". He had also been riding his bike to several of the area's banks and exchanging the $5 bills for twenties, fifties and hundreds. "I didn't want the banks to get suspicious so I kept riding to different banks with like five thousand at a time in my backpack. I would usually tell the lady at the bank counter that my dad had sent me in [to exchange the money] and he was outside waiting for me. One time the lady gave me a really strange look and told me that she wouldn't be able to do it for me and my dad would have to come in and do it, but I just rode to the next bank down the street (laughs).

" Surprisingly, the boy didn't have any reason to be afraid. The reporting news team examined and investigated the so-called 'chain-letter' the boy was sending out and found that it wasn't a chain-letter at all. In fact, it was completely legal according to US Postal and Lottery Laws, Title 18, Section 1302 and 1341, or Title 18, Section 3005 in the US code, also in the code of federal regulations, Volume 16, Sections 255 and 436, which state a product or service must be exchanged for money received.

Every five dollar bill that he received contained a little note that read, "Please add me to your mailing list". This simple note made the letter legal because he was exchanging a service (adding the purchaser's name to his mailing list) for a five dollar fee.

Here is the letter that the 15-year-old was sending out by E-mail, you can do the exact same thing he was doing, simply by following the instructions in this letter.

* * * * *
Here are instructions on how to make $10,000 US cash in the next 2 weeks:

There are 3 addresses listed below.

Send the person at the top of the list a $5 bill wrapped in 2 pieces of paper (to securely hide it), along with a note that says: "Please add me to your mailing list".

If you live in the UK and the address at the top of this list is a United Kingdom address, please send a £5 note instead to the recipient as this will be easier and cheaper for you than obtaining a $5 bill. It would cost about £7.50 at current exchange rate and thats not including any additional charges made by the bank/post office/travel agent you use to exchange your UK currency to US currency. This makes it easier for you and the person at

the top of the list to earn cash quicker.

Then delete that name, move the other 2 up and put your name at the bottom.

Now start sending this ENTIRE e-mail back out to people.

When 20 people receive it, those 20 people will move your name up to the middle position and they will each send out 20. That totals 400 people that will receive this letter with your name in the middle.

Then, those 400 people will move your name up to the top and they will each send out 20 E-mails. That totals 8,000 people that will receive this E-mail with your name at the top and they will each send you a $5 bill.

8,000 people each sending you a $5 bill = $40,000 cash. That's if everyone responds to this E-mail, but not everyone will, so you can expect more realistically to receive about $10,000 in cash ($5 bills) in your mailbox.

This will work for anyone, anywhere in the world in any country.

The more E-mails you send out, the more cash you will receive. If each person sends out 100 E-mails, there will be 1,000,000 people that receive this letter when your name reaches the top. If only 1% of those people respond, you will still get $50,000 cash.

* * * * *

Here is the list:

1. Chris Cole
PO Box 27
Canton, Ohio 44707

2. Paul Matthews
320 Carterknowle Road
Sheffield, UK
S11 9GB

3. Ian Leask
9a Pitt Lane
Lerwick, Shetland
United Kingdom
ZE1 ODW
* * * * *

THERE'S NOTHING MORE TO DO. When your name reaches the top in a few days, you will start receiving $5 bills from other people just like yourself, who are willing to invest a $5 bill to receive $10,000 cash.

Stop dawdling and get a move on before you run out of time...

Hi, I just put up my 2-6 meter antenna and I have a quick question. I need to run a wire from the antenna to the copper ground rod. I found some good thick copper wire, which is not insulated, and I found some even thinker galvanized wire (the silver colored kind) which is insulated with thick clear plastic. Which wire would be best for connecting between the antenna and the copper ground rod? If anoyone could please respond, I would appreciate it. Thanks,

-Pete

Probably the copper, depending upon the gauge.
Also look at the end of the galvanized wire, and see if it might be
tin or other plating over copper.
In any event, you may wish to consider a switching arrangement to
disconnect the antenna from the rig during electrical storms.

I'd suggest that you get a better radio than the 350mW mini. After all you want to access more repeaters to find more friends. Besides, radio manufacturer's map changed since you were 14. Yaesu and Standard merged, Alinco's electronics division is under restructuring, so be careful on what brand you buy.

Kenny

Dear OM,

On the members only side of the ARRL I learned that QST publised an article regarding a way to improve the reception quality of the Kenwood TS-450S. The article is however not on the ARRL webside.

As an TS 450 user I would very much appreciate a scan (by e-mail) of the following page:

QST July 1994, page 80.

I realy hope that somebody is willing to scan the page for me!

Thanks in advance,

73, de Peter PA5KE

5421. FS: Radio Shack DSP Unit

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-27 00:00:00 UTC
From: Rich WU6T <wu6t@earthlink.net>
Message-ID: <8Fcq5.1136$p5.24709@newsread03.prod.itd.earthlink.net>
Source record: 72900
Cross-posted to: alt.ham-radio.marketplace,rec.radio.amateur.equipment,rec.radio.swap

Radio Shack model 21-543 DSP unit. Used once. Complete with all original cabling and documentation. Requires 13.8v. DC.
This is a computer controlled digital signal processor with a built-in audio amplifier and speaker. It is designed for use with all communication receivers including ham, short wave, HF marine and CB radios. The DSP circuit dramatically reduces heterodynes, and reduces background noise from incoming signals.

Asking $35.00 plus $5.00 shipping.

73 de Rich WU6T in Sherman Oaks CA.

Cliff, there are a number of repair and calibration shops around. We
have dealt with Conneticut Calibration with some sucess. The 2465 and
2465A have been out of production for quite some time and parts may be
all but impossible to find. Beta Lambda Instruments does offer a trade
in for these instruments toward a new Tek scope. check www.blii.com for
more information.. Roger

Source record: 72906

Yes !!

I am after Broken, Scrap, Damaged, or just simply unworking UHF / VHF Maxtrac or Radius Mobiles. GM Series too: . Prefere ones with a 16 pin logic board that have been taken out of service, but 5 pin versions OK too. These are going to be used as VLSI / SMC componet tranning purposes, so the boards should be as close to factory original as possible, Closer to being Factory original, MORE CASH.

OLD 800 Mhz Analog Radios too !!

So turn that old Scrap into cash....

Please feel free to email with what you may have. I have lots of ~/\/\~ stuff to trade as well

Monty

Well I must say I will never purchase anything from Scan... Not because Dean is unhappy but because of his replies to dean and the group as a whole. Not the kind of person (I use the term loosely) that stands behind what he sells but makes excuses. I'm sure nothing is ever his fault, it is always the other guy that did it.

ICOM T-22A HAND-HELD

2 meter 5 watt transceiver (Hand-held)

4 to 16 VDC input range
80 memory channels (40 with Alpha Display)
Covers 110-136 MHz AM and 136-174 MHz FM
Wall charger transformer
Includes BP-180 (7.2 VDC at 600 mah NICAD)
Also includes MH-BP-173 (9.6 VDC at 650 mah NiMH)
Includes antenna (BNC connector) and Instruction Manual

See review in QST page 68 May 1996

Very clean and scratch-free, some wear on the H/L power button

All this for only $150 including shipping to your front door.

5450. Alinco Troubles

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-27 00:00:00 UTC
From: Frizz <senorpurpl@hotmail.net>
Message-ID: <8och2h$7vt$1@bob.news.rcn.net>
Source record: 72929

I have an Alinco DJ-C5 for a backup and 440 radio. The only problem is when I try to use the radio while it is on the charger, the charger wipes out all VHF communication. Could I just build a 12 to 4 volt converter to get rid of the noise caused by the charger (the battery yields 4 volts anyways and I have several of these little chargers). Any ideas as to how I can use this thing on full charge/power and still have my "ears"? Thanks!!

HI,
I have a near new Magellan 2000XL 12 channel GPS unit for sale.
I hardly ever used it so it must go.
Comes with Soft case, lanyard and owners/operators manual
$100 plus a few for shipping

reply to:
gbaker@pacifier.com

Here is more info on GPS
****
****
Affordable and easy to use, the GPS 2000 XL is "Everyone's" GPS. Featuring a 12 parallel-channel receiver, the GPS 2000 XL offers amazingly fast satellite acquisition and tight satellite lock under the toughest conditions. Equally impressive, the GPS 2000 XL will last 24 continuous hours on four AA batteries. The 10-ounce unit fits in your pocket, yet it will take you anywhere you want to go and back again with the push of a button. Seven navigation screens show your position, direction, speed and progress, or use the plotter screen for the total picture. Ruggedized with wraparound rubber armoring and scratch-proof display, the GPS 2000 XL is shock-resistant and waterproof.

Designed especially for the outdoor enthusiast, the new DATA CAPABLE GPS 2000XL has most of the features previously found in the GPS 4000XL and GPS 3000XL (only external antenna capability is not available). On-screen instructions make operating the 2000XL a snap -- even for newcomers. Just scroll through its seven navigation screens for your position, direction, speed and progress. Or use the GPS 2000XL's plotter screen for the total picture. The "Go To" button guides you to any of 200 user-entered locations -- hot spots, drop-offs, bottom structures -- instantly. And for a quick reference, each NAV screen has a helpful directional arrow to steer the way.
****
****
Magellan GPS 2000 XL Features
7 easy-to understand, graphic navigation screens to guide you
2 customizable navigation screens and easy-to-use on-screen menus
12 parallel channel receiver with shielded electronics for better reception
Position coordinates: LAT/LON, UTM, MGRS, OSGB, TDs, plus Finnish, Irish, Swedish, Swiss
Satellite status screen
"I'm here" feature lets you transfer coordinates from GPS to a map
200 user-entered waypoints

5 routes with 20 legs each, reversible and editible
72 map datum plus 1 user defined.
Waypoint projection and nearest landmark search
Backtrack feature
Adjustable-scale moving-map track plotter displays your progress in real time
Sunrise/sunset/lunar calculations
Auto position averaging
Back-lit display for night use
Data upload/download w/ optional PC kit.
NMEA 0183 output (versions 1.5 2.1). DGPS ready RTCM 104 (in) .
Up to 24 hours continuous battery life on 4 AA alkaline batteries
Rugged, armored rubber housing with wraparound grips. Waterproof.
Scratch-proof display
Pocket-size, lightweight (only 10 ounces), 6.6" x 2.3" x 1.3"
Operating Temperature Range: 14 F to 140 F ; -10 &#65533;C to 60 &#65533; C

5454. Re: Yaesu FT-8100 vs Icom IC-2800

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-27 00:00:00 UTC
From: The Dude <>
Message-ID: <jcmjqsoeb0gsp8cl1j2fan8c6g5fmscmtt@4ax.com>
Source record: 72933

I found these comments in a few reviews on the 8100 can anyone confirm
or deny.
""1. Outside hamband frequencies ranging from 108-134mhz on the right
side will cause the last three digits to flicker, also frequencies in
and around the 1.25 meter range will cause this. The last three digits
of the left side will also flicker when you get up in the high 400mhz
frequencies and above. According to Yaesu this is due to the left side
being designed mainly for VHF (due to transmitting restraints) and the
right side is primarily for UHF. In the ham bands it doesn't matter
which side is VHF or UHF it works flawlessly.

2. In VHF/VHF mode while scanning memories on the right side, and with
the left side on a fixed frequency (in this case 146.520, 146.580,
146.865) at intervals of scanning on the right side the left side will
break squelch just enough to drive you up the wall, unless you crank
the squelch way up. ""

""I have now used the 8100R for several months and find it overall
easy to use.
Programming is pretty easy from the get go.
HOWEVER! the receive on out of ham band is somewhat flaky and
particulary down in the AM part of the band around where you would
expect to find some public service and air frequencies.
This only happens on the right hand side of the display and when it
goes below about about 128.000 - 134.000 the last three digits of the
display start to flicker and you start to hear things that you do not
expect to hear!
I have asked Yaesu about this and they say, "That side of the radio is
not dedicated like the left side to the two meter band and the area
that is giving the most problem is out of the Amatuer bands".
This from a fully reversable vhv-uhf rig! ""

I have 1 of the type M68729 class C (i.e. FM) 30 Watts out average, 40 Watts max. These will replace older M57774 modual just fine. The input drive is 300 mW for 30 watts out. I am asking $50.00 including shipping to conus for them. RF parts wants around $70.00 for the same.

These are brand new never been used and still have the one inch leads on them.

Thank You,

Bryan Fields, KB9MCI

Dont forget that today's silly "cell phones" are based upon ham repeater towers that have served them well for decades prior to the development of cell phones in cars, then portable phones using the same technology.

And, Hams are always working on new inventions, too. Laser communication is being developed even now by many hams. Bouncing beams off clouds, dust particles, and even the moon has brought about new ideas and new inventions.

Laser towers are now transmitting the net to homes with receivers on their roofs. What does the future hold using even this technology? Who knows! But we know that Hams will be on the cutting edge of future communication technologies!

Message-ID: <20000827083813.17684.00000098@ng-fp1.aol.com>
Source record: 73033

Hello,
Does anyone know how to hookup or make the Tandy 300bd modem decode the wx data I hear on my 2meter frequency? I know TONS of people have done it and still do. What is required to make the modem decode the data? Can I run a basic terminal program like Telix or Telemate? Do I have to make a special cable for hooking it up?

Any help will be great!!

Thanks and hope to hear from someone soon....

Chris- a few comments re your post, and your listing on ebay.

Why do you add all the 'Mickey Mouse' java and background to your listing?- It only adds to the download time and adds NOTHING to the content of the listing.
After all- you already have someones attention, or they wouldn't see it in the first place. such tricks only turn me off from looking at anything else you have there. THe download time on your listings was significantly more than for most simple- straight-forward items.

just my opinion- Bill-W4BSG

I have a 8100 and think it is the best dual band radio I have ever seen. With the detachable front panel kit makes mobile mounting a pleasure especially if you have a newer type of car or van. The radio has more features than I will ever use but it is nice to have them if I ever want. I have never used the Icom rig you mentioned but it would have to be one heck of a radio to beat out the operation and features of the Yaesu. I'm sure that you will get the Icom folks saying good things about the Icom rig but from my standpoint I would buy another 8100 in a heartbeat.

5474. HTX-242 REVIEW!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-27 00:35:17 UTC
From: k8cpa@arrl.net
Message-ID: <39a8601e.22720732@netnews.att.net>
Source record: 73024

Hi All,

I posted this a while back, thought I'd repost it again...

here goes:

Hi Guys and Gals.

I finally figured instead of spending over a grand on a Kenwood
TM-742AD, and going to a freinds house and really getting a good look
at one of those radios. and thinking, "I'm not putting that nice of a
radio in my car!" I decided to go out and get a monoband rig for
now...

Alrighty, Now that I go that out.... Here's the review.....

(Drumroll here)

Radio Shack HTX - 242, An Independent Review
By Charles Adkins - K8CPA - Ham Radio/Internet junkie at large (okay
now no fat jokes... hihi)

I picked up my 242 on the 24'th..... I went originally went to the
Store in Southgate, Mi as I'm very freindly with the manager, Mitch,
over there. I walk in..... "hey Mitch, I wanna buy a radio!" I say...
and I tell him which one I want. Mitch says, "I don't have any here."
But they've got two at the Lincoln Park Store..." and off I go...
"Thanks Mitch..." and I make a mad dash to the Lincoln Park Store, By
this time the $350.00 in my pocket is really starting to burn a hole
in my wallet. Anyhow, I get to Lincoln Park Store, Randy, The Manager
is there... "Can I help you?", "Yessir, I'm the one who called on the
2 meter radio and you supposedly have 2 here!" "I was afraid you'd
say that, my computer says I have two, and I thought we did have two,
but I went back in the storeroom and there ain't none back there. BUT!
I've called the dearborn store and they got one, so, If you wanna hang
around here for about a 1/2 hour. I'll run and get it... (it was only
about a 20 min wait, he must have been flying down the road!)" and I
said sure... so, 20 mins goes by, and here he comes, while he was
gone, me and Dave one of the sales guys, whom I've known for a LONG
time... who also was a manager at the riverview store (before it
closed) talked about everything under the sun, He also recommended a
good external speaker and a heavy duty noise filter, (to get rid of
the alternator WHINE, that Ford's are famous for... I got a '84

Marquis, and can she ever whine!) and so, I got the stuff and brought it home... pulled in the driveway. Proceeded to clean the ol' car out... Mom commented, "I've never seen him clean a car out, so fast in my life!", Anyhow..... I got the car cleaned out, first installed the noise filter, I already had some 4 gauge wielding cable hooked up directly to the battery, that I bought from a freind a few years back, double shielded, Green as a gord! but can deliver the power with no problems at all.. I installed the filter, went in without a problem. I had to do a little "hillbilly" wire stripping... (you know, a kitchen knife.. and your own front teeth.... hehehe) but all in all, it went together without a problem. Next came the radio. I will forever be amazed as to how in the world, they are able to pack so much stuff in such a little box. it boggles MY mind. hihi... I spent 20 mins taking everything outta that box to get to the power cord! Anyhow... once I got to the power cord, I hooked the red or hot wire to the blue wire on the filter, and got everything taped up. then I brought the radio out of it's plastic... "Boy, these radios sure have gotten tiny" I said to myself, chuckling... as I was unwraping the radio... (got to consider, the radio I was using before was a kenwood TR-7930, that was beat all the heck and back... but it works! and that radio was built in the early 80's... she was about 21 or so years old...)

Anyhow... I got the radio unwraped, and found the mounting bracket... my next question was, Where in the heck do I mount this thing... anyone who was owned a '84 mercury Marquis, knows what I mean... I finally found a spot, which I liked and could tolerate. so, I drilled into the carpet. and got the bracket installed and then I hooked up the radio. Man, things have changed, now radios have pig tails for the power and antenna leads... interesting..... hooked the antenna up (a radio shack 5/8 wave mag mount... for 2 meters. works good.) and the power cord snapped into place. presto! she's all hooked up.

so, the moment of truth has come, I whispered a few words of prayer... and hit the power button..... and I was greeted with a 6-tone beep. and a VFO on 146.000. I chuckled and said, "good afternoon to you too....." hihi... and promptly grabbed the owners manual and began the programming process. Programming the HTX-242 is very easy. the manual is very easy to understand, so, unless you're a complete knuckle-head, you should be able to figure it out... I will warn you. there's alot of button pushin' involved, so, if you ain't into the button pushin', I have a used 7930 for sale.. cheap! hihi

There's a quirk in the radio, that I really, really, really, need to mention to everyone. if you attempt to tune below the lower (and possibly the upper?) limits of the radio abilities... you are greeted with a "PLL ERROR" and constant beeping, that would drive Pope John Paul II into the Wacko Ward! and the only thing that will stop it is a CPU reset! I found out this the HARD WAY! (but, of course!) and my hours worth of programming was trashed... but it gave me a chance to redo my programming a little differently... so, it all worked out...

Okay, now for the performance part, please keep in mind, I am not a rocket scienctist. (don't believe me, go look at my picture on my web site. hehehe) I'm simply giving you my observations on the radio. I don't have any measured data on the radio, I leave that sort of stuff to CQ, QST, and others. I'm just giving you, an Everyday joe-blow's review on the radio.

Transmit is great... I can key MOST of the repeaters in the area. I tend to believe if I was running a comet or a diamond antenna, my performace on transmit would be a little better, but I could very wrong...

Recieve is second to none.... I can hear very well on this radio. alot better than the kenwood I used to run.

Rejection. Now this is where R/S needs to work on.. they've just about got it. but it needs a little bit more tweaking..... I tend to pick up alot of inter-mod when I'm near downtown detroit. I get the usual pager intermod, but where my old kenwood became, at times, unless on some frequencies, my R/S radio was able to still pick up the repeater in question, but with alot of inter-mod in the background... (which I tend to beleive is the norm on most new radios.) also, when I'm in my driveway, I am picking up my freindly neighborhood leaky cable system! I tend to believe that's due to a extra hot reciever and a very leaky cable system... hihi..

Okay, the bottom line.....

for the price, you get a high quality radio, that is up there with Icom, Kenwood, and Yaesu...

Radio Shack offers a 3 year Service Agreement for $59.99, get it, it's a gamble, yes... but worth the investment...

Overall, I'm pleased with the radio, the things got 40 memory channels, I've used like 20 of them, and that was adding ohio repeaters too! and 3 from canada!

so, if you're in the market for one of these, go get it... it's worth the money...

73's and enjoy!

K8CPA - Chuck

The figures I quoted came from the manager who runs our electronics lab, and does all of our PCB layout work. He wants to change over from through-hole to surface mount designs, and the cost savings was a major factor in his cost analysis. I would suspect any differences you see has a lot to do with the volume of each part used, and your contract arrangements with your suppliers. At least for us the numbers are correct.

Perhaps that is permitted in Holland which
is where this message originated. Or
perhaps he knows that those amplifiers
when enabled for 10M also will work on 11M.

It was also obvious that English is not his first
language but perhaps in your zeal to enforce
American regulations on the entire world you
missed these little clues.

2 meters (has extended coverage for TX/RX: 130.000 MHz thru 163.995 MHz)
20 channel memory
CTCSS tones (encode/decode)
Three battery packs:
7.2 VDC battery pack with 9 VDC wall charger
9 VDC battery pack (uses above charger)
12 VDC battery pack with 12 VDC wall charger (this is 5 watt
battery pack)
Belt clip
Hand strap
Rubber Duckie antenna
Instruction manual
Very clean with very little wear on keys
This is a very nice rig for the money
Only $100 including shipping to your door

Interested in buying a good, clean, used (but not used up) Yaesu FT-902DM
radio and accessory items for that line. Surely someone has one of these
fine hybrid radios that is playing second fiddle to that newer radio you use
as your main rig. Here's a chance to get some cash for that second radio
that's not getting the attention it deserves.

Tnx & 73

I'm looking for 2 CTCSS boards and 3 tone modules for the Motorola EXPO handhelds.

The numbers on the Expo CTCSS board I currently have are: NLN7166B and 5251501.
The number on the radios is: H24XPB3120A

The tone module frequency needs to be 136.5hz.

Any help will be most appreciated.

Please e-mail me directly at the address below.

Thanks!

5510. IC-04E, FT-73R, TR-9130

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-28 00:00:00 UTC
From: Sillyman <sil-@hetnet.nl>
Message-ID: <uV#nhjTEAHA.236@net003s>
Source record: 72978

Hi,

I hope someone can help me. I have looked
around two the "modification" websites
(QRZ and www.mods.dk) but have found
nothing there.

I've already posted this request in
alt.ham-radio.mods, but without any luck.
Reading through alt.ham-radio.mods shows
it to indeed be a news-group for people seeking
modifications to radios. However there is,
of course, little reason for people who have figured
such modifications out, to read it. This has
a kind of forlorn logic to it.

I have an old IC-04E handheld. While this is
indeed the "European" version (430-440 MHz),
the only frequency step options are those of the
US model. The step choices are 5, 10, 15, 20,
and 25 KHz. According to the specifications on
SM7VHS's website, the steps on the European
version should be 12,5 and 25 KHz. Does
anybody know if it is possible to change this?
If "yes" how is it done?

The same question applies to a friends FT-73
which also steps in 5, 10, 15 etc steps. He is
in ZL and would like to modify the radio to
use the local repeaters which 12.5 MHz
channel separation.

Lastly, does any one know if the Kenwood TR-9130
2m rig can be modified to cover 144 - 148 MHz (region 3)
rather than 144 - 146 MHz (region 1)?

Alternatively, if anyone knows of a site where I can
find on-line schematics for these radios, I would
be pleased to have that. I could then, perhaps, work
it out for myself.

Thanks

Sil PA3HIL@amsat.org

He didn't miss a thing. As you should know, by international treaty, the 11 meter band is local, without amplification. The guy's fault is that he posted it to a group that has had it up to here with guys encroaching like poachers into 10 and 12 meter bandwidth.

Some folks don't like MFJ stuff, but I got one of their dual-band mag-mount mobile antennas that looks like a big cell phone antenna (can't remember part number) & it works fine for me. I've had it for about three years w/no problems. I can't remember how much it was, but I believe it was pretty inexpensive.

My husband and I both want to partake in HF contests from our home here. We are mainly using long wire antennas. Is there any way that we can run the 2 radios at the same time? Do we have to be on different bands always or is there any way we can be on the same band without causing interference or damage to the other radio? Does anyone else have this dilema? How did you resolve it? How do contesting stations do it? Any help would be greatly appreciated!! Please email me directly at: N9YLN@aol.com

Source record: 72940

I will try to make some general statements:

1. Forget about both radios on the same band, the interference will be aweful

2. Separate the antennas, and use different polarity. (IE one vertical,
one horizontal, or one east-west the other north-south.) If you have
both radios at the same place and are using long wires starting from the
same place I think that you are out of luck. However, if you could
separate the radios by a few hundred feet that would help a great deal,
although less convenient.

3. Consider filters. An antenna tuner (LC network) could act as kind of
a filter to reduce interference.

4. Limit your power to reduce interference.

This may be a trial and error thing to get the interference down to a
livable level. The big gun stations have this resolved, although they
obviously do not resort to step 4. For VHF contests, we use bandpass
filters, and do not generally have problems.

Message-ID: <Qpkq5.117$n51.15020@news7.onvoy.net>
Source record: 72941

Icom really missed the boat on this one. It does not do dual in band receive. This feature is essential to me and most others. It allows you to constantly monitor one 2 meter freq. while scanning the rest of 2 meters. Also, its scan rate is pokey like older radios. Compare this to the 8100 with 26 channel per sec scan and it being the only rig with intermod protection built into the IF stage. The video feature of the 2800 are neat but for overall performance, the FT8100 is noticeably superior. The Icom IC 2710 was a better unit than the 2800 but its scan rate was only 8 channels per sec.

I think he means a personal communications service, like citizens band. Of course, with the recent action to eliminate all challenges to becoming licensed by Kenwood and others, it looks like its headed in that direction.

Actually, today's cellular telephone was based on an older technology
called IMTS, which was based on MTS, which was based on earlier police
communications and broadcasting. That can be traced back to the
experimental work by Marconi, Hertz and others.

I dont believe that ur radio was ever designed to work while in the
charger!. There is a Lithium-ion battery inside, and I wouldnt try to charge
it with anything other than the charger designed for the battery type.
So learn a little patience!. It takes less than 2 hrs to charge my C5 from
an empty state.

Dennis:

Sounds like your charger is using current pulses which is high
efficiency but high in RFI content. A slow charge wall charger might
be quieter, or you could try filtering the power chord and shielding
this section.

SIMPLEST solution is to use an external antenna while charging the battery. Having an antenna a few feet away should yield a significant reduction in noise. It can be as simple as a 19" magnet mount/groundplane or dipole near your closest window.

Greetings:

I have an MFJ 9406 6 Meter Rig for sale. I have the 20 Meter version of this radio and it's great! This rig can be run off of a battery pack sold through MFJ or a home brewed pack for great field operating. I am cleaning up my shack for a move to another part of the house and just don't find myself using this radio enough to warrant keeping it. I'm asking 150.00, which includes USPS Priority Mail Insured Shipping. Payment may be made in the form of a check, money order, or PayPal. Please e-mail me direct for photos and further information.

Thanks,
Joe

Hi,
Anyone have a schematic and can tell me the mic pin out for the
TM-x61A series rigs. Assume this would be the same as any of the
kenwood mic plugs that use the MODULAR RJ-45 mic connector.
Please also tell me if pin 1 is with the cord itself "coming toward you"
or "going away from you".

Yes, need to wire up an external desk mic as the hand mic has broken
within
2 weeks of ownership.

The manual, while available in English, Japanese, Spanish, French,
and German, fails to give a mic pin out and fails to include a
schematic. (duh....)

Thanks,

Joe DU1/K7JOE

ALINCO DJ-580T handheld---$175

Dual band, receives both 2 meters and 440 MHz simultaneously
Covers AM (RX) from 108-130 MHz and FM (TX/RX) from 130-170 MHz and 415-470 MHz
Will also receive from 810.000-998.9875 MHz

Comes with antenna, handstrap, instruction manual, and schematic diagram
Comes with EDC-24 tabletop drop-in charger
Has EBP-28N, 12 VDC at 700 mah battery (NICAD) to give 5 watts output power
Also will give you the ESC-17 soft case (for a shorter battery than the EBP-28N).
Original box included. Will double box for shipment.

Very clean with no dents or scratches. Some wear on the ALINCO logo but key pads are clear and fine.

Asking only $175 including shipping to your door.

Hey Joe,

Sorry to hear that your mic failed. I've had mine for several years
and have never had a problem with it (in mobile service, in the Texas
heat to boot!). Isn't the mic covered by the warranty?

You can purchase a RJ-45 to 8-pin adaptor from Kenwood to allow you
to use a standard 8-pin Kenwood mic with the TM-261A and others. I
bought one for my TM-261A so I could use my MC-80 desk mic with it.
They cost about USD $30 or so.

I'm looking for any parts or accessories for the Icom IC-901 radio. I believe the modules also fit the Icom IC-900 series. I'm looking for the following modules:

UX-19A/E 10 Meter Module
UX-59A 6 Meter Module
UX-129A/E 1.2Gig Module
UX-S92A/E 2 Meter SSB Module
UX-R91A/E Wideband Recieve Module

If you have a 901A or 900 that has bit the dust and you have ANY parts/pieces for sale, please contact me, I may be interested in buying them from you.

Thanks

Howdy Dean!
Thanks for the tips. Guess it is covered in warranty, but
the problem is getting anything fixed here in Manila, Philippines
Thought it would be easier to just
wire up an old Shure 444 that I have laying around. I dont use
the touchtones or up/down anyway on the hand mic.....

I found a 6 foot run of ethernet cable that's shielded
and already has a RJ-45 on one end, so all I need to do is wire
a couple wires to the PTT switch, and another couple to the mic +/-.
Who knows. May even be common ground from the ground side of the mic
and the low side of the PTT switch!

Daniel,

Yes, the CT-17 is simply a TTL to RS232 convertor. I homebrewed one from a schematic I found on the web. However, the CT-17 goes one step further by allowing four Icom radios to be connected to the same serial port at the same time. By doing this, you can share one comport between all four radios and operate each radio independently or you can tune each radio at the same time to the same freq. I was fortunate to find a new CT-17 with all of the cables at a local hamfest for $25 so I gave the homebrew to a friend.

Goto www.icomamerica.com and you'll find a link for the control software. Works nicely on the MKIIG.

Mostly a level converter. Look here for some info on various
interfaces. That $ 100 or more is way too much for a couple of bucks
worth of parts.

Actually I prefer a little bigger radio in general, say TS-450 sized
etc. But between those two, I'd probably go with the 706. Not that the
100 isn't good, I just don't know much about it, where I'm fairly
familiar with the 706. The 706's are a fairly bulletproof little radio
by what I've seen so far. And I think the newest model has better
transmit audio than the original 706. I can't tell you much about the
ft-100. Never have tried one yet. MK

There are quite a few. The AL-80's as mentioned a good choice. It's rated for 850 watts, but you'll never tell the difference on the air between 800 and 1000 watts. The old heathkit SB-220/221 can still be had fairly reasonable I think. The henry's are good. Kenwood TL-922, etc, etc. You can get a real nice amp for a kilobuck.
I have a henry 2K Classic that I bought a few years ago for 900$. And thats kinda on the high end for a used dual 3-500 amp. You can get a SB-220 I bet for 400-500-600$ or so at a hamfest. I've seen some cheaper than that that needed a little minor work. You also have the solid state angle, but getting s full KW from transisters for a 1000$ will be tuff considering you'll also need a big power supply also. Those AL-80's and newer versions of the same a cranking little amp for a single 3-500z. I hear many that get 1000w from them when they drive them full out. But I'd prefer to roll it a back a bit myself, I'd have to look at the grid current...My henry is a console. Kinda like a linear welding machine. It'll do 1300-1400 watts output with a normal drive level. As you can tell, I'm a fan of the 3-500z tube...g They are cheap and hard to kill.

> for a lot of frustration.

Nothing wrong with a vertical, it's just many people don't apply them
properly for the paths used, and neglect the ground radial systems, etc.
For dx, the verticals do great,but will usually be fairly lousy for
close in stuff on 75m or 40m in the day. My full size 40m/17m ground
plane at 36 ft, does appx 4 S units better to Australia than my dipole
at 36 ft on 40m. On 17m it was by far my best antenna compared to the
other wire antennas. Many times on 10m, a good 1/2 WL or 5/8 WL antenna
does about as good as anything except a beam.
>
> Further, the commercial vertical antennas are overpriced and inefficient.

> high to get the high voltage lower end well off the ground. And with
> radials, you will still take a back seat to the signals with dipoles and
> yagis and quads.

I agree here. Very few are nearly as good as a normal full sized
vertical. And then to add insult to injury they usually mount them on
the ground with few radials. But again, just depends on the path you are
talking as to which is better. On 40m, a dipole is usually better close
in within 300 miles or so, but at night it all changes. The vertical
equal at 500-700 miles and at 1500 miles, better by 2 S units. So it can
easily beat the dipole, unless it's mounted very high, but the yagi's
and quads will eat the verticals up on long haul DX. Unless maybe you
phase more than one vertical...

>
> I strongly recommend that you find a way to string up a dipole or two. You
> can put up an inverted vee with a single support, and let the ends droop to
> any convenient tie point. Not the best antenna, but superior to a vertical
> antenna.

Well, superior to the average multiband vertical sitting on the
ground...But I agree, one should always have a dipole even with the
others. The dipole is always the first antenna I would put up. Then the
verticals later...And I make my own. Much cheaper than the premade
versions. MK

Well I should have known not to talk back to a netcop.
Keep that Ugly in Ugly American.

There is no question in my mind he was interested in an
amp that had 10M enabled for ham use but then I try to see the
good in people life is much nicer that way; you might try it.

As an exercise for the student why don't you explain all this
to him in Dutch after all he made the effort to post in English
it would only be courteous

Check your history or radio. It's a documented fact, David.

: Ive never known that police could dial a phone from their cars years ago when hams
: were doing it all day long!

Police department pioneered repeater technology as we know it today. Prior to that, they used frequencies just above the AM broadcast band, although antennas proved to be very cumbersome.

Repeater technology was later adopted by the telephone companies for modile telephones. Initially, one had to call the operator of their radio, then five the telephone number and billing data by voice. This method was still used by VHF marine operators, until that was finally phased out as boaters began installing cellular telephones on their vessels and cellular converage extended into the Gulf (sites were located on oil rigs, with service beamed offshore by mictowave or satellite).

MTS and IMTS in initially used the old Z Band frequencies (35 MHz base, 43 MHz mobile). Later they migrated to VHF-Hi Band (152 MHz) and UHF (454). Cellular on 800 MHz debuted on the early 1980s, and was based on the principle of dividing the geography into small cells in which frequencies would be reused many times over. This was necessary because of severe overcrowding. In the late 1970s, there was a seven-year waiting period to get a local number, and a ten-year waiting period to get a wide-area number. In Houston, there were only four VHF IMTS channels, which meant only four conversations could occur simultaneously.

Please refrain from asking any further questions about something you know nothing about. You only make yourself look extremely stupid.

In article <8oho6v$qi5$1@nnrp1.deja.com>, kr4vp@my-deja.com says...
>
>I am trying to go mobile with HTX-10 rig. problem is severe ignition
>noise. Anyone been able to quiet down this truck?

My F-150 also exhibits a rather high engine noise level. I'm not sure whether it's ignition noise or noise from the electronic fuel injection, but the amplitude varies a lot depending on engine RPM. At idle, the noise is hardly there, but under hard acceleration, it runs about S-9. The noise blanker in my Alinco DX-70T knocks the noise down to S-1 even under the worst conditions, so I haven't bothered to spend any effort on noise reduction. The atmospheric and man-made noise in the areas where I do much of my driving is typically S-3 to S-5, so an S-1 engine noise level is really of no consequence. Out in the sticks where there isn't any man-made noise, S-1 is still not worth messing with.

I can suggest some standard things to try which might help you knock down the noise, and improve general mobile performance. Make sure all body panels and the cab are adequately bonded to the chassis. I have noticed that my '98 F-150's hood and doors are not bonded to the cab, and yours probably aren't either. I also noticed that there's only one little bond strap connecting the cab to the chassis. That's not enough. The pickup box is also not bonded to the cab or chassis. Make sure there are bonds from the engine block and transmission case to the chassis. Don't depend on mounting bolts for grounding in a motor vehicle. Add grounds yourself, and the more the better. Always run both your (+) and (-) power leads all the way from the radio to the battery, and do not ground the (-) lead anywhere in between. There is a lot of noise running around on the chassis ground in most vehicles, not only from the engine, but from the controlling computer as well. Mount the antenna as far from the engine as practical, and use good quality coax cable such as military-grade RG-58C/U (not that cheap Radio Shack CB-grade crap). Make sure your antenna is well grounded to the vehicle body, and don't waste your time with mag-mount antennas.

If you do get some good suggestions that deal specifically with the F-150, I'd be interested in hearing them anyway.

I don't know what equipment you are running, but would recommend that
if you have any kind of transceiver festooned with buttons, you keep
it elevated at eye level so you can see them all without having to
hunch over.

Some kind of a boom support for a microphone is helpful as well.
Also, don't forget room for a computer keyboard, mouse, and monitor.

Good luck. I have a 98 F150 and the noise is so bad it comes across my Icom 207 on 2 meters. The RFI that the ignition radiates is horrible. Took it to Ford and of course they can't help. If it's not in the book with step by step instructions there lost.

I have grounding straps running everywhere and it doesn't help. It is coming from the ignition wires. If you take a small AM radio and move around under the hood, you will notice that it is coming from the plug wires. Do yourself a favor and don't try magnetic suppression wires. Didn't help. Jacobs ignition claims they have the cure with there plug wires, but at about $140 for a set for a V6 I want to see some proof.

Like I said, good luck. If you come across something, let me know.

I recently bought a new lanyard for my climbing gear at
http://www.labsafety.com/commerce/default.asp

Used my credit card and had it in a couple of days.
For climbing make sure you get a positioning belt with 2 rings or a full
harness with 5 rings. You need the two waist rings to use with the lanyard
around the tower. KA9CAR

That would be nice and easy, but when the ignition noise is so bad that someone else in there vehicle next to me picks it up, a new radio won't do the trick. AM on the factory stereo picks it up also. I also went to the dealership and asked if I could check the noise level in the stereo on a truck that was on the lot just like mine, and what do you know, the same noise as in my truck. Ford stink when it comes to RFI suppression and you can ask just about anyone that deals with radios and you will probably come up with the same conclusion.

Well, what can I say, mine doesn't radiate anything on either the car radio, or the yaesu 8100, that I can hear. Sounds like something is 'different' from your Ford truck than mine...? What size truck/engine are you using, just out of curosity?

I have noticed a difference between radios in my Ford Windstar. I had an
Icom 2100 which picked up the fuel pump and the electric fan noise put when
I got a Yaesu 2600 and swaped them there was no noise. Your mileage may
vary though.

Incase you didn't see them there are 3 going on ebay.

421128764 Communications Receiver Radio Shack DX-394 $162.50
421689616 RS DX-394 SHORTWAVE RECEIVER W/ EXTRAS $155.00
423918831 RADIO SHACK DX-394 LW/MW/SW Comm. Recever $100.00

The first 2 look a bit steep price wise (although the second has
a usful mod) but the last one looks promising.

: That represents the arrogance common to many older hams. The newer hams want
: little to do with the "old farts" because they are such know-it-alls.

The so-called "newer hams" want to enter the hobby without demonstrating proficency in the radio art (with includes Morse code). The current restructuring is the product of this "gimme gimme gimme" mentality. The League, Fred Maia and Kenwood are out for profit, not advancing amatuer radio.

: Wayne Green warns against these old coots all the time.

"Doctor" Wayne Green is another crackpot trying to squeeze all the profit from the hobby as he possibly can. As an aside, I publicly challenged Wayne to debate me on these points. He backed down, not surprisingly.

I'd be extremely careful buying used climbing equipment.
I won't even use the light duty stuff advertized for the occasional climber.

When I started climbing towers I bought the top of the line, Kline free floating belt and a pole strap of vulcanized neoprene and continuous filament nylon.
That was nearly 30 years ago. The belt and strap still check out fine.

Remember that the synthetics age and deteoriate in sunlight. You have no way of knowing if the belt/harness has been left out in the sun for extended periods, or how they have been stored.

New synthetic belts climbing gear made by well known manufacturers should cost little more than a used one. They are not expensive. The leather/professional ones are expensive, as are the pole straps that are used with them.

5611. Question: Astron SS-30 Switching PS

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-30 00:00:00 UTC
From: Joe <K7JOE@yahoo.com>
Message-ID: <39AE75B7.51B2425A@yahoo.com>
Source record: 72833
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment,rec.radio.amateur.dx

Hi Gang,
Based on an article that I read in QST magazine a while back, and the fact that I needed a light weight PS for DXpedition/travel use, I decided to purchase one of the Astron Switching Power supplies, model SS-30. I got it from HRO last time I was traveling through the SFO bay area.

For those that dont know, this is a 30 amp unit that is very small and light weight. Best of all, it was the only model that QST endorsed as being very good about the hash noise so prevalent with switching PS's.
Also, it runs on either 110 or 220 volts AC, making it ideal for my specific application ..... or so I thought.

Anyway, here's the situation: AC lines here do not offer a ground plug or ground lug as is common in the USA and many other countries. All we have here is a hot wire and a neutral wire on the AC line. The PS itself comes with the standard black 3 wire cord as is common on most computer power supplies (you know the one, I'm sure). I had to use one of those adapters to get it plugged into power (but, of course, had to leave the little ground wire floating since there's no place to ground it....hell, over here, dont even use conduit inside the walls....fire trap, yep).

Now, it works ok but I note lots and lots of hash on the HF receiver. I presume this is due to the PS not being grounded. I also am getting RF into
the PS and the HF rig at power levels above 100 watts. HF rig is an Icom 751A, which was designed to be run from an internal switching PS or an external supply.

Voltage here varies from 210 on the low side to about 240 on the high side.
High spikes happen, but slightly low voltage is more the trend.

Lastly, I note the PS makes some strange high pitched noises at times. These noises are unrelated to the fan operation (which kicks on and off based on temperature). I note this after the power switch is cut off...strange.

Before I chuck this thing and go find a linear PS, I'm wondering others experiences with these little switchers.

I dont have access to things like new gel cell batteries, marine batteries,

etc....So, As a work around, I snagged the old battery out of the diesel van and lugged it just outside the window and am using the switching PS as a battery charger to charge the car battery while operating. The battery provides what appears to be good filtering and the RX hash noise goes away.

Thoughts or ideas?
thanks,
Joe DU1/K7JOE

Dennis,

As you know, it would be difficult to use an external antenna with that unit, and I don't think that would solve the problem anyway. I think the problem is that the power supply is not designed for use under load. I would recommend removing the unit from the charger assembly during use.

I think you should concentrate on getting a good safety and RF ground system. have two of these power supplies, and use them with a variety of equipment receiving from 28 MHz to 800 MHz including 6M, 2M and 70CM all modes. Here in florida by code, my house is wired with a safety ground. In addition, I have a ground window (where all my antenna cables and surge protectors are grounded), in turn, this is bonded to several ground rods including the main house electrical utility ground rod. My results have been favorable. I have no hash that I can attribute to the switchers, my computer is by far the noisiest contributor. If I turn the computer off, things are pretty quiet. I would suggest that you establish a safety ground system for your station and wire the chassis of the SS-30 (as well as your radios) to that common point. I suspect that the fact that the switcher is floating is causing the hash. If you can access the utility ground rod, I highly recommend that your radio system ground network be bonded to it. Failing that, the cold water pipe would be the next choice, provided that it is mettalic where it goes underground.

I don't have any unusual noises coming from my supply, however switchers will make funny noises while they adjust the pulse width. I do not recommend charging a battery direcly from the charger for a lot of reasons including the possibility of overcharging and outgassing (explosion hazard) and the possibility that the switcher may not want to see an external source.

You might call Astron service dept and ask for Fred. He was helpful to me in past.

David,

Why would you consider risking your life with used equipment.

You can buy new Miller equipment at Grainger for very reasonable prices. I paid $71 for a full body harness with chest and back D rings and waist positioning rings. I don't have the invoice handy for the lanyard, but $40-50 is about right.

I understand that Grainger only sells "wholesale" so you might need a friend's business license number, in my case my brother-in-law is an electrical contractor so I used his name.

I'm a real chicken when it comes to climbing, in fact I have a Rohn fold-over tower so I'm never higher than 20' but after having a good friend fall off a 16 foot extension ladder and die, I don't cut any corners.

Warmest regards,

Wes N7WS

Message-ID: <6e1pqs44m6q06ha1idb1gtm9a9eqbpu4g8@4ax.com>
Source record: 72798

Hello, I am in need of a factory service manual, or a copy thereof; I have a 211 that is from 2.5KHz to as high as 19KHz higher than displayed frequency both TX and RX. When first powered up it is right on frequency then drifts the amount previously mentioned; however, once warmed up the drift stops and the unit is stable from there on.

If anyone out there can help it would be most gratefully received, please reply to sulch@gte.net

Thank you,
73s Chuck KG4ESR

5635. Yaesu FL7000 Linear.. Problem..

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-30 06:01:42 UTC
From: Ross Biggar <rbiggar@xtra.co.nz>
Message-ID: <39ACA345.B7EE283@xtra.co.nz>
Source record: 72801

I have an FL7000 Linear, that works well on SSB with my FT767 and/or my FT1000MP.
However when I try to drive it with RTTY or MFSK, it goes into protective mode very quickly.

For example, with 100 watts output from the linear, ie the exciter output is only 25-30 watts, the protective
circuit cuts in within 90seconds, then of course you have to stop transmitting and switch off to reset it. In the meantime, you have no transmission at all, a bit disconcerting for the listeners.

According to the manual, it should output 200 watts RTTY happily.
An amplifier that keeps one down to one minute QSo's is not much use, except perhaps in contests..

Any ideas please

Ross Biggar

That represents the arrogance common to many older hams. The newer hams want little to do with the "old farts" because they are such know-it-alls.

Wayne Green warns against these old coots all the time.

5651. Need advice: "T" vs. "L" antenna tuner?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-08-31 13:13:50 UTC
From: k5dh@raytheon.com
Message-ID: <iSsr5.27$jJ5.4390@bos-service2.ext.raytheon.com>
Source record: 72755

Greetings from insanely-hot and bone-dry North Texas...

In this world of eBay posts, fights and arguments, and the endless stream of non-radio "spam", how's about we get some actual useful radio-related discussion going here?

Here's my question:

What are the advantages and disadvantages of a "T" network versus an "L" network antenna tuner? I need to build or buy a tuner capable of handling up to 1 KW, and I'm open to any and all suggestions.

I have a 28 uH E.F.Johnson roller coil, a Groth turns counter, a pair of huge 250 pF air variables, a pair of National Velvet Vernier drives with giant ceramic insulator rings, a Collins directional coupler/Wattmeter from a military URC-32A 1 KW SSB station, a Heath SB-line cabinet for my enclosure (which will match my SB-200 amplifier), and all the time in the world to actually make those parts into a tuner.

So, let's hear some serious advice, along with reasons why or why not. For everyone's benefit, post your responses to the group, rather than emailing me privately.

73,
Dean, K5DH

The Japanese parent company of Standard Radio (Marantz), sold the standard division to Yaesu. Standard marine & commercial radios were "folded" into Yaesu's "Vertex" line of commercial products & is now known as "Vertex-Standard". The Amateur division, at least in the US, has been "shut off". Yaesu USA dosen't honor any Standard Amateur warranty & no new Standard branded amateur products are expected in the USA.....

With all due respect, any connection Amateur Radio ever had to "the radio art" was coincidental. Certainly some amateurs made very significant contributions to both technology and communications, but the vast majority did little more than enjoy it as a hobby - and there's nothing wrong with that. In the beginning, amateurs had to homebrew their own gear so it was entirely reasonable to expect them to prove sufficient technical skill to do that before granting them a license. That need has long since been overtaken by manufacturing technology that produces $400 transcievers that're far better than anyone can homebrew for thrice the price and its been like that for over 20 years. I had the knowledge to design and build 1960's gear, and aced the General/Tech exam circa 1978, but I'm going to have to do some studying to get the questions on satellites, packet, etc on the new extra test answered correctly. I could built a vacuum-tube rig with hand tools but I'll bet that not one ham in 100 has the equipment to build one from scratch using modern manufacturing methods: a 100w all-band HF rig thats smaller than a CB and does everything but wipe your nose. So we do the sensible thing and buy "appliances" instead. Same goes for code. It's almost as relevent today as wiring up tube sockets or starting fires with flint and steel - fun but hardly practical - and kids who grew up with cell-phones, the internet and other far superior technologies see about as much need to master it as they do to raise their own potatoes. Beyond that, the more things change the more they remain the same: I expect some of these new kids will make significant contributions - not many of them but there never were many - and the rest will continue to enjoy amateur radio as a hobby. Can we quit bitching and get on with it - or is bitching half the fun?

I respectfully disagree with putting the rig at eye level. This would cause your arm to have to be raised whenever tuning the radio. If you ever DX or contest or just frequently tune the bands, your arm will be ready to fall off in just a few minutes.

I use an L shaped desk (secretarial return on the left side) with a shelf on the main desk (available at office supply stores). The return holds the computer, the main desk holds the two radios, and the shelf holds the accessories. Linear is a floor console. A desk linear can also be used if you make the shelf less than the full width of the desk. My QSL card with a picture of the desk can be seen at QRZ.com

After reading your resume, I think you might be trolling, but nevertheless I'll press on....

In the general sense, the L network can match any two values of loads to each other, however, to handle a wide range, the network must be 'reversable', ie, you must be able to have the shunt element switchable to either the input or output side of the network. Furthermore, the network Q is fixed and is determined solely by the values of the two impedances being matched.

If the impedance ratio is tractable and results in a reasonable network Q then the L will be the more efficient of the two.

The T network can be visualized as two L networks back-to-back, with a 'virtual' resistance existing at the junction of the two Ls. In the usual implementation; two series capacitors and a shunt inductor, the virtual resistance must be greater than either of the two impedances being matched.

The advantage of the T is that the 'virtual' resistance and hence the network Q is under our control. This versatility can be a two-edged sword. With three adjustable elements as you propose, there are, technically speaking, an infinite number of combinations that will realize a match. One will maximize the loss and another will minimize the loss; all of the others will be in between. Your problem is to determine which is optimum.

With only a SWR indicator on the input side of the network, you cannot tell which solution yields the lowest insertion loss. Generally speaking, setting the output series capacitor to the highest possible value is the best solution, however, the use of a roller inductor complicates the mix. This is because the unloaded Q of a roller inductor (at least the ones I've measured) varies greatly with inductance setting. So an "optimum" capacitor setting might result in

lower inductance setting that reduces the inductor Q such that the total loss is greater than "optimum."

The best solution (IMHO) is to include an output power indicator and adjust the network for simultaneous input match and maximum output power.

Wes has given you a more thorough answer than I could.

I was taught that a 'T' can match a wider impedance range than an 'L'.
Most all commercial tuners are of the latter. The exception is the range
from Palstar. All their's are 'T' matches and very nice they are to.

Good luck.

Hi to all, I have a old Lafayette HA-600A that works pretty nice for
it's age. The only problem is the RF gain control is in need of
replacement. It has 2 pots ganged up together. The problem is
the pot has some wires soldered to the outer case and
the pot value is covered over by solder. Does anyone have the
schematic or a Sams photofact of this great old radio?
If you can help me please e-mail me direct at:

mrrusso@bellatlantic.net

THANKS, Mark N2FLF

very nice Swan solid state 80-10 (no WARC) SSB/CW transceiver, new power
cord and manual.
Picture available on request.

Original buyer never sent $$. $140.00 shipped CONUS from N.C.
